

TAYLOR PENTZ

Senior Software Engineer

taylorpentz2@gmail.com | 1601 Larkin, High Point, NC | +1 (980) 981-4522

<https://www.linkedin.com/in/taylor-p-b0389a3ba>

Professional Summary

Senior Backend Developer with 10+ years of proven success designing and building distributed backend systems, microservices, and RESTful APIs using Java and Spring Boot. Adept at delivering scalable, fault-tolerant, and high-performance backend architectures in cloud-native environments (AWS/GCP). Passionate about system monitoring, automation, and clean code practices. Strong experience integrating NoSQL/SQL databases (MongoDB, PostgreSQL), deploying to cloud platforms, and driving UAT/test processes in agile teams.

Technical Skills

- ❖ **Languages:** Java, TypeScript, JavaScript, Python, SQL
- ❖ **Frameworks:** Spring Boot, Hibernate, Express.js
- ❖ **Microservices:** RESTful APIs, Kafka, RabbitMQ, OpenTelemetry
- ❖ **Cloud:** AWS (Lambda, ECS, S3, RDS), GCP (Cloud Run, GKE, Pub/Sub)
- ❖ **Databases:** PostgreSQL, MongoDB, MySQL, Redis
- ❖ **Monitoring:** Prometheus, Grafana, New Relic, ELK Stack
- ❖ **CI/CD:** Jenkins, GitHub Actions, Docker, Kubernetes
- ❖ **Others:** Git, JIRA, Agile/Scrum, Figma, Postman, Swagger

Professional Experience

SumatoSoft

Senior Software Engineer

Boston, MA (Remote) | Apr 2023 – Mar 2025

- Engineered high-performance microservices in Java and Spring Boot to support large-scale data processing and API workflows across customer-facing applications.
- Led migration of legacy monolith to distributed architecture, introducing event-driven microservices and improving system availability and scalability by 40%.
- Designed and deployed GCP-native solutions using Cloud Run and Pub/Sub, optimizing data streaming and cutting infrastructure costs by 25%.
- Integrated MongoDB and PostgreSQL databases into real-time backend services with schema versioning, data sharding, and high-availability configurations.
- Built dashboards using Prometheus and Grafana for real-time API and resource monitoring, proactively identifying HTTP error spikes and service degradations.
- Collaborated with cross-functional teams and customer integration support (CIS) for UAT, test execution, and CI/CD validation of releases.
- Implemented distributed tracing and logging with OpenTelemetry and ELK stack to meet all non-functional observability requirements.

- Maintained over 90% code coverage and conducted peer code reviews, improving overall code quality and reducing production bugs by 35%.

Hexaview Technologies Inc.

Software Engineer

New York, NY | Jul 2018 – Mar 2023

- Delivered multiple scalable backend services using Java 11+, Spring Boot, and Hibernate within enterprise fintech and logistics platforms.
- Architected microservices deployed via Docker and Kubernetes clusters, achieving zero-downtime deployments and container orchestration efficiency.
- Developed APIs integrated with third-party financial systems and REST-based gateways, enabling real-time transaction reconciliation and audits.
- Managed GCP deployments leveraging Cloud Build, GKE, and IAM roles for security, achieving 99.9% SLA compliance across all services.
- Designed schema-less models in MongoDB for dynamic data ingestion pipelines, supporting over 10M documents with efficient indexing strategies.
- Led root cause analysis and troubleshooting during critical outages, introducing automated alerting and improving MTTR by 60%.
- Directed system performance tuning, reducing memory usage by 30% and improving API throughput by optimizing DB connections and caching layers.
- Participated in sprint planning, backlog grooming, and retrospective meetings, ensuring alignment of technical efforts with business objectives.

SimbirSoft Company

Software Developer

Boston, MA | Mar 2015 – Jun 2018

- Developed and maintained enterprise-grade backend systems in Java for clients in healthcare and ecommerce domains, ensuring HIPAA-compliant data handling.
- Introduced CI pipelines and Dockerized environments for backend services, reducing manual deployment efforts by over 80%.
- Created and optimized RESTful APIs consumed by mobile and web clients, achieving consistent sub-200ms response times.
- Integrated NoSQL solutions including MongoDB and Redis to support real-time analytics, caching, and session management.
- Built performance dashboards and health checks to monitor service uptime, response time distribution, and user behavior metrics.
- Partnered with QA and UAT teams to create test harnesses and define acceptance criteria for all backend modules.
- Spearheaded documentation efforts using Swagger and internal wikis to facilitate onboarding and cross-team development.
- Mentored junior backend engineers on code practices, version control, and design patterns, improving team throughput and quality.

Microsoft

Software Developer Intern

Cambridge, MA | Aug 2014 – Feb 2015

- Contributed to the backend components of internal enterprise productivity tools written in Java and C#.
- Created REST APIs and integrated testing frameworks, supporting cross-platform functionality across mobile and desktop clients.
- Participated in architectural design sessions, helping refactor legacy codebases into modular services to reduce complexity and improve maintainability.
- Delivered dashboards and real-time monitoring tools using internal frameworks to help teams measure feature performance.
- Assisted in implementing security best practices in API development, focusing on authentication and data encryption.
- Presented intern project to the engineering leadership, resulting in parts of the code being adopted into production.
- Shadowed senior engineers during code reviews and release cycles to understand professional software delivery standards.
- Contributed to automated test suites using JUnit and Mockito, achieving 85% test coverage.

Projects

- ✓ **Real-Time Investment Platform** (*SumatoSoft, 2024*)
Built a real-time investment platform for retail users, handling live asset pricing, order execution, and portfolio tracking with millisecond-level accuracy. Enabled seamless onboarding, trade execution, and automated compliance checks.
- ✓ **Event-Driven Wealth Management System** (*Hexaview, 2021*)
Led backend design of a Kafka-based portfolio alerting system that processed 5M+ events daily. Implemented rules engine for proactive client engagement and risk management.

Certifications

- **Distributed Order Management Platform** (*SumatoSoft, 2024*)
Designed and built a microservices-based backend in Java and Spring Boot to manage 50K+ concurrent orders. Used Kafka for event-driven communication and MongoDB for real-time inventory and order tracking.
- **Cloud-Native API Monitoring Dashboard** (*SumatoSoft, 2023*)
Built a centralized monitoring tool with OpenTelemetry and Prometheus to trace API calls, monitor latency, and surface HTTP errors. Integrated with GCP and Grafana to visualize real-time system health.
- **Real-Time Healthcare Integration APIs** (*Hexaview, 2022*)
Developed RESTful services to synchronize patient data between clinical systems. Used Spring Boot and MongoDB to support flexible schema requirements and achieve sub-second data propagation.

Education

University of North Carolina at Chapel Hill

Bachelor's Degree in Computer Science (2010 – 2014)
