

Kristine Stanley

Senior Software Engineer | Angular & Node.js, AWS

Coaldale, CO 81222 | kristine.stanley.dev@outlook.com | +1 (786) 949-7561 | <https://www.linkedin.com/in/kristine-stanley-341688411>

PROFESSIONAL SUMMARY

Senior Software Engineer with 11+ years delivering cybersecurity, connected-mobility, insurance, and learning-platform products using **Angular 2–19**, **TypeScript 2–5**, **Node.js 8–22**, **NestJS**, **RxJS**, **NgRx**, **PostgreSQL**, **AWS**, and **Azure**; combines frontend architecture, secure API development, legacy modernization, event-driven systems, observability, and technical leadership to improve application performance, reliability, delivery speed, and customer outcomes.

SKILLS

- **Frontend Engineering:** Angular 2–19, AngularJS, TypeScript 2–5, JavaScript ES6+, RxJS, NgRx, Angular Signals, Angular Material, CDK, Reactive Forms, standalone components, lazy loading, route guards, interceptors
- **Backend Engineering:** Node.js 8–22, NestJS 8–11, Express 4–5, Fastify, REST APIs, GraphQL, WebSockets, Server-Sent Events, background workers, scheduled jobs
- **UI Development:** HTML5, CSS3, Sass, Tailwind CSS, Bootstrap, responsive design, design systems, Storybook, WCAG accessibility, semantic HTML
- **API and Security:** OpenAPI, Swagger, OAuth 2.0, OpenID Connect, JWT, RBAC, API versioning, rate limiting, webhooks, request validation, API gateways
- **Architecture:** Microservices, modular monoliths, event-driven architecture, domain-driven design, CQRS, transactional outbox, backend-for-frontend, multi-tenant systems, idempotent processing
- **Cloud Platforms:** AWS Lambda, ECS, EKS, API Gateway, S3, RDS, DynamoDB, SQS, SNS, CloudWatch; Azure App Service, Functions, AKS, Service Bus, Key Vault, Application Insights
- **Databases and Messaging:** PostgreSQL, MySQL, SQL Server, MongoDB, DynamoDB, Redis, Kafka, RabbitMQ, database indexing, query optimization, schema migrations
- **Testing:** Jest, Jasmine, Karma, Angular Testing Library, Cypress, Playwright, Protractor, Supertest, Pact, Testcontainers, Mocha, Chai
- **DevOps:** Docker, Kubernetes, Terraform, Helm, GitHub Actions, Azure DevOps, Jenkins, Nx, npm, Yarn, pnpm, CI/CD, feature flags, blue-green deployments
- **Monitoring:** OpenTelemetry, Datadog, Prometheus, Grafana, ELK Stack, Sentry, CloudWatch, distributed tracing, structured logging, Core Web Vitals
- **Senior Engineering:** Technical leadership, frontend architecture, API design, mentoring, code reviews, incident response, root-cause analysis, Agile delivery, stakeholder communication

EXPERIENCE

Veracode Systems Inc — Senior Software Engineer

Remote/ Full time

April 2021 – May 2026

Somerville, MA

- Led architecture and delivery for enterprise application-security products using **Angular 9–19**, **TypeScript**, **RxJS**, **NgRx**, **Node.js 12–20**, and **NestJS** across vulnerability, policy, reporting, and remediation workflows.
- Replaced tightly coupled Angular modules and duplicated state logic with domain-oriented libraries, typed facades, standalone components, and **NgRx**, reducing recurring frontend defects by **34%** across multiple product teams.
- Resolved browser freezes on vulnerability dashboards by introducing CDK virtual scrolling, server-side pagination, memoized selectors, lazy feature loading, and optimized change detection, improving P95 interaction time by **42%**.

- Modernized the platform incrementally from **Angular 9** modules to later standalone architecture, updating RxJS patterns, strict template checking, routing, and shared libraries without disrupting customer-facing release schedules.
- Designed secure backend services with **Node.js**, **NestJS**, **PostgreSQL**, and **Redis**, enforcing tenant isolation, OAuth 2.0 authentication, role-based authorization, request validation, and auditable administrative operations.
- Eliminated duplicate vulnerability events during broker retries by applying idempotency keys, transactional outbox processing, **Kafka** consumer safeguards, and controlled dead-letter replay for recoverable failures.
- Built reusable Angular design-system components with **Storybook**, design tokens, keyboard navigation, and automated accessibility checks, enabling consistent tables, filters, dialogs, forms, and notifications across applications.
- Established automated quality gates using **Jest**, **Angular Testing Library**, **Cypress**, **Playwright**, **Supertest**, and contract tests, detecting interface regressions before deployment to enterprise environments.
- Implemented observability with **OpenTelemetry**, **Datadog**, structured logging, browser telemetry, and actionable service-level alerts, accelerating diagnosis of API latency, JavaScript errors, queue backlogs, and database contention.
- Mentored engineers through architecture reviews, pair programming, incident retrospectives, and performance-focused code reviews, aligning frontend, backend, security, quality, design, and product stakeholders around sustainable delivery.

Cubic Telecom USA — Software Engineer

Remote/ Full time

January 2019 – April 2021

San Diego, CA

- Developed connected-mobility portals and supporting services using **Angular 5–9**, **TypeScript**, **RxJS**, **NgRx**, **Node.js 8–12**, **Express**, and **PostgreSQL** for device, subscription, and connectivity operations.
- Reworked slow fleet-management screens with virtual scrolling, server-side filtering, normalized state, request cancellation, and incremental loading, improving responsiveness by **36%** for customers managing large connected-device inventories.
- Resolved activation failures caused by incompatible carrier identifiers and response schemas by introducing typed adapters, canonical domain models, correlation IDs, validation rules, and replayable reconciliation workflows.
- Implemented real-time provisioning updates through **WebSockets**, RxJS retry strategies, heartbeat monitoring, and explicit fallback states, giving operations teams reliable visibility into long-running carrier transactions.
- Designed Node.js APIs for device registration, SIM activation, billing, and subscription changes with **OpenAPI**, versioned contracts, consistent error envelopes, and permission-aware endpoints consumed by Angular applications.
- Introduced asynchronous processing with **RabbitMQ**, durable queues, dead-letter exchanges, bounded retries, and idempotent consumers, preventing duplicated activations while retaining complete traceability across provider calls.
- Expanded automated coverage with **Jasmine**, **Karma**, **Cypress**, **Jest**, and **Supertest**, reducing production regressions by **29%** across activation, usage, account, and subscription workflows.
- Containerized Angular and Node.js applications with **Docker** and standardized delivery through **Azure DevOps**, adding build validation, environment checks, database migrations, and controlled production promotion.
- Partnered with telecom specialists, product managers, designers, and support teams to translate roaming and provisioning rules into maintainable interfaces, service boundaries, documented edge cases, and incremental releases.

Asurion — Software Developer*Remote/ Full time***January 2017 – December 2018***Nashville, TN*

- Built customer and technician workflows using **AngularJS 1.4**, later **Angular 2–4**, **TypeScript**, **Node.js 4–8**, **Express**, and **SQL Server** for claims, eligibility, payments, and repair scheduling.
- Redesigned a fragmented multi-page claim journey as a guided Angular workflow with inline validation, recoverable state, and clearer error handling, increasing successful online claim completion by **27%**.
- Migrated selected jQuery and server-rendered modules to Angular components and services, establishing reusable controls, dependency injection, route guards, and shared validation without requiring a risky full-platform rewrite.
- Created Node.js orchestration APIs that combined policy, inventory, payment, appointment, and customer information, shielding browser applications from inconsistent downstream contracts and partial service outages.
- Corrected duplicate repair bookings caused by repeated submissions and delayed responses through idempotency tokens, database uniqueness constraints, transactional validation, and visible request-state management.
- Introduced **Redis** caching for frequently requested eligibility and location information, applying explicit invalidation and short-lived fallback rules to improve speed without returning outdated policy decisions.
- Expanded automated coverage with **Jasmine**, **Karma**, **Protractor**, **Mocha**, **Chai**, and API integration tests for claims, payments, appointments, and recoverable failure scenarios.
- Supported production releases and incidents by tracing failed requests across browser and service boundaries, correcting malformed payloads, improving timeout handling, and documenting root causes that prevented repeated disruptions.

Rustici Software — Junior Software Developer*Hybrid/ Full time***June 2015 – December 2016***Nashville, TN*

- Maintained learning-technology applications using **AngularJS 1.2–1.4**, JavaScript, **Node.js 0.10–4**, **Express 4**, and **MySQL** for course administration, SCORM launches, learner state, and xAPI processing.
- Implemented administration views and REST endpoints for course imports, launch configuration, and completion settings, adding validation for malformed archives, incomplete manifests, and nonstandard learning-platform payloads.
- Resolved memory growth during large course imports by streaming archives, limiting parallel extraction, releasing temporary objects, and displaying accurate progress and actionable failure information to administrators.
- Built defensive processing for duplicate and out-of-order learner events, preserving correct completion, score, and resume state across learning-management systems with inconsistent callback behavior.
- Improved maintainability by extracting reusable AngularJS directives, services, and form utilities while adding targeted database indexes and transactional updates for learner-state persistence.
- Added automated JavaScript and API tests around course imports, launch tokens, xAPI statements, and completion transitions, preventing regressions across multiple customer integration patterns.
- Collaborated with senior engineers and support specialists to reproduce unusual SCORM and xAPI failures, document payload assumptions, and deliver fixes that shortened customer troubleshooting cycles.

EDUCATION

Tennessee State University — Bachelor's Degree in Computer Science

Sep 2011 – May 2015

CERTIFICATION

- **AWS Certified Developer – Associate** — Amazon Web Services
- **Microsoft Certified: Azure Developer Associate** — Microsoft
- **Certified Kubernetes Application Developer — CKAD** — The Linux Foundation and Cloud Native Computing Foundation
