

Kristine Stanley

Senior Software Engineer | .NET & React & AWS

Coaldale, CO 81222 | kristine.stanley.dev@outlook.com | +1 (786) 949-7561 | <https://www.linkedin.com/in/kristine-stanley-341688411>

PROFESSIONAL SUMMARY

Senior Software Engineer with 11+ years delivering cybersecurity, connected-mobility, insurance, and learning-platform products using **.NET Framework 4.5–4.8**, **.NET Core 2.0–3.1**, **.NET 6–8**, **C#**, **React 0.14–19**, **TypeScript**, **SQL Server**, **PostgreSQL**, **Azure**, and **AWS**; combines API architecture, high-performance UI engineering, cloud modernization, observability, and technical leadership to improve reliability, delivery speed, and customer outcomes.

SKILLS

- **Languages:** C#, TypeScript, JavaScript ES6+, SQL, PowerShell, Bash, HTML5, CSS3
- **Microsoft Development:** .NET Framework 4.5–4.8, .NET Core 2.0–3.1, .NET 6–8, ASP.NET Core, ASP.NET MVC 5, Minimal APIs, Entity Framework Core, LINQ, SignalR, MediatR
- **Frontend Engineering:** React 15–19, Next.js 12–15, Redux Toolkit, TanStack Query, React Router, React Hook Form, Zustand, Storybook, Material UI, Tailwind CSS, Sass
- **API Technologies:** REST, GraphQL, OpenAPI, Swagger, WebSockets, SignalR, Server-Sent Events, OAuth 2.0, OpenID Connect, JWT, API versioning, webhooks
- **Architecture:** Microservices, modular monoliths, event-driven architecture, domain-driven design, clean architecture, hexagonal architecture, CQRS, transactional outbox, backend-for-frontend
- **Databases:** SQL Server, PostgreSQL, MySQL, MongoDB, Cosmos DB, DynamoDB, Redis, Entity Framework Core migrations, indexing, query optimization, stored procedures
- **Messaging:** Apache Kafka, RabbitMQ, Azure Service Bus, AWS SQS, MassTransit, dead-letter queues, retry policies, event replay, idempotent consumers
- **Cloud Platforms:** Azure App Service, Functions, AKS, Service Bus, Key Vault, SQL Database, Cosmos DB, Application Insights; AWS ECS, EKS, Lambda, RDS, S3, SQS
- **Testing:** xUnit, NUnit, Moq, FluentAssertions, Testcontainers, Jest, React Testing Library, Playwright, Cypress, Pact, integration and end-to-end testing
- **DevOps:** Docker, Kubernetes, Terraform, Bicep, Helm, Azure DevOps, GitHub Actions, Jenkins, SonarQube, NuGet, npm, Vite, Webpack
- **Monitoring:** OpenTelemetry, Application Insights, Datadog, Prometheus, Grafana, ELK Stack, Sentry, structured logging, distributed tracing
- **Senior Engineering:** Technical leadership, architecture reviews, mentoring, code reviews, production support, incident response, root-cause analysis, Agile delivery

EXPERIENCE

Veracode Systems Inc — Senior Software Engineer

Remote/ Full time

April 2021 – May 2026

Somerville, MA

- Led architecture and delivery for enterprise application-security products using **.NET Core 3.1**, later **.NET 6–8**, **ASP.NET Core**, **React 16–19**, **TypeScript**, and **PostgreSQL** across vulnerability, policy, reporting, and remediation workflows.
- Replaced tightly coupled controllers and duplicated React state with domain-oriented services, **MediatR**, typed API contracts, reusable hooks, and **TanStack Query**, reducing recurring production defects by **36%**.
- Resolved dashboard freezes and slow security APIs through virtualized tables, cursor pagination, composite indexes, Redis caching, and optimized DTO projections, improving P95 interaction time by **42%**.

- Modernized legacy services from older .NET Core runtimes to **.NET 8**, removing unsupported packages, blocking calls, and unsafe shared state while introducing nullable reference types and asynchronous processing.
- Designed secure multi-tenant APIs with **ASP.NET Core**, OAuth 2.0, OpenID Connect, JWT validation, tenant-scoped repositories, and policy-based authorization to protect customer vulnerability and compliance data.
- Eliminated duplicated findings caused by message retries through idempotency keys, transactional outbox processing, **Kafka** consumer safeguards, and controlled dead-letter replay for recoverable failures.
- Built asynchronous ingestion services with **MassTransit**, Kafka, Azure Service Bus, and bulk database operations, absorbing scanner traffic spikes without exhausting database connections or degrading analytics workflows.
- Created a reusable React design system with **Storybook**, accessible components, design tokens, typed properties, and visual regression checks for complex tables, filters, forms, dialogs, and status indicators.
- Established automated quality gates using **xUnit**, Moq, Testcontainers, Jest, React Testing Library, Playwright, and Pact, detecting API contract and database migration defects before production deployment.
- Mentored engineers through architecture reviews, pair programming, incident retrospectives, and performance-focused code reviews while aligning security, product, frontend, backend, and quality stakeholders.

Cubic Telecom USA — Software Engineer

Remote/ Full time

January 2019 – April 2021

San Diego, CA

- Developed connected-mobility applications using **.NET Core 2.0**, later **3.1**, **ASP.NET Core**, **React 15–16**, TypeScript, PostgreSQL, and RabbitMQ for device, SIM, billing, and subscription operations.
- Improved device-provisioning throughput by **37%** through asynchronous command processing, bounded concurrency, batched database operations, and provider-specific rate controls that protected carrier APIs during traffic spikes.
- Resolved failed activations caused by inconsistent carrier identifiers and incompatible response structures by introducing canonical models, provider adapters, correlation identifiers, and replayable reconciliation workflows.
- Designed versioned REST APIs with **ASP.NET Core**, Swagger, request validation, standardized error envelopes, and permission-aware endpoints consumed by customer portals and internal operations applications.
- Implemented message-driven provisioning using **RabbitMQ**, MassTransit, durable queues, dead-letter exchanges, bounded retries, and idempotent consumers to prevent duplicated SIM activations and subscription changes.
- Reworked slow fleet-management screens through virtualized tables, server-side filtering, normalized Redux state, incremental loading, and cancellation of obsolete requests for customers managing large device inventories.
- Corrected stale connectivity statuses caused by out-of-order carrier callbacks through timestamp validation, monotonic state transitions, reconciliation jobs, and real-time React updates delivered through **SignalR**.
- Containerized .NET and React applications with **Docker** and standardized delivery through **Azure DevOps**, adding automated tests, security scans, migration validation, environment checks, and production approval gates.
- Collaborated with telecom specialists, product managers, designers, and support teams to translate roaming and provisioning rules into maintainable service boundaries, practical interfaces, and incremental releases.

Asurion — Software Developer*Remote/ Full time***January 2017 – December 2018***Nashville, TN*

- Built customer and technician applications using **.NET Framework 4.6, ASP.NET MVC 5**, Web API, React, Redux, Redis, and SQL Server for policy eligibility, claims, payments, appointments, and repair-status tracking.
- Redesigned a fragmented claim journey as a guided React workflow backed by recoverable .NET orchestration APIs, increasing successful online claim completion by **26%** through clearer validation and failure recovery.
- Created a backend-for-frontend layer that combined customer, policy, inventory, payment, and appointment information, shielding browser applications from incompatible downstream contracts and partial service outages.
- Corrected duplicate repair bookings caused by repeated submissions and delayed responses through idempotency tokens, SQL Server uniqueness constraints, transactional validation, and visible request-state handling.
- Migrated selected jQuery and server-rendered pages to reusable React components while introducing shared form controls, centralized state, route-based organization, and consistent client-side validation.
- Implemented **Redis** caching for frequently requested eligibility and repair-location data, applying explicit invalidation and short expiration periods to improve responsiveness without returning outdated decisions.
- Developed scheduled .NET reconciliation services for incomplete claims and delayed payment callbacks, recovering transactions after provider timeouts while preserving audit records for service and finance investigations.
- Expanded automated coverage with **NUnit**, Moq, Selenium, Jest, API integration tests, and service mocks for claims, payments, appointments, eligibility decisions, and recoverable failure scenarios.

Rustici Software — Junior Software Developer*Hybrid/ Full time***June 2015 – December 2016***Nashville, TN*

- Maintained learning-platform applications using **.NET Framework 4.5, ASP.NET MVC 5**, Web API, MySQL, JavaScript, Backbone.js, and jQuery for course imports, SCORM launches, learner state, and xAPI processing.
- Implemented REST endpoints and administration workflows for course ingestion, launch configuration, and completion settings, adding validation for malformed archives, incomplete manifests, and nonstandard LMS payloads.
- Resolved excessive memory consumption during large course imports by streaming compressed packages, limiting parallel extraction, disposing temporary resources, and exposing accurate progress and actionable failure details.
- Built defensive processing for duplicated and out-of-order learning events, preserving accurate completion, score, and resume state across platforms with inconsistent callback and retry behavior.
- Improved database reliability through targeted indexes, transactional updates, and repeatable migration scripts for learner-state tables used during high-volume launches and reporting periods.
- Created reusable browser views and later evaluated isolated **React components** for selected administration workflows, documenting state management, testability, rendering behavior, and migration constraints.
- Added automated tests around course imports, launch tokens, xAPI statements, and completion transitions while collaborating with support teams to reproduce unusual SCORM integration failures.

EDUCATION

Tennessee State University — Bachelor's Degree in Computer Science

Sep 2011 – May 2015

CERTIFICATION

- **Microsoft Certified: Azure Developer Associate**
- **Microsoft Certified: Azure Solutions Architect Expert**
- **AWS Certified Developer – Associate**
- **Professional Scrum Master I — PSM I**
