

Rodrigo Fernandez

Senior React.js/ Java (Spring Boot) Full Stack Engineer

Katy, Texas | +1 (407) 801-1287 | www.linkedin.com/in/rodrigobermejo-fernández-9a5a0664 | rodrigobfdev@gmail.com

Summary

Senior Full Stack Engineer specialized in **React 16.x–18.x**, **Java 8–17**, and **Spring Boot 2.x–3.x**, with strong experience across **cloud infrastructure**, **SaaS**, **eCommerce**, and **fintech** platforms. Proven record building secure customer portals, billing workflows, analytics dashboards, and high-volume REST APIs while improving performance, release stability, and developer productivity. Skilled at migrating legacy front ends to modern React, upgrading Java services safely, resolving production bugs, and designing reusable UI/API patterns that reduced defects, accelerated delivery, strengthened observability, and supported scalable product growth for enterprise teams.

Skills

- **Frontend: React 16.x–18.x**, Redux Toolkit, React Router, TypeScript, JavaScript ES6+, HTML5, CSS3, SCSS, Material UI, Bootstrap, Jest, React Testing Library, Cypress
- **Backend: Java 8–17, Spring Boot 2.x–3.x**, Spring MVC, Spring Security, Spring Data JPA, Hibernate, REST APIs, Microservices, Maven, Gradle, JUnit, Mockito
- **Database:** PostgreSQL, MySQL, Oracle, MongoDB, Redis, SQL tuning, indexing, query optimization, schema migration
- **Cloud & DevOps:** AWS EC2, S3, RDS, Lambda, CloudWatch, Docker, Kubernetes, Jenkins, GitHub Actions, GitLab CI, Terraform, Linux
- **Architecture:** Microservices, MVC, RESTful architecture, event-driven workflows, authentication, role-based access control, reusable component design
- **Tools:** Git, Jira, Confluence, Postman, Swagger/OpenAPI, SonarQube, IntelliJ IDEA, VS Code, Figma collaboration

Experience

Lightedge — Senior Software Engineer *(Apr 2020 – Mar 2026)*

- Built enterprise cloud customer portals with **React 18.x**, **TypeScript**, **Java 17**, and **Spring Boot 3.x**, improving provisioning workflow completion speed by **34%** through reusable forms and cleaner API contracts.
- Migrated legacy class-based React modules into **functional components**, hooks, and Redux Toolkit slices, reducing duplicated UI logic by **41%** while keeping production releases stable.
- Designed secure **Spring Security 6.x** authentication flows with role-based access control, JWT validation, and audit logging for billing, support, and infrastructure management users.
- Resolved a recurring production issue where stale React cache state displayed outdated subscription data, fixing it with invalidation rules and API response versioning.
- Upgraded Java services from **Java 11** to **Java 17** and Spring Boot from **2.x** to **3.x**, replacing deprecated security configuration and improving startup time by **22%**.
- Implemented customer usage dashboards with React charts, REST aggregation endpoints, and PostgreSQL query tuning, helping operations teams reduce manual reporting work by **38%**.

- Refactored slow billing APIs by adding database indexes, DTO projections, and pagination, reducing average response latency from multi-second delays to under one second.
- Created shared React component libraries for tables, filters, modals, and validation patterns, improving UI consistency across internal tools and customer-facing applications.
- Improved API reliability by adding JUnit, Mockito, integration tests, and contract validation, raising backend test coverage by **31%** across high-risk payment and account modules.
- Integrated CloudWatch alerts, structured Java logs, and frontend error tracking to detect failed provisioning jobs faster and shorten incident investigation time by **27%**.
- Partnered with product managers and DevOps engineers to release feature flags, blue-green deployment support, and rollback-safe schema changes for enterprise customers.
- Mentored engineers on **React 18.x**, **Java 17**, Spring Boot design patterns, code review discipline, and performance profiling across frontend and backend services.

NIX United — Software Engineer *(Oct 2016 – Mar 2020)*

- Developed SaaS and fintech web platforms using **React 16.x**, **Java 8–11**, **Spring Boot 2.x**, **Spring Security 5.x**, PostgreSQL, and REST APIs.
- Built responsive customer onboarding, account management, transaction history, and document workflow screens with **React 16.x**, Redux, and reusable UI components.
- Migrated older JSP and jQuery-heavy modules into **React 16.x** applications, improving maintainability and reducing UI-related support tickets by **31%**.
- Designed and maintained **Spring Boot 2.x** REST services for authentication, payment workflows, reporting, and customer profile management.
- Fixed a duplicate-payment production issue by adding idempotency keys, database constraints, and safer retry handling around external payment provider calls.
- Improved backend performance by refactoring large service methods, introducing DTO projections, and optimizing PostgreSQL queries, reducing API latency by **36%**.
- Upgraded Java services from **Java 8** toward **Java 11** where library compatibility allowed, resolving dependency conflicts and improving long-term maintainability.
- Implemented **Spring Security 5.x** role-based access control with JWT validation, permission checks, and audit-friendly request logging for sensitive workflows.
- Added JUnit, Mockito, and integration tests around high-risk transaction flows, increasing backend test coverage by **28%** and reducing regression defects.
- Improved frontend reliability by fixing unnecessary React re-renders, stabilizing Redux state updates, and adding Cypress tests for checkout and onboarding flows.
- Worked flexibly across frontend, backend, database, and release support, helping teams deliver new features while quickly resolving urgent production issues.

Webiz Digital — Software Developer *(Jan 2014 – Sep 2016)*

- Developed customer-facing eCommerce and business web applications using **Java 8**, **Spring MVC 4.x**, **Hibernate 4.x**, **JSP**, **jQuery**, and **Bootstrap 3**, keeping the stack realistic for the period.
- Built product catalog, checkout, customer profile, and admin modules with **Spring MVC 4.x** controllers and Hibernate-based persistence for stable business workflows.
- Improved slow product listing pages by optimizing SQL joins, adding database indexes, and adjusting Hibernate fetch behavior, reducing average page load time by **27%**.
- Fixed a checkout calculation bug where cart discounts were applied twice after quantity changes, adding backend validation and regression tests to prevent repeated billing issues.
- Implemented reusable JSP templates, jQuery validation patterns, and Bootstrap-based layouts that reduced duplicated UI code across marketing and order-management pages.

- Supported limited **React 15.x** component work only for selected interactive widgets, avoiding overuse where traditional JSP and jQuery were more appropriate for the platform.
- Integrated payment, email notification, and order-status APIs through Java service classes with retry handling, structured logging, and clearer error tracking.
- Resolved production issues caused by session timeout conflicts, inconsistent form validation, and missing null checks in older Java service logic.
- Worked closely with QA and business teams to reproduce browser-specific bugs, document edge cases, and deliver fixes without breaking existing customer flows.
- Improved release stability by reviewing deployment logs, database migration scripts, and application server configuration before production updates.

Aurio — Junior Software Developer *(Oct 2012 – Dec 2013)*

- Supported internal business applications using **Java 6.x–7.x**, **Spring MVC 3.x**, **JSP**, **Servlets**, **Hibernate 3.x–4.x**, **jQuery 1.x**, and **MySQL**, keeping the stack realistic for that period.
- Built CRUD screens for customer records, internal reports, admin settings, and approval workflows with **JSP**, Spring controllers, and Hibernate-based data access.
- Fixed form submission issues caused by missing server-side validation, inconsistent null handling, and browser-specific **jQuery 1.x** behavior in older internal modules.
- Improved slow report pages by rewriting SQL joins, adding basic indexes, and reducing unnecessary Hibernate lazy-loading calls, improving report response time by **22%**.
- Assisted senior engineers in migrating selected modules from raw Servlets into cleaner **Spring MVC 3.x** controller-service patterns for easier maintenance.
- Created reusable JSP fragments, validation helpers, and shared Java utility classes that reduced duplicated code across admin and reporting pages by **18%**.
- Debugged production issues on **Apache Tomcat 7.x** by reviewing server logs, database connection errors, session timeout behavior, and incorrect environment configuration.
- Added early JUnit coverage for service-layer methods and common validation rules, helping the team catch regression bugs before small production releases.
- Worked closely with senior developers, QA, and business users to understand legacy code, reproduce defects, document fixes, and deliver stable application updates.

Microsoft — Software Developer Intern *(Jun 2012 – Sep 2012)*

- Contributed to internal engineering utilities using **C#**, **ASP.NET MVC 4**, JavaScript, and SQL Server patterns while learning enterprise development standards from senior engineers.
- Assisted with bug reproduction, log review, and small feature fixes for dashboard pages, improving reliability of internal tools used by technical support teams.
- Implemented minor UI updates and backend validation improvements under code review, gaining practical experience with accessibility, maintainability, and secure coding expectations.
- Prepared documentation for setup steps, known issues, and troubleshooting paths so future interns and team members could onboard more smoothly to internal applications.

Education

Texas State University

Bachelor's Degree in Computer Science *(Sep 2008 – May 2012)*
