

Kristine Stanley

Senior Frontend Engineer | React, Next.js & TypeScript

Coaldale, CO 81222 | kristine.stanley.dev@outlook.com | +1 (786) 949-7561 | <https://www.linkedin.com/in/kristine-stanley-341688411>

PROFESSIONAL SUMMARY

Senior Frontend Engineer with 11+ years building cybersecurity, connected-mobility, insurance, and learning-platform products using **React 16–19**, **Next.js 10–15**, **TypeScript 3–5**, **Redux Toolkit**, **TanStack Query**, and modern testing and cloud tooling; delivers scalable component systems, accessible user experiences, high-performance data interfaces, reliable frontend architecture, and technical leadership that improves release quality, developer productivity, and customer adoption.

SKILLS

- **Frontend:** React 16–19, Next.js 10–15, TypeScript 3–5, JavaScript ES6+, Redux Toolkit, TanStack Query, Zustand, React Router, React Hook Form, Formik, Context API, Server Components
- **UI Engineering:** HTML5, CSS3, Sass, CSS Modules, Tailwind CSS, Material UI, Styled Components, Storybook, responsive design, design systems, WCAG 2.1, semantic HTML
- **Performance:** Code splitting, lazy loading, route prefetching, bundle analysis, memoization, virtualization, image optimization, Core Web Vitals, SSR, SSG, ISR, hydration optimization
- **API Integration:** REST, GraphQL, WebSockets, Server-Sent Events, OpenAPI, Axios, Fetch API, OAuth 2.0, OpenID Connect, JWT, API gateways, backend-for-frontend patterns
- **Testing:** Jest, React Testing Library, Playwright, Cypress, Vitest, Storybook Testing, MSW, Pact, Selenium, unit testing, integration testing, end-to-end testing
- **Build and DevOps:** Vite, Webpack, Babel, Nx, Turborepo, npm, Yarn, pnpm, Docker, Kubernetes, GitHub Actions, Azure DevOps, Jenkins, Terraform
- **Cloud and Monitoring:** AWS S3, CloudFront, Lambda, API Gateway, CloudWatch; Azure App Service, Application Insights; Datadog, Sentry, OpenTelemetry, Grafana
- **Engineering Practices:** Frontend architecture, micro-frontends, component-driven development, accessibility reviews, code reviews, mentoring, Agile delivery, incident response, technical documentation

EXPERIENCE

Veracode Systems Inc — Senior Software Engineer

Remote/ Full time

April 2021 – May 2026

Somerville, MA

- Led frontend architecture and delivery for enterprise cybersecurity applications using **React 16–19**, **Next.js**, and **TypeScript**, translating complex vulnerability and compliance data into understandable workflows for security and development teams.
- Modernized legacy class-based React modules into typed functional components with custom hooks, **Redux Toolkit**, and **TanStack Query**, reducing recurring frontend defects by **34%** and simplifying maintenance across several engineering squads.
- Resolved severe dashboard freezes caused by rendering thousands of security findings through row virtualization, server-side pagination, memoized selectors, and deferred loading, improving P95 interaction speed by **42%**.
- Planned and executed incremental migrations from **React 16** to later React releases, replacing deprecated lifecycle methods and incompatible libraries while maintaining feature delivery and avoiding disruptive platform rewrites.
- Introduced **Next.js** rendering strategies across customer-facing pages, selecting SSR, static generation, incremental regeneration, and client rendering according to security, freshness, personalization, and performance requirements.

- Built an accessible component library with **Storybook**, design tokens, typed properties, keyboard navigation, and automated visual regression testing, enabling multiple teams to reuse consistent production-ready interface patterns.
- Corrected stale-data and race-condition defects by separating server state from local workflow state, standardizing query keys, canceling obsolete requests, and implementing reliable optimistic updates with rollback behavior.
- Established frontend testing standards with **Jest**, **React Testing Library**, **Playwright**, and **MSW**, covering critical security workflows and preventing breaking API changes from reaching enterprise customers.
- Implemented browser-side monitoring through **Sentry**, **Datadog**, structured telemetry, and Core Web Vitals reporting, allowing engineers to identify JavaScript errors, slow routes, failed requests, and customer-specific performance problems.
- Mentored frontend engineers through architecture reviews, pair programming, accessibility workshops, and performance-focused code reviews, strengthening technical ownership while improving collaboration among design, product, backend, and quality teams.

Cubic Telecom USA — Software Engineer

Remote/ Full time

January 2019 – April 2021

San Diego, CA

- Developed responsive connectivity-management portals using **React 16**, **TypeScript**, **Redux**, and reusable component patterns, helping automotive and enterprise customers monitor devices, subscriptions, network activity, and usage information.
- Reworked slow fleet-management screens through server-side filtering, incremental data retrieval, virtualized tables, and request cancellation, improving page responsiveness by **36%** for customers managing large connected-device inventories.
- Resolved inconsistent user-interface behavior caused by incompatible carrier responses by introducing typed adapters, shared validation rules, normalized state models, and defensive rendering for missing or delayed provider information.
- Implemented real-time activation and connectivity updates with **WebSockets**, reconnect handling, heartbeat checks, and visible fallback states, reducing unnecessary manual refreshes during long-running device provisioning operations.
- Created permission-aware navigation and reusable authorization components around OAuth and role-based access rules, preventing restricted account, billing, and device actions from appearing to unauthorized users.
- Expanded the shared interface library with documented tables, forms, modals, notifications, and status indicators, reducing duplicated implementation work and improving visual consistency across customer and operations applications.
- Added **Jest**, **React Testing Library**, **Cypress**, and API mocks to high-risk activation and subscription workflows, reducing production regressions by **29%** while giving teams greater confidence in frequent releases.
- Standardized frontend builds using **Webpack**, **Docker**, and **Azure DevOps**, replacing inconsistent manual packaging with repeatable validation, environment configuration, artifact generation, and controlled deployment processes.
- Worked with product managers, designers, API engineers, and telecom specialists to convert complex connectivity rules into practical interface flows while documenting edge cases for support and implementation teams.

Asurion — Software Developer

Remote/ Full time

January 2017 – December 2018

Nashville, TN

- Built customer and technician applications with **React**, JavaScript, Redux, and responsive CSS, supporting insurance eligibility, claim submission, device diagnostics, repair appointments, and customer status tracking.
- Redesigned a fragmented multi-page claim process as a guided React workflow with inline validation, saved progress, and understandable recovery states, increasing successful online claim completion by **27%**.
- Migrated selected jQuery and server-rendered modules to reusable React components, establishing shared form controls, validation behavior, and state-management conventions without requiring a risky full-platform rewrite.
- Developed configurable form architecture for different device types, protection plans, and claim reasons, reducing duplicated screens while allowing product teams to introduce new workflow variations more efficiently.
- Corrected duplicate appointment submissions caused by repeated clicks and delayed API responses through disabled transition states, request identifiers, and server-confirmed workflow updates displayed clearly to customers.
- Expanded automated coverage using **Jest**, **Enzyme**, **Mocha**, and **Selenium**, validating claims, payments, scheduling, and error recovery while reducing dependence on lengthy manual regression testing.
- Improved accessibility across customer forms through semantic controls, keyboard navigation, focus management, and descriptive error messages, making important claims workflows more usable for customers with assistive technologies.
- Supported production releases by analyzing browser errors, reproducing customer-reported failures, coordinating API fixes, and documenting root causes that prevented repeated disruptions across claims and appointment journeys.

Rustici Software — Junior Software Developer

Hybrid/ Full time

June 2015 – December 2016

Nashville, TN

- Maintained learning-platform interfaces using JavaScript, **Backbone.js**, jQuery, HTML, CSS, and early component-based patterns, supporting course administration, content launches, learner activity, and reporting workflows.
- Implemented administration screens for course imports, launch configuration, and completion settings while providing clear validation for malformed packages and incomplete learning-management-system information.
- Improved browser performance during large course imports by streaming upload progress, reducing unnecessary DOM updates, and presenting actionable failure messages instead of leaving administrators with stalled screens.
- Created reusable views and form utilities that reduced duplicated JavaScript logic across content-management workflows and established a practical foundation for later migration toward modern component-based interfaces.
- Contributed to early React evaluations by rebuilding selected internal views as isolated components and documenting differences in state handling, rendering behavior, testing, and integration with existing frontend modules.
- Added automated browser and JavaScript tests for course configuration, launch behavior, score displays, and completion states, preventing regressions across different learning-management-system implementations.
- Collaborated with senior engineers and support specialists during customer issue investigations, translating unusual SCORM and xAPI integration failures into reproducible cases, documented fixes, and clearer troubleshooting guidance.

EDUCATION

Tennessee State University — Bachelor's Degree in Computer Science

Sep 2011 – May 2015

CERTIFICATION

- **Meta Front-End Developer Professional Certificate** — Meta
- **AWS Certified Developer – Associate** — Amazon Web Services
- **Professional Scrum Master I — PSM I** — Scrum.org
