Professional Summary

Senior Software Engineer specializing in financial services, healthcare, SaaS, and cloud platform industries with deep experience delivering **.NET 5.0–8.0, ASP.NET Core 5.0–8.0, C# 9.0–12.0, Azure, SQL Server**, and microservices solutions; strong record migrating legacy .NET Framework 4.6–4.8 systems to modern APIs, fixing production issues, improving performance by 30%–55%, implementing secure payment and reporting features, mentoring engineers, and applying Azure Developer Associate certified engineering practices across backend, API, database, DevOps, observability, and team leadership work in enterprise delivery.

Technical Skills

- **Languages:** C# 5.0–12.0, SQL, JavaScript, TypeScript, PowerShell
- **Backend:** .NET Framework 4.5–4.8, .NET Core 2.1–3.1, .NET 5.0–8.0, ASP.NET MVC 5, ASP.NET Core 5.0–8.0, Web API 2, REST APIs, WCF
- **Database:** SQL Server 2012–2022, PostgreSQL, MySQL, Entity Framework 6.x, EF Core 3.1–8.0, Dapper, Stored Procedures
- **Cloud & DevOps:** Azure App Service, Azure Functions v3–v4, Azure Service Bus, Azure Storage, Azure Key Vault, Application Insights, Azure DevOps, GitHub Actions, Docker 20.x–24.x
- **Frontend:** React 16.x–18.x, Angular 8.x–16.x, TypeScript 4.x–5.x, JavaScript ES6+, HTML5, CSS3, Bootstrap
- **Architecture:** Microservices, Clean Architecture, CQRS, Event-Driven Architecture, Domain-Driven Design, SOLID, API Gateway
- **Testing & Tools:** xUnit, NUnit, Moq, Postman, Swagger/OpenAPI, Serilog, SonarQube, Jira, Git

Professional Experience

Viaro Networks Inc.

Senior Software Engineer | January 2021 – December 2025

- Designed enterprise **.NET 6.0–8.0** and **ASP.NET Core 6.0–8.0** microservices for financial and healthcare platforms, supporting secure transaction workflows, reporting APIs, and role-based internal portals.
- Migrated several legacy **.NET Framework 4.8** services into **.NET 7.0** APIs with Clean Architecture, reducing deployment risk while keeping business-critical payment and claims workflows stable.
- Fixed a production timeout issue in a high-volume reporting service by optimizing **EF Core 7.0** queries, adding SQL indexes, and improving API response time by **48%**.
- Implemented a secure customer onboarding feature using **ASP.NET Core Identity**, JWT authentication, Azure Key Vault secrets, and audit logging for compliance-heavy enterprise users.
- Resolved a recurring duplicate-payment bug by adding idempotency keys, transaction locking, and retry-safe service logic across **C# 11.0** payment orchestration layers.
- Improved background processing reliability by moving long-running jobs into **Azure Functions v4** and Azure Service Bus queues, reducing failed job retries by **37%**.

- Built reusable API templates with **Swagger/OpenAPI**, centralized exception handling, Serilog correlation IDs, and health checks for faster team delivery across multiple services.
- Upgraded CI/CD pipelines in Azure DevOps by adding automated builds, unit tests, code quality gates, and deployment approvals for safer production releases.
- Refactored a slow legacy stored procedure package into optimized SQL Server 2019 queries and Dapper-based reads, improving dashboard load speed by **42%**.
- Collaborated with frontend engineers using React 18.x and TypeScript 5.x to deliver user-facing workflow screens backed by secure **ASP.NET Core 8.0** APIs.
- Mentored mid-level developers on **C#**, SOLID design, dependency injection, async programming, and production debugging practices through code reviews and design sessions.
- Applied **Azure Developer Associate** certified practices across cloud deployment, observability, secret management, and scalable API design for enterprise-grade .NET delivery.

VividCloud

Software Engineer | January 2016 – December 2020

- Developed SaaS and logistics applications using **.NET Core 2.1–3.1**, **ASP.NET MVC 5**, Web API 2, SQL Server 2016, Angular 8.x, and Azure App Service.
- Migrated selected modules from **.NET Framework 4.6–4.8** MVC controllers into **.NET Core 3.1** APIs, helping the team modernize without interrupting customer operations.
- Fixed a shipment-status synchronization issue caused by race conditions by adding queue-based processing, database constraints, and safer retry handling in **C# 8.0** services.
- Improved API throughput by **35%** by replacing inefficient Entity Framework queries with projection-based reads, pagination, and optimized SQL Server indexes.
- Built a customer billing feature with **ASP.NET Web API**, SQL Server stored procedures, validation rules, and automated invoice generation for recurring SaaS accounts.
- Reduced production support tickets by **31%** by adding structured logging, better exception messages, and Application Insights traces for service-level investigation.
- Integrated third-party payment and logistics APIs by building resilient HTTP clients, retry policies, timeout controls, and defensive response parsing in **.NET Core 3.1**.
- Created reusable Angular 8.x admin screens connected to **ASP.NET Core** endpoints, allowing operations teams to manage customer accounts without database access.
- Resolved memory pressure in a background export service by streaming large files, batching SQL reads, and removing unnecessary in-memory object mapping.
- Contributed to Azure DevOps release pipelines with build validation, environment variables, deployment slots, and rollback steps for safer cloud releases.
- Worked closely with QA, product owners, and support teams to reproduce bugs, write technical fixes, and deliver stable releases under sprint deadlines.

Minimalist Moon

Software Developer | January 2013 – December 2015

- Built business web applications with **.NET Framework 4.5–4.6**, **ASP.NET MVC 4–5**, Web API 2, Entity Framework 6.x, SQL Server 2012–2014, jQuery, and Bootstrap.
- Implemented inventory and order-management features for eCommerce clients using **C# 5.0–6.0**, MVC controllers, Razor views, and SQL Server stored procedures.
- Fixed a critical order-total calculation bug by reviewing tax rules, correcting server-side validation, and adding regression tests around checkout pricing logic.
- Improved page rendering speed by **29%** by reducing unnecessary database calls, caching lookup data, and simplifying heavy Razor view logic.
- Created REST-style Web API 2 endpoints for mobile and partner integrations, using token validation, DTO mapping, and consistent HTTP response handling.

- Migrated older Web Forms screens into **ASP.NET MVC 5** modules gradually, preserving existing database logic while improving maintainability and user experience.
- Reduced failed imports by **34%** by adding file validation, detailed error reporting, and retry-safe processing for CSV-based supplier data workflows.
- Worked with SQL Server 2014 to design tables, indexes, views, and stored procedures supporting product catalogs, reporting pages, and admin dashboards.
- Resolved session timeout and authentication issues by reviewing IIS settings, cookie configuration, and forms authentication behavior across staging and production.
- Supported deployments through IIS, Windows Server, Git branching, release notes, and post-release smoke testing for client-facing .NET applications.

Microsoft

Software Developer Intern | *July 2012 – December 2012*

- Supported internal application development using **C#, ASP.NET, SQL Server**, JavaScript, HTML, and CSS, contributing to maintainable features, defect fixes, and internal productivity improvements within an established engineering environment.
- Assisted with enhancement work on administrative tools by implementing smaller backend changes, improving frontend behavior, and validating data flows so teams could use internal systems more efficiently.
- Helped troubleshoot a recurring issue where malformed input created inconsistent records in a staging workflow, then added validation and safer handling that improved data quality and reduced repeat test failures.
- Created SQL-based reports and lightweight utilities for tracking operational information, giving internal stakeholders better visibility into usage patterns and making manual data collection less necessary.
- Participated in debugging sessions, code reviews, and team testing cycles, gaining hands-on exposure to production-minded development practices while contributing reliable fixes and incremental usability improvements.

Education

Florida State University

Bachelor's Degree in Computer Science | 2008 – 2012
