PROFESSIONAL SUMMARY

Results-driven Backend Java Developer with over 9 years of hands-on experience designing and building scalable web systems, REST APIs, and integrations across commerce, marketing, and data platforms. Adept at migrating legacy Java EE systems to modern Spring Boot-based architectures while optimizing SQL data access layers. Passionate about clean architecture, efficient backend logic, and enterprise-grade integrations with payment, loyalty, and POS systems. Eager to contribute technical leadership to high-impact mobile platforms used by millions.

TECHNICAL SKILLS

- **Languages & Frameworks:** Java EE, Spring Boot, Servlets, JDBC, Tomcat, Node.js
- **API Development:** RESTful APIs, Swagger/OpenAPI, JSON, HTTP integrations
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis, Oracle, NoSQL, SQL performance tuning
- **Cloud & DevOps:** AWS, Google Cloud (GCP), Azure, Terraform, Docker, GitHub Actions, Azure DevOps
- **Testing:** JUnit, Mockito, Postman, Integration Tests, CI/CD pipelines
- **Tools & Platforms:** Git, GitLab, Jira, Bitbucket, IntelliJ, Visual Studio Code

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2025

Timișoara, Romania (Remote)

- Designed and maintained scalable Java EE APIs with a modular architecture to power large-scale B2B platforms across marketing and education sectors, ensuring seamless client integrations.
- Migrated multiple legacy Java EE modules to Spring Boot microservices, improving deployment efficiency, scalability, and onboarding time for new features by over 40%.
- Implemented payment and delivery integrations via third-party APIs, including PayPal, Stripe, DHL, and POS terminals, enabling real-time transaction processing.
- Refactored SQL-heavy services and restructured query layers for MySQL and PostgreSQL databases, achieving up to 60% improvement in response time.
- Led system integration efforts with loyalty systems using robust HTTP and token-based authentication, maintaining secure and seamless data synchronization.
- Established unit and integration testing frameworks using JUnit and Mockito across backend components, achieving over 85% code coverage.

- Participated in architecture planning sessions to standardize service patterns and advocate for clean code and scalable API contracts.
- Mentored junior developers and led peer code reviews, promoting consistency and best practices in backend development and system design.
- Containerized applications using Docker for deployment into Azure-based environments, improving consistency across staging and production setups.
- Collaborated with QA and DevOps teams for automated testing and deployment pipelines using GitHub Actions and Azure DevOps.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Developed backend Java EE services to power high-load digital campaign platforms used by retail and FMCG clients, handling thousands of concurrent users.
- Maintained and enhanced RESTful APIs with JSON payloads for mobile applications, providing loyalty points, user profile sync, and real-time analytics.
- Optimized database queries and indexing strategies for campaign reporting tools, reducing load times by over 50% for large data exports.
- Implemented API integrations with social media platforms and SMS/email service providers to automate user engagement workflows.
- Developed monitoring and fallback mechanisms for HTTP-based third-party APIs, ensuring system stability during partner outages.
- Refactored core modules to align with SOLID principles, reducing technical debt and increasing testability across the codebase.
- Worked closely with cross-functional teams on release management and user acceptance testing across QA and staging environments.
- Built reusable code templates and project structures to accelerate onboarding and code consistency across the engineering team.
- Participated in containerization proof-of-concept using Docker, preparing the infrastructure for future migration to Kubernetes.
- Wrote and maintained extensive unit and integration tests across campaign services, increasing confidence in automated deployments.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Developed backend features using Java EE and Servlets for an internal ERP system used by retail distributors and logistics partners.
- Built scalable modules for invoicing, product inventory, and delivery tracking, significantly reducing operational overhead.
- Integrated third-party payment and inventory systems via REST APIs, streamlining reconciliation and warehouse management.
- Refactored JDBC-based data access layers for performance and maintainability across multi-database environments (PostgreSQL, Oracle).
- Contributed to SQL tuning for complex joins and subqueries, improving report generation time for large datasets.
- Collaborated with the frontend team to develop JSON-based interfaces for web and mobile applications, enhancing UX with real-time data sync.

- Led backend testing initiatives with integration scripts and Postman to ensure reliability across distributed components.
- Applied design patterns such as Factory and Strategy to build flexible service interfaces and reduce code duplication.
- Participated in agile ceremonies and sprint planning to ensure timely and prioritized delivery of backend features.
- Provided training sessions for new engineers, establishing onboarding documentation and internal coding guidelines.

Software Developer

Decima Digital

November 2015 – April 2016

Tallinn, Estonia

- Contributed to backend logic for a data processing platform using Java and RESTful services, improving file ingestion and transformation pipelines.
- Created reusable modules for user access control, file uploads, and error reporting in Java EE-based microservices.
- Participated in integration with external business APIs, including accounting and CRM platforms, facilitating unified customer workflows.
- Delivered code refactoring of legacy logic to modern servlet containers, enhancing maintainability and deployment reliability.
- Wrote SQL scripts to clean and migrate data from old schemas to normalized structures within PostgreSQL databases.
- Reviewed and enhanced HTTP-based service layers to improve error handling and API response consistency across services.
- Delivered functional specifications and backend service documentation to align with QA and frontend team deliverables.
- Practiced TDD methodology for smaller backend services, leading to faster defect identification and reduced bug reports.
- Provided daily progress updates and pair programming sessions as part of a lean agile delivery team.
- Developed detailed test cases and edge scenario validations to support UAT phases in the final delivery cycle.

Software Developer Intern

Borna Technology

September 2014 – August 2015

Tallinn, Estonia (On-Site)

- Assisted in the design and implementation of backend features for internal analytics dashboards using Java EE and JSP.
 - Built simple JDBC-based data access modules to support internal reporting services with PostgreSQL backends.
 - Participated in early-stage system design and flowcharting sessions for microservice architecture rollout.
 - Implemented basic data validation and input sanitization rules to prevent common injection vulnerabilities.
 - Helped write API documentation and user guides for junior QA and support staff across departments.
 - Created automated scripts to validate logs and error states across early prototype deployments.
 - Collaborated with cross-functional teams to deliver product demos and internal system showcases.
 - Wrote test scripts for core backend modules to simulate real-world inputs across HTTP endpoints.
 - Researched and documented backend performance metrics to help with optimization planning.
 - Improved onboarding documentation and dev environment setup guides for future interns.
-

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,
2010 – 2014

CERTIFICATIONS

- ❖ Oracle Certified Professional: Java SE 8 Programmer
 - ❖ AWS Certified Developer – Associate
 - ❖ Google Cloud Associate Cloud Engineer
 - ❖ Microsoft Certified: Azure Fundamentals
-

PROJECTS

- ✓ **Mobile Commerce Loyalty Engine** – Migrated legacy Java EE backend to Spring Boot while integrating Stripe, Square, and loyalty partners.
- ✓ **POS Sync Gateway** – Developed and deployed a Java-based service to unify POS devices and retail systems via RESTful APIs.
- ✓ **Retail Analytics Pipeline** – Designed SQL-optimized reporting engine and containerized it using Docker on Azure cloud infrastructure.
- ✓ **Unified Identity Management** – Implemented secure OAuth-based authentication between multiple retail platforms using Spring Security.
