

Kristine Stanley

Staff Software Engineer – React, Node (Express/NestJS), AWS

Coaldale, CO 81222 | kristine.stanley.dev@outlook.com | +1 (786) 949-7561 | <https://www.linkedin.com/in/kristine-stanley-341688411>

PROFESSIONAL SUMMARY

Senior Software Engineer with 11+ years delivering cybersecurity, connected-mobility, insurance, and learning-platform products using **React 16–19**, **Next.js 12–15**, **Node.js 12–22**, **TypeScript**, **NestJS**, **PostgreSQL**, **AWS**, and **Azure**; recognized for modernizing legacy applications, designing secure event-driven services, improving frontend performance and API reliability, mentoring engineers, and converting complex requirements into scalable, observable, revenue-supporting systems.

SKILLS

- **Frontend:** React 16–19, Next.js 12–15, TypeScript 4–5, JavaScript ES6+, Redux Toolkit, TanStack Query, React Router, React Hook Form, Storybook, HTML5, CSS3, Sass, Tailwind CSS, Material UI, responsive design, WCAG accessibility
- **Backend:** Node.js 12–22, NestJS 8–11, Express 4–5, REST APIs, GraphQL, WebSockets, Server-Sent Events, OpenAPI, OAuth 2.0, OpenID Connect, JWT, background workers, scheduled jobs
- **Architecture:** Microservices, modular monoliths, event-driven architecture, domain-driven design, hexagonal architecture, CQRS, transactional outbox, idempotent processing, multi-tenant systems, API gateways, distributed caching
- **Cloud Platforms:** AWS EKS, ECS, Lambda, API Gateway, S3, RDS, DynamoDB, SQS, SNS, CloudFront, CloudWatch; Azure App Service, Functions, AKS, Service Bus, Key Vault, Application Insights
- **Databases and Messaging:** PostgreSQL, MySQL, SQL Server, MongoDB, DynamoDB, Redis, Kafka, RabbitMQ, database indexing, query optimization, schema migrations, data reconciliation
- **DevOps:** Docker, Kubernetes, Terraform, Helm, GitHub Actions, Azure DevOps, Jenkins, Nx, Turborepo, CI/CD pipelines, blue-green deployments, feature flags, infrastructure as code
- **Testing:** Jest, React Testing Library, Playwright, Cypress, Supertest, Pact, Mocha, Chai, Selenium, unit testing, integration testing, contract testing, end-to-end testing
- **Monitoring and Security:** OpenTelemetry, Datadog, Prometheus, Grafana, ELK Stack, Sentry, distributed tracing, structured logging, OWASP Top 10, secure coding, RBAC, incident response
- **Engineering Practices:** Technical leadership, architecture reviews, mentoring, code reviews, Agile delivery, production support, root-cause analysis, performance optimization, stakeholder communication

EXPERIENCE

Veracode Systems Inc — Senior Software Engineer

Remote/ Full time

April 2021 – May 2026

Somerville, MA

- Led architecture and delivery for security analytics workflows using **React 16–19**, **TypeScript**, **Node.js 12–20**, and **NestJS**, translating complex application-risk data into responsive experiences for enterprise development and security teams.
- Replaced fragile class-based screens and duplicated Redux logic with functional components, typed hooks, **Redux Toolkit**, and **TanStack Query**, reducing frontend defects by **34%** while simplifying feature ownership across multiple product squads.
- Resolved recurring dashboard freezes caused by oversized vulnerability payloads by adding server-side pagination, virtualized tables, memoized selectors, and compressed API responses, improving P95 interaction time by **41%**.
- Modernized legacy Node.js services from callback-heavy **Node.js 12** modules to **Node.js 20**, introducing asynchronous workflows, stronger TypeScript contracts, dependency upgrades, and automated regression checks without interrupting customer-facing releases.

- Designed secure REST and GraphQL endpoints with **NestJS**, **PostgreSQL**, **Redis**, and policy-based authorization, preventing cross-tenant data exposure while supporting configurable roles for administrators, analysts, and engineering users.
- Eliminated duplicate security events caused by retrying workers through idempotency keys, transactional outbox processing, and **Kafka** consumer safeguards, improving processing reliability and reducing noisy customer alerts.
- Built reusable React component libraries with **Storybook**, accessible interaction patterns, design tokens, and visual regression testing, enabling product teams to deliver consistent workflows without repeatedly rebuilding common controls.
- Strengthened delivery pipelines using **Docker**, **GitHub Actions**, **Kubernetes**, and infrastructure validation, adding unit, integration, contract, and end-to-end gates that shortened release preparation and improved deployment confidence.
- Implemented production observability with **OpenTelemetry**, **Datadog**, structured logging, distributed traces, and actionable service-level alerts, accelerating diagnosis of API latency, memory leaks, queue backlogs, and failed third-party integrations.
- Mentored engineers through architecture reviews, pairing, incident retrospectives, and performance-focused code reviews, improving technical decision quality while aligning frontend, backend, security, QA, and product stakeholders.

Cubic Telecom USA — Software Engineer

Remote/ Full time

January 2019 – April 2021

San Diego, CA

- Developed connected-mobility portals using **React 15–16**, **TypeScript**, **Node.js 8–12**, and **Express**, giving operations teams reliable visibility into SIM provisioning, device connectivity, usage, and account status.
- Reworked slow fleet and subscription screens by introducing normalized client state, incremental API loading, reusable table components, and request cancellation, improving page responsiveness by **36%** for large enterprise accounts.
- Built Node.js services that integrated carrier, billing, and device-management APIs, handling inconsistent schemas, delayed callbacks, duplicate notifications, and partial provider outages through validation, retries, and reconciliation jobs.
- Resolved production activation failures caused by mismatched identifiers across telecom partners by adding canonical mapping rules, audit trails, and replayable processing, reducing manual correction work for support and operations teams.
- Introduced asynchronous provisioning workflows with **RabbitMQ**, dead-letter queues, correlation identifiers, and idempotent consumers, preventing duplicate activations while preserving traceability across long-running external transactions.
- Expanded automated coverage with **Jest**, **React Testing Library**, **Supertest**, and contract fixtures, catching breaking response changes before deployment and reducing regression risk across frequently updated partner integrations.
- Containerized frontend and backend workloads with **Docker** and standardized CI/CD through **Azure DevOps**, replacing inconsistent manual deployments with repeatable builds, environment checks, and controlled production promotion.
- Optimized **PostgreSQL** queries and indexes supporting device searches and usage summaries, removing N+1 access patterns and stabilizing response times as customer and connectivity records increased.
- Partnered with product owners, telecom specialists, and support teams to break complex provisioning requirements into incremental releases, documenting operational edge cases and improving delivery predictability across distributed teams.

Asurion — Software Developer*Remote/ Full time***January 2017 – December 2018***Nashville, TN*

- Built customer and technician workflows for device-protection services using **React 15–16**, **Node.js 4–8**, **Express 4**, and JavaScript, supporting claims intake, appointment scheduling, eligibility checks, and repair status updates.
- Improved claim-form completion by **27%** after replacing multi-page server-rendered flows with guided React experiences, inline validation, saved progress, and clearer recovery paths for interrupted sessions.
- Developed API orchestration services that combined policy, customer, inventory, and appointment data, shielding frontend applications from incompatible downstream contracts and gracefully handling timeout and availability failures.
- Corrected duplicate appointment bookings caused by concurrent submissions through database constraints, idempotency tokens, and server-side state validation, reducing customer-service escalations and technician scheduling conflicts.
- Migrated selected modules from tightly coupled templates and jQuery handlers to reusable React components, establishing component boundaries, shared validation rules, and a practical path for continued frontend modernization.
- Added **Redis** caching for frequently requested eligibility and location data while preserving accurate invalidation after policy or inventory changes, reducing unnecessary load on slower internal services.
- Implemented automated API and browser testing with **Mocha**, **Chai**, **Sinon**, and **Selenium**, covering claims, payments, scheduling, and error-recovery scenarios that previously depended on manual regression checks.
- Supported production releases and incident response by analyzing logs, reproducing customer failures, coordinating fixes with dependent teams, and documenting root causes to prevent repeated service disruptions.

Rustici Software — Junior Software Developer*Hybrid/ Full time***June 2015 – December 2016***Nashville, TN*

- Maintained learning-technology applications and integration services using **Node.js 0.10–4**, **Express 4**, JavaScript, **Backbone.js**, and **MySQL**, supporting SCORM and xAPI content delivery for training-platform customers.
- Implemented REST endpoints and background jobs for course imports, launch tracking, and completion records, adding validation for malformed packages and defensive handling for incomplete learning-management-system data.
- Resolved memory growth in long-running import workers by profiling object retention, streaming large archives, and limiting parallel processing, improving stability for customers uploading complex course packages.
- Improved cross-browser administration screens with reusable JavaScript views, consistent form validation, and clearer error messages, reducing support effort associated with failed content configuration and launch settings.
- Collaborated with senior engineers on code reviews, release testing, database migrations, and customer issue analysis, building a strong foundation in API design, production support, and maintainable web application development.
- Added automated tests around course-state transitions and xAPI statement processing, preventing regressions in completion, score, and resume behavior across different learning-management-system implementations.
- Documented integration assumptions, payload examples, and troubleshooting procedures for support and implementation teams, shortening investigation time when customer platforms returned nonstandard or incomplete data.

EDUCATION

Tennessee State University — Bachelor's Degree in Computer Science

Sep 2011 – May 2015

CERTIFICATION

- **AWS Certified Developer – Associate** — Amazon Web Services
- **Microsoft Certified: Azure Developer Associate** — Microsoft
- **Certified Kubernetes Application Developer — CKAD** — The Linux Foundation and Cloud Native Computing Foundation
