

TAYLOR PENTZ

Senior Software Engineer

taylorpentz2@gmail.com | 1601 Larkin, High Point, NC | +1 (980) 981-4522

<https://www.linkedin.com/in/taylor-p-b0389a3ba>

Professional Summary

Full-stack engineer with extensive experience designing, building, and scaling enterprise applications using **Python, Angular, Docker, AWS, GCP, SQL, and NoSQL databases**. Skilled at delivering robust, secure, and scalable software solutions with a proven ability to collaborate across cross-functional teams, mentor developers, and drive large-scale system modernization initiatives.

Technical Skills

- **Languages & Frameworks:** Python, Angular, Django, Flask, Node.js, TypeScript, JavaScript
- **Cloud & DevOps:** AWS, GCP, Docker, Kubernetes, CI/CD pipelines
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis, Cassandra
- **Other Tools:** Git, REST/GraphQL APIs, Agile/Scrum, Microservices Architecture

Professional Experience

SumatoSoft

Senior Software Engineer

Boston, MA (Remote) | Apr 2023 – Mar 2025

- Spearheaded the development of full-stack enterprise applications using Python and Angular, integrating cloud-native services on AWS and GCP to achieve scalable and resilient deployments.
- Designed backend microservices in Django and Flask, ensuring high performance and reliability with advanced caching strategies using Redis and NoSQL databases.
- Implemented containerization with Docker and Kubernetes, reducing deployment errors while enabling seamless horizontal scaling across cloud environments.
- Built complex Angular applications with state management, reusable UI components, and optimized performance for enterprise-level clients in financial and healthcare sectors.
- Enhanced data processing pipelines with SQL and NoSQL integration, optimizing read/write performance and ensuring reliable data flows across distributed systems.
- Partnered with cross-functional teams including product managers, designers, and QA engineers to deliver features aligned with business objectives and user needs.
- Automated CI/CD pipelines with GitHub Actions and Jenkins, significantly reducing manual intervention while improving code quality through test automation.
- Mentored junior engineers on best practices in full-stack development, cloud deployment, and clean coding principles to raise team-wide technical standards.

Hexaview Technologies Inc.

Software Engineer

New York, NY | Jul 2018 – Mar 2023

- Developed full-stack applications using Angular for dynamic frontends and Python Flask backends, achieving seamless integration through RESTful APIs and secure communication.
- Engineered scalable solutions with PostgreSQL and MongoDB, balancing SQL and NoSQL designs to optimize storage, retrieval, and analytics for diverse client projects.
- Deployed applications in Dockerized environments, ensuring consistency across staging and production environments while enabling quick rollback strategies.
- Optimized frontend Angular applications with lazy loading, modular architecture, and reusable components that significantly reduced load times and enhanced UX.
- Created backend services that interfaced with third-party APIs, including payment gateways and authentication providers, to expand client platform capabilities.
- Collaborated with DevOps teams to migrate workloads into AWS cloud infrastructure, leveraging services like EC2, S3, and RDS for secure and scalable deployments.
- Introduced automated testing suites with PyTest and Jasmine, strengthening regression detection while improving overall release confidence.
- Contributed to Agile sprints, ensuring timely delivery of features and providing technical input during planning and estimation phases.

SimbirSoft Company

Software Developer

Boston, MA | Mar 2015 – Jun 2018

- Developed robust backend systems using Python and Flask while implementing AngularJS interfaces for enterprise-scale clients in finance and retail industries.
- Designed normalized relational database schemas in SQL and incorporated MongoDB for high-volume unstructured data processing and analytics.
- Introduced Docker containers for local development and production deployment, improving portability and reducing integration issues across multiple environments.
- Delivered API-driven architectures that enabled third-party system integrations, supporting real-time communication and improving data accessibility.
- Participated in refactoring legacy monoliths into modular microservices, increasing maintainability, scalability, and system resilience.
- Enhanced frontend applications by implementing client-side caching, routing optimizations, and dynamic content rendering for performance improvements.
- Partnered with senior engineers and architects to establish coding standards and CI/CD practices that aligned with Agile delivery cycles.
- Researched and proposed cloud solutions in AWS to optimize hosting, storage, and compute resources while reducing operational costs.

Microsoft

Software Developer Intern

Cambridge, MA | Aug 2014 – Feb 2015

- Assisted in building scalable ASP.NET applications for enterprise clients, implementing secure authentication and authorization modules.

- Designed SQL Server queries and stored procedures for high-volume transaction systems while supporting optimization and schema refinement.
- Collaborated with senior developers on Azure deployments, learning cloud application management and best practices for enterprise reliability.
- Contributed to Agile team workflows by assisting in code reviews, writing test cases, and supporting integration testing for backend and frontend modules.
- Built internal dashboards for performance monitoring and debugging using C# and JavaScript, improving visibility and troubleshooting efficiency.
- Created proof-of-concept projects demonstrating new features in .NET Framework, presenting results to senior engineers for adoption consideration.
- Enhanced knowledge in version control, CI/CD pipelines, and Agile practices while supporting development of enterprise applications.
- Gained practical experience in full software lifecycle management through hands-on exposure to real client projects and product teams.

Projects

- **Enterprise Healthcare Dashboard:** Built a HIPAA-compliant healthcare dashboard using Python, Angular, and AWS, enabling real-time patient data visualization and secure reporting.
- **Financial Microservices Platform:** Designed a distributed microservices architecture using Flask, Docker, and PostgreSQL to support high-volume fintech transactions.
- **AI-Driven Analytics Tool:** Developed a data analytics platform integrating Python ML libraries and Angular visualizations to deliver predictive insights for business users.

Certifications

- AWS Certified Solutions Architect – Associate
- Google Cloud Professional Cloud Architect
- Docker Certified Associate
- Microsoft Certified: Azure Developer Associate

Education

University of North Carolina at Chapel Hill

Bachelor's Degree in Computer Science (2010 – 2014)
