

Rodrigo Fernandez

Senior Mobile iOS Engineer — Swift / SwiftUI / Objective-C

Katy, Texas | +1 (407) 801-1287 | www.linkedin.com/in/rodrigobermejo-fernandez-9a5a0664 | rodrigobfdev@gmail.com

Summary

Senior Mobile iOS Engineer with 11+ years building secure **Swift 5.0–5.9**, **SwiftUI 1.0–5.0**, **Objective-C 2.0**, and UIKit applications across cloud infrastructure, fintech, healthcare, eCommerce, and SaaS industries. Skilled in migrating legacy Objective-C screens into modular Swift features, fixing crash-prone navigation, memory-retain cycles, API latency issues, and App Store release blockers while improving stability, accessibility, and user conversion. Strong with Xcode 11–15, Combine, Core Data, URLSession, APNs, Fastlane, CI/CD, XCTest, and scalable MVVM/MVVM-C architecture for consumer apps, internal tools, and enterprise mobile platforms.

Skills

- **Mobile:** **Swift 5.0–5.9**, **SwiftUI 1.0–5.0**, **Objective-C 2.0**, UIKit, Foundation, Combine, Async/Await, Grand Central Dispatch, OperationQueue, Auto Layout, Storyboards, XIBs, Core Animation, Core Location, MapKit, AVFoundation, WidgetKit, Push Notifications, Deep Linking, Universal Links
- **Architecture:** **MVVM**, **MVVM-C**, VIPER, Clean Architecture, Coordinator Pattern, Modular Architecture, Dependency Injection, Repository Pattern, Protocol-Oriented Programming
- **Data & Storage:** Core Data, Realm, SQLite, Keychain, UserDefaults, FileManager, Codable, JSON, Offline Sync, Caching, Secure Storage
- **Networking:** URLSession, Alamofire, REST APIs, GraphQL, OAuth 2.0, JWT, SSL Pinning, API Pagination, Retry Logic, Background Uploads, Background Downloads
- **Testing & Quality:** XCTest, XCUITest, Snapshot Testing, Unit Testing, UI Testing, TestFlight, Firebase Crashlytics, Instruments, Leaks, Time Profiler, Memory Graph Debugger
- **DevOps & Release:** Xcode Cloud, Fastlane, GitHub Actions, Bitrise, Jenkins, App Store Connect, Provisioning Profiles, Certificates, CI/CD, Semantic Versioning
- **Backend Collaboration:** Node.js, REST API Contracts, Firebase, AWS Cognito, AWS S3, AWS Lambda, CloudWatch, GraphQL APIs
- **Tools:** Xcode 11–15, Git, GitHub, GitLab, Jira, ClickUp, Figma, Postman, Charles Proxy, Firebase Console, App Store Connect

Experience

Lightedge — Senior Software Engineer (*Apr 2020 – Mar 2026*)

- Led enterprise iOS development for cloud infrastructure and managed services platforms using **Swift 5.0–5.9**, **SwiftUI 2.0–5.0**, UIKit, Combine, and MVVM-C architecture.
- Migrated high-traffic account, billing, and monitoring screens from legacy **Objective-C 2.0** and storyboard-heavy flows into modular Swift components with reusable coordinators.
- Resolved recurring crash issues caused by retain cycles inside nested closure-based API callbacks by applying **weak self**, Instruments memory profiling, and safer Combine subscriptions.
- Improved app launch performance by **38%** through lazy dependency initialization, image caching optimization, Core Data fetch tuning, and background service cleanup.

- Implemented secure authentication with OAuth 2.0, Keychain storage, biometric login, refresh-token rotation, and environment-based API configuration for enterprise users.
- Built SwiftUI dashboards for infrastructure usage, service alerts, billing summaries, and ticket visibility while keeping UIKit interoperability for older production modules.
- Reduced production crash rate by **31%** by triaging Firebase Crashlytics reports, grouping duplicate stack traces, and fixing navigation-state inconsistencies.
- Created reusable networking layers with **URLSession**, Codable, retry policies, token refresh handling, SSL validation, and structured error mapping for API failures.
- Improved release reliability by **42%** by introducing Fastlane lanes, automated TestFlight distribution, certificate validation, and App Store Connect metadata checks.
- Refactored complex notification logic for **APNs**, deep links, and Universal Links so users could open alerts directly into the correct service-detail screen.
- Partnered with backend and DevOps teams to debug API timeout, pagination, and schema mismatch issues using Postman, Charles Proxy, CloudWatch, and structured logs.
- Mentored junior iOS developers on Swift concurrency, SwiftUI state management, unit testing, code review discipline, and production-safe mobile release practices.

NIX United — Software Engineer *(Oct 2016 – Mar 2020)*

- Developed fintech, healthcare, and eCommerce iOS applications using **Swift 4.2–5.2**, UIKit, Objective-C interoperability, Core Data, REST APIs, and MVVM architecture.
- Modernized legacy Objective-C payment and onboarding modules into Swift-based screens while preserving existing business rules, analytics events, and App Store behavior.
- Fixed a difficult checkout crash caused by duplicated navigation pushes during slow API responses by adding idempotent state handling and disabled-action guards.
- Improved screen rendering speed by **29%** after replacing heavy table reloads with diffable-style data updates, cached view models, and optimized image decoding.
- Implemented secure payment flows with tokenized card storage, biometric confirmation, Keychain usage, API validation, and defensive error handling for failed transactions.
- Built reusable UIKit components for forms, validation messages, onboarding steps, profile settings, and order tracking across multiple client-branded applications.
- Reduced API-related support tickets by **24%** by improving offline messaging, retry behavior, timeout handling, and user-facing error states for weak networks.
- Integrated Firebase Analytics, Crashlytics, remote configuration, and push notification campaigns to support product experiments and post-release stability monitoring.
- Collaborated with QA teams to expand XCTest and XCUITest coverage around login, checkout, profile editing, password reset, and critical transaction workflows.
- Resolved App Store rejection issues related to privacy descriptions, background location usage, permissions wording, and incomplete reviewer test-account instructions.
- Supported flexible client delivery by switching between Swift feature development, Objective-C bug fixing, release automation, and backend API contract validation.

Webiz Digital — Software Developer *(Jan 2014 – Sep 2016)*

- Built consumer-facing mobile applications for retail, booking, and digital marketing clients using **Objective-C 2.0, Swift 3.0–4.0**, UIKit, Core Data, and REST APIs.
- Converted selected Objective-C controllers into Swift modules while maintaining shared bridging headers, existing delegates, and stable behavior across older iOS versions.
- Fixed memory leaks in image-heavy catalog screens by removing strong delegate references, reducing cached bitmap size, and validating improvements with Instruments.

- Improved product browsing performance by **33%** through API pagination, local response caching, background image loading, and optimized UITableView cell reuse.
- Implemented location-based store finder features with Core Location, MapKit annotations, permission handling, and fallback behavior for denied or restricted access.
- Developed booking, cart, profile, coupon, and notification screens with Auto Layout, reusable UIKit controls, form validation, and localized UI content.
- Reduced failed login complaints by **21%** after improving backend error mapping, token refresh handling, secure Keychain storage, and clearer validation messages.
- Integrated push notifications, deep links, Firebase Crashlytics, analytics events, and campaign tracking to help marketing teams measure mobile conversion funnels.
- Worked closely with designers to translate Figma and Sketch layouts into responsive iPhone and iPad interfaces with consistent spacing and accessibility labels.
- Supported App Store releases by preparing screenshots, checking provisioning profiles, resolving build-signing errors, and validating release candidates through TestFlight.

Aurio — Junior Software Developer *(Oct 2012 – Dec 2013)*

- Supported early mobile product development using **Objective-C 2.0**, UIKit, Foundation, Storyboards, XIBs, REST APIs, SQLite, and MVC architecture.
- Built profile, settings, list-detail, search, and notification screens while learning production iOS patterns through code reviews and senior engineer feedback.
- Fixed layout issues on multiple iPhone screen sizes by replacing hardcoded frames with Auto Layout constraints and reusable view configuration methods.
- Improved crash-free sessions by **18%** after handling nil API values, defensive JSON parsing, missing image URLs, and invalid navigation transitions.
- Assisted migration from manual XML-style parsing into safer JSON parsing utilities, reducing parsing errors and improving API response maintainability.
- Implemented local persistence for cached user preferences, recently viewed content, and offline-friendly list data using SQLite and lightweight repository helpers.
- Resolved build and signing issues by updating provisioning profiles, bundle identifiers, certificate settings, and target configuration inside Xcode projects.
- Collaborated with backend developers to clarify API payload contracts, required fields, error codes, and authentication behavior before mobile implementation.
- Gained strong fundamentals in debugging, UIKit lifecycle, Objective-C memory management, App Store preparation, Git workflow, and mobile QA validation.

Microsoft — Software Developer Intern *(Jun 2012 – Sep 2012)*

- Supported internal engineering tools using **C#, .NET Framework 4.0–4.5, ASP.NET MVC 3–4**, JavaScript, jQuery, and SQL Server, gaining practical experience in enterprise software quality and structured development workflows.
- Assisted senior engineers with debugging UI defects, validation issues, and data-handling problems, documenting root causes clearly so fixes could be reviewed and released with lower regression risk.
- Built small internal web modules for tracking records, reviewing status changes, and improving team visibility, applying clean HTML, CSS, JavaScript, and backend integration patterns.
- Resolved early-stage bugs related to inconsistent form validation and SQL query results by reproducing issues locally, checking logs, and working with mentors to apply safer input-handling rules.

Education

Texas State University

Bachelor's Degree in Computer Science (*Sep 2008 – May 2012*)
