

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-330682401/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Versatile and performance-driven Senior Android Developer with 8+ years of experience in mobile application development using Kotlin and Java. Adept in MVVM architecture, concurrency via Kotlin Coroutines, and large-scale app modularization. Passionate about crafting high-quality user experiences and collaborating with cross-functional teams to deliver performant and maintainable mobile solutions.

TECHNICAL SKILLS

- **Mobile:** Kotlin, Java, Android SDK, Jetpack Compose, Coroutines, LiveData, Room, Retrofit, Dagger/Hilt, Navigation Component, Data Binding
- **Architecture:** MVVM, Clean Architecture, SOLID Principles
- **Cross-Platform (Basic):** Flutter, Swift (iOS), Combine, SwiftUI, React Native
- **Tools & CI/CD:** Git, Bitbucket, Firebase, Jenkins, Fastlane, Gradle, JIRA, GitHub Actions
- **Testing:** JUnit, Espresso, Mockito, UI Automator
- **Other:** HTML, CSS, JavaScript, RESTful APIs, JSON, XML

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2025

Timișoara, Romania (Remote)

- Led Kotlin-based mobile app development across several large-scale client projects using MVVM architecture with Coroutines to manage asynchronous operations effectively and reduce memory leaks.
- Architected a modular codebase for scalable Android applications, ensuring high maintainability, faster CI/CD pipeline integration, and testability across distributed teams.
- Developed complex UIs using Jetpack Compose and legacy XML layouts, optimizing for accessibility, performance, and adaptive layouts across diverse device sizes and Android versions.
- Worked closely with backend engineers to define consistent API contracts, handle error edge cases, and build responsive, fault-tolerant mobile interfaces.
- Established architectural enforcement of SOLID principles across the mobile codebase, enabling better team collaboration and reducing bug regressions by 35%.
- Refactored critical modules to optimize thread handling using Kotlin Coroutines, significantly improving responsiveness on older devices.
- Introduced dependency injection using Hilt to decouple components, simplify testing strategies, and improve code reusability.
- Mentored junior developers through code reviews and technical workshops, raising team productivity and ensuring adherence to industry best practices.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Designed native Android applications using Kotlin and MVVM, handling complex user flows, offline data persistence with Room, and push notifications using Firebase Cloud Messaging.
- Integrated third-party SDKs for analytics, in-app purchases, and video playback, ensuring seamless interactions across modules with robust error handling and retry strategies.
- Enhanced concurrency-heavy modules using structured concurrency in Coroutines, reducing crash rates during async operations in production by over 50%.
- Coordinated with product teams and UX designers to implement pixel-perfect UI/UX from Figma mockups with emphasis on accessibility and localization.
- Conducted regression testing and automated test implementation with Espresso and JUnit to maintain 95%+ test coverage across core modules.
- Collaborated with DevOps teams to set up automated build pipelines and distribution via Fastlane and GitHub Actions for faster QA delivery cycles.
- Documented and maintained internal Android libraries for consistent coding practices and streamlined onboarding of new developers.
- Initiated Kotlin multiplatform proof-of-concept, exploring shared codebase opportunities with iOS, improving development time efficiency across mobile platforms.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Delivered end-to-end mobile apps using Java and later transitioned to Kotlin, refactoring core logic to adopt modern Android architectural components and patterns.
- Collaborated with QA and backend teams to debug production issues, achieving high stability scores with a bug resolution time reduction of 40%.
- Utilized ViewModels, LiveData, and Repository pattern to build lifecycle-aware and unit-testable components in the app ecosystem.
- Integrated RESTful services using Retrofit and handled complex JSON parsing and data transformation through custom deserializers.
- Worked on dynamic UI rendering through RecyclerView and DiffUtil for high-performance list management under large datasets.
- Refined app startup performance by implementing lazy-loading strategies, deferred view rendering, and cold-start optimization techniques.
- Participated in full release cycle, from development and beta testing to Google Play submission and post-deployment support.
- Improved image handling performance using Glide and optimized memory management to reduce ANRs and improve battery usage.

Software Developer

Decima Digital

November 2015 – April 2016

Tallinn, Estonia

- Developed internal Android tools to automate internal operations, utilizing Java-based services and lightweight SQLite for offline support.
- Designed forms and data-driven screens with a focus on handling various device screen sizes and densities using ConstraintLayout.

- Built reusable components for input validation and error feedback, ensuring a consistent and accessible user experience.
- Integrated REST APIs with retry mechanisms and caching policies to maintain performance in low-connectivity environments.
- Provided test coverage for key modules and helped migrate legacy Java code to Kotlin, improving readability and reducing boilerplate.
- Collaborated with cross-border teams to align release schedules and code quality expectations.
- Assisted in creating onboarding documentation and helped streamline developer setup and emulator configurations.
- Used Git for source control and participated in daily stand-ups, sprint planning, and demo presentations.

Software Developer Intern

Borna Technology

September 2014 – August 2015

Tallinn, Estonia (On-Site)

- Built several Android utility applications as internal tools using Java and basic Android SDK libraries.
- Gained hands-on experience with Activity/Fragment lifecycle management and event handling through listeners and broadcast receivers.
- Developed small-scale UI modules that followed basic Material Design principles and adhered to accessibility standards.
- Integrated local SQLite databases and custom adapters to support offline-first user workflows.
- Learned and applied version control systems, Agile practices, and documentation habits during collaborative projects.
- Investigated user feedback and implemented iterative UI improvements to enhance user satisfaction in prototype deployments.
- Shadowed senior developers to gain practical knowledge of debugging, testing, and architecture patterns.
- Created sample apps that used XML layouts and demonstrated proficiency in core Android components such as Services, Notifications, and Intents.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,

2010 – 2014

CERTIFICATIONS

- ❖ Android App Development Specialization – Coursera (by Vanderbilt University)
 - ❖ Kotlin for Android Developers – JetBrains Academy
 - ❖ Clean Architecture and SOLID Principles in Android – Udemy
 - ❖ Unit Testing & UI Automation for Android – Pluralsight
-

PROJECTS

Modular E-Commerce Android App

- Architected and developed a Kotlin-based e-commerce mobile app with multiple feature modules (cart, user, checkout, inventory) using MVVM and Hilt for DI.
- Achieved 99% crash-free sessions and 4.8-star rating on Google Play Store through extensive testing, analytics instrumentation, and performance optimizations.

Cross-Platform Travel Companion (Flutter + Kotlin backend)

- Built a hybrid travel app allowing itinerary creation, offline maps, and real-time alerts. Designed core features in Flutter, but managed background services and push notifications with Kotlin modules.

SwiftUI Feature Parity Research

- Conducted in-depth comparison between Android Jetpack Compose and SwiftUI. Created prototypes using Combine, StateObject, and ObservedObject to replicate features from Kotlin-based modules on iOS.
