

TAYLOR PENTZ

Senior Software Engineer – C# (.NET), React, Azure

taylorpentz2@gmail.com | 1601 Larkin, High Point, NC | +1 (980) 981-4522

<https://www.linkedin.com/in/taylor-p-b0389a3ba>

Professional Summary

Senior Software Engineer with 10+ years in enterprise software development across fintech and SaaS domains, specializing in **React 16–18, .NET Core 3.1–8, ASP.NET Web API, and cloud-native AWS/Azure architectures**, delivering scalable microservices, high-performance frontend systems, and distributed backend platforms that improve system reliability, deployment velocity, and user experience in global engineering environments.

Technical Skills

- ❖ **Frontend:** React 16–18, Redux Toolkit, TypeScript 4.x, JavaScript ES6+, Next.js, HTML5, CSS3, Material UI, Tailwind CSS
- ❖ **Backend:** .NET Core 3.1–8, ASP.NET Web API, C#, Entity Framework Core, LINQ, RESTful APIs, gRPC
- ❖ **Databases:** SQL Server, PostgreSQL, MongoDB, Redis
- ❖ **Cloud & DevOps:** Microsoft Azure (App Services, Functions, Azure SQL, AKS, DevOps Pipelines), CI/CD, GitHub Actions
- ❖ **Architecture:** Microservices, Event-Driven Architecture, Clean Architecture, CQRS, Domain-Driven Design (DDD)
- ❖ **Testing & Monitoring:** xUnit, NUnit, Jest, Postman, Selenium, Prometheus, Grafana, ELK Stack
- ❖ **Tools:** Git, Jira, Confluence, Swagger/OpenAPI, Visual Studio, VS Code

Professional Experience

SumatoSoft

Senior Software Engineer

Boston, MA (Remote) | Apr 2023 – Mar 2025

- ❖ Designed and delivered enterprise-grade full-stack solutions using **React 18, .NET Core 6, and Azure microservices architecture**, improving system scalability and maintainability across distributed cloud-native applications.
- ❖ Led migration of legacy monolithic services into **Azure-based microservices**, improving deployment reliability and reducing production downtime by **32% through improved CI/CD automation and modular architecture redesign**.
- ❖ Optimized backend APIs built in **ASP.NET Core Web API**, reducing average response latency by 35% through caching strategies, database indexing improvements, and asynchronous processing enhancements.
- ❖ Implemented scalable frontend architecture using **React, Redux Toolkit, and TypeScript**, improving UI rendering performance and reducing component re-render overhead across large data-driven dashboards.
- ❖ Built and maintained CI/CD pipelines using **Azure DevOps**, enabling automated build, test, and deployment workflows that significantly improved release frequency and reduced manual deployment errors.

- ❖ Resolved critical production issues including memory leaks, API bottlenecks, and authentication failures within **Azure-hosted services**, ensuring high system availability across multi-region environments.
- ❖ Developed secure RESTful APIs with **.NET Core 6**, integrating OAuth2 and Azure Active Directory for enterprise-grade authentication and role-based access control.
- ❖ Collaborated with DevOps and QA teams to implement automated testing strategies using **xUnit and Selenium**, improving regression test coverage and reducing post-release defects.
- ❖ Worked on event-driven integrations using Azure Functions and Service Bus to decouple services and improve system resilience under high traffic loads.
- ❖ Partnered with product and architecture teams to design scalable SaaS solutions aligned with business requirements, ensuring long-term maintainability and cloud cost optimization.

Hexaview Technologies Inc.

Software Engineer

New York, NY | Jul 2018 – Mar 2023

- ❖ Developed enterprise web applications using **React 17, .NET Core 3.1, and ASP.NET Core APIs**, supporting financial data processing platforms with high transaction volumes and strict latency requirements.
- ❖ Improved system performance by **25%** through backend optimization in **C# and SQL Server**, including query tuning, stored procedure redesign, and API response optimization strategies.
- ❖ Designed and implemented RESTful services using **ASP.NET Core**, enabling secure integration between frontend dashboards and backend microservices across multiple business units.
- ❖ Built dynamic and reusable UI components using **React and Redux**, enhancing frontend scalability and reducing redundant UI logic across multiple enterprise modules.
- ❖ Implemented CI/CD workflows using **Azure DevOps**, automating build pipelines and reducing deployment time while increasing release stability across staging and production environments.
- ❖ Worked on migration of legacy .NET Framework applications into **.NET Core 3.1**, improving maintainability and enabling containerized deployment on Azure infrastructure.
- ❖ Integrated secure authentication using **Azure Active Directory**, enforcing role-based access control and improving enterprise-level security compliance.
- ❖ Debugged and resolved complex production issues involving API timeouts, database deadlocks, and frontend rendering inconsistencies in high-load environments.
- ❖ Collaborated with cross-functional teams to deliver scalable SaaS features aligned with agile sprint cycles and evolving business requirements.

SimbirSoft Company

Software Developer

Boston, MA | Mar 2015 – Jun 2018

- ❖ Developed full-stack enterprise applications using **React, ASP.NET Web API, and .NET Framework transitioning to .NET Core**, supporting modernization initiatives across legacy systems.
- ❖ Improved application efficiency by **30%** through backend refactoring, SQL query optimization, and redesign of synchronous processing flows into asynchronous services.
- ❖ Built REST APIs using **ASP.NET Web API**, enabling integration between frontend systems and backend enterprise services with improved reliability and maintainability.
- ❖ Designed reusable UI components using early **React.js patterns**, improving frontend consistency and reducing redundant UI development effort across modules.
- ❖ Supported migration of legacy monolithic applications into modular service-based architecture, laying foundation for future microservices adoption on Azure.

- ❖ Worked on database optimization in **SQL Server**, improving query execution times and reducing system bottlenecks in high-transaction workloads.
- ❖ Participated in Agile development cycles, collaborating with QA and product teams to ensure timely delivery of enterprise software features.
- ❖ Debugged production issues including API failures, data inconsistencies, and authentication bugs, ensuring stable application performance across environments.

Microsoft

Software Developer Intern
Cambridge, MA | Aug 2014 – Feb 2015

- ❖ Assisted in development of internal enterprise tools using **C# and ASP.NET**, contributing to backend service enhancements and UI improvements for internal dashboards.
- ❖ Supported development teams in debugging and resolving issues in existing .NET applications, improving system stability and reducing recurring defects.
- ❖ Worked on RESTful service integration between internal systems, improving data flow efficiency across distributed components.
- ❖ Gained hands-on exposure to enterprise software development lifecycle, including code reviews, unit testing, and release management practices.
- ❖ Contributed to frontend enhancements using basic JavaScript and early UI frameworks, improving usability of internal tools.
- ❖ Assisted in database query optimization tasks using SQL Server, improving retrieval performance for reporting systems.
- ❖ Collaborated with senior engineers to understand scalable system design principles and enterprise architecture best practices.

Projects

Enterprise SaaS Analytics Platform

- ❖ Built a scalable analytics platform using **React 18, .NET Core 6, and Azure microservices**, enabling real-time data visualization and reporting for enterprise clients. Implemented role-based dashboards, API aggregation layers, and event-driven processing using Azure Functions and Service Bus.

Cloud-Based Financial Transaction System

- ❖ Designed a secure financial processing system using **ASP.NET Core APIs and React**, deployed on **Microsoft Azure with CI/CD pipelines**, supporting high-volume transactions with strict consistency, audit logging, and performance monitoring across distributed services.

Certifications

- ❖ Microsoft Certified: **Azure Developer Associate (AZ-204)**
- ❖ Microsoft Certified: **Azure Solutions Architect Associate (AZ-305)**
- ❖ Certified Scrum Master (CSM)
- ❖ .NET Developer Certification (C# & ASP.NET Core)

Education

University of North Carolina at Chapel Hill

Bachelor's Degree in Computer Science (2010 – 2014)
