

TAYLOR PENTZ

Senior Software Engineer

taylorpentz2@gmail.com | 1601 Larkin, High Point, NC | +1 8042860439
<https://www.linkedin.com/in/taylor-p-b0389a3ba>

Professional Summary

Backend-focused Senior Software Engineer with expertise in **Java, Go, PHP, Node.js, and Python**, delivering scalable microservices, distributed APIs, and high-performance systems. Skilled in designing event-driven architectures, implementing CI/CD pipelines, and deploying containerized workloads across **AWS, GCP, and Docker**. Strong database experience with **SQL and NoSQL**, ensuring secure, optimized, and resilient systems.

Technical Skills

- ❖ **Languages & Frameworks:** Java, Go, PHP, Node.js, Python, Express, Spring Boot, Django, Laravel
- ❖ **Cloud & DevOps:** AWS, GCP, Docker, Kubernetes, Terraform, Jenkins, GitHub Actions
- ❖ **Databases:** PostgreSQL, MySQL, MongoDB, Redis, DynamoDB
- ❖ **Architecture & Tools:** REST APIs, GraphQL, Microservices, Event-Driven Systems, Kafka, RabbitMQ

Professional Experience

SumatoSoft

Senior Software Engineer
Boston, MA (Remote) | Apr 2023 – Mar 2025

- ❖ Designed and implemented backend microservices in **Java and Go**, optimizing request handling and throughput to support thousands of concurrent API calls.
- ❖ Built resilient API gateways using **Node.js and Express** with proper authentication, rate limiting, and caching strategies for large-scale SaaS deployments.
- ❖ Migrated legacy PHP monolith services to modular **microservices in Python and Go**, reducing interdependencies and increasing maintainability across environments.
- ❖ Applied **AWS Lambda, S3, RDS, DynamoDB** and **GCP Pub/Sub** to orchestrate cloud-native event-driven pipelines processing real-time data streams.
- ❖ Established fully automated **CI/CD pipelines with Docker, Kubernetes, and Jenkins**, ensuring production-ready deployments with zero-downtime rollouts.
- ❖ Developed optimized **SQL schemas and NoSQL collections**, introducing indexing and sharding strategies to significantly reduce query latency at scale.
- ❖ Conducted code reviews, enforced security best practices, and mentored junior engineers to maintain high standards of backend engineering excellence.
- ❖ Led cross-functional collaboration with frontend and DevOps teams to integrate APIs, streamline deployments, and align backend services with product requirements.

Hexaview Technologies Inc.

Software Engineer

New York, NY | Jul 2018 – Mar 2023

- ❖ Engineered enterprise-grade backend services in **PHP (Laravel, Symfony)** and **Java (Spring Boot)**, focusing on scalability, modularity, and API-first design.
- ❖ Integrated **Node.js middleware** for real-time communications and implemented WebSockets to support interactive dashboards and event-driven features.
- ❖ Designed large-scale **Python-based ETL pipelines**, extracting and transforming complex datasets while leveraging AWS S3 and RDS for storage and retrieval.
- ❖ Built and maintained robust **CI/CD automation using Docker containers**, supporting staging, QA, and production deployment lifecycles across multiple regions.
- ❖ Enhanced backend fault tolerance by adopting **NoSQL data stores (MongoDB, DynamoDB)** and implementing efficient caching strategies with Redis.
- ❖ Applied **AWS services (EC2, ECS, SQS, CloudWatch)** for infrastructure scaling, monitoring, and resilient system operations under heavy workloads.
- ❖ Collaborated closely with product managers to gather requirements, design backend solutions, and translate business logic into technical implementations.
- ❖ Mentored interns and junior engineers in backend best practices, system debugging, and clean code standards to improve engineering efficiency.

SimbirSoft Company

Software Developer

Boston, MA | Mar 2015 – Jun 2018

- ❖ Developed backend modules in **Java and PHP** for enterprise platforms, implementing secure APIs and reusable business logic for cross-platform integration.
- ❖ Applied **Python scripting** for automation tasks, including database migrations, data processing, and log parsing to streamline development operations.
- ❖ Built **Node.js services** for asynchronous event handling, significantly improving system responsiveness and reducing request bottlenecks.
- ❖ Designed **PostgreSQL and MySQL schemas** with relational integrity, foreign keys, and performance-driven indexing strategies.
- ❖ Adopted early containerization practices with **Docker** to isolate application services, enhancing reliability of deployment environments.
- ❖ Partnered with frontend teams to ensure seamless API integration while documenting backend endpoints and maintaining contract-driven interfaces.
- ❖ Conducted root-cause analysis on production incidents and delivered long-term backend improvements to reduce recurrence of issues.
- ❖ Participated in Agile ceremonies and sprint planning to deliver incremental backend features on schedule and aligned with business needs.

Microsoft

Software Developer Intern

Cambridge, MA | Aug 2014 – Feb 2015

- ❖ Contributed to backend development for enterprise productivity tools using **C# and Java**, focusing on implementing APIs that handled high-volume transactions.

- ❖ Designed and optimized **SQL database queries**, ensuring efficient storage and retrieval of structured enterprise data.
- ❖ Collaborated with senior engineers to learn and apply modern backend patterns, including layered architecture and dependency injection principles.
- ❖ Assisted with debugging and testing backend components, identifying issues in production-like environments and applying fixes for deployment readiness.
- ❖ Documented code, APIs, and system flows for team-wide knowledge sharing and compliance with internal development standards.
- ❖ Participated in design discussions and provided input on system architecture decisions, learning industry best practices from Microsoft engineering teams.
- ❖ Engaged in Agile development workflows, attending daily standups and contributing to sprint deliverables within the internship period.
- ❖ Gained practical experience in enterprise-level engineering, setting the foundation for future backend career growth.

Projects

- ❖ Built **Go-based microservice platform** for processing IoT device data streams with event-driven pipelines.
- ❖ Developed **Node.js API gateway** integrating multiple backend services with OAuth2 authentication.
- ❖ Implemented **Python ETL system** for large-scale financial data ingestion and transformation.
- ❖ Migrated **PHP monolith** into modular REST microservices, improving scalability and maintainability.
- ❖ Designed **Java-based backend** for e-commerce platform supporting real-time order tracking and inventory updates.

Certifications

- ❖ AWS Certified Solutions Architect – Associate
- ❖ Google Cloud Professional Cloud Developer
- ❖ Docker Certified Associate

Education

University of North Carolina at Chapel Hill

Bachelor's Degree in Computer Science (2010 – 2014)
