

TAYLOR PENTZ

Senior Software Engineer

taylorpentz2@gmail.com | 1601 Larkin, High Point, NC | +1 (980) 981-4522

<https://www.linkedin.com/in/taylor-p-b0389a3ba>

Professional Summary

Senior Software Engineer with 9+ years of experience designing, developing, and scaling full-stack applications with strong expertise in **Python, Java, Go, and Node.js**. Skilled in building distributed systems, cloud-native applications, and high-availability services using **AWS, GCP, Docker, Kubernetes, SQL, and NoSQL databases**. Adept at Agile methodologies, CI/CD automation, and leading cross-functional collaboration to deliver enterprise-grade solutions.

Technical Skills

- ❖ **Languages & Frameworks:** Python, Java, Go, Node.js, Scala, JavaScript, TypeScript, Django, Flask, React, Angular, Spring Boot
- ❖ **Cloud & DevOps:** AWS (Lambda, EC2, S3, RDS), GCP (Cloud Run, BigQuery, Pub/Sub), Docker, Kubernetes, Jenkins, GitHub Actions, Terraform
- ❖ **Databases:** SQL (PostgreSQL, MySQL, MSSQL), NoSQL (MongoDB, DynamoDB, Redis, Cassandra)
- ❖ **Practices & Tools:** Agile/Scrum, CI/CD pipelines, REST & GraphQL APIs, Microservices, Event-driven architecture, Test-driven development, Monitoring (Prometheus, Grafana)

Professional Experience

SumatoSoft

Senior Software Engineer

Boston, MA (Remote) | Apr 2023 – Mar 2025

- Designed and implemented scalable Python microservices integrated with AWS and GCP cloud services, ensuring high performance and reliability under enterprise workloads.
- Optimized full-stack applications by implementing asynchronous processing and caching layers with Redis and DynamoDB, significantly improving response times.
- Built CI/CD pipelines with Docker, Kubernetes, and GitHub Actions, automating deployment processes and reducing manual intervention across multiple environments.
- Collaborated with product managers, UX teams, and QA engineers to deliver features in Agile sprints, ensuring adherence to deadlines and customer expectations.
- Refactored legacy monolithic applications into modular microservices, enabling better maintainability, scalability, and resilience for distributed systems.
- Implemented secure authentication and role-based access controls with OAuth2 and JWT, aligning with best practices for data privacy and compliance standards.
- Introduced monitoring and logging solutions with Prometheus, Grafana, and ELK stack to improve incident response time and system observability.
- Mentored junior developers, conducted code reviews, and established coding guidelines to maintain high-quality standards across all deliverables.

Hexaview Technologies Inc.

Software Engineer

New York, NY | Jul 2018 – Mar 2023

- Developed robust backend systems using Python and Java, integrating with SQL and NoSQL databases to support real-time data processing and analytics.
- Implemented RESTful and GraphQL APIs consumed by React and Angular frontends, ensuring seamless integration between client and server layers.
- Deployed cloud-based solutions on AWS and GCP using Docker containers, reducing infrastructure complexity and ensuring consistent runtime environments.
- Automated testing and CI/CD workflows, reducing release times and improving overall deployment reliability across staging and production environments.
- Enhanced performance of existing systems by introducing caching strategies, asynchronous processing, and optimized database queries for high-traffic workloads.
- Participated in Agile ceremonies, backlog grooming, and sprint planning to align engineering output with evolving business requirements.
- Contributed to cloud migration initiatives, re-architecting legacy applications for containerized deployments with Kubernetes.
- Collaborated closely with cross-functional teams to ensure requirements were well-defined, technically feasible, and implemented with scalable architectures.

SimbirSoft Company

Software Developer

Boston, MA | Mar 2015 – Jun 2018

- Built and maintained web applications using Python and Node.js, implementing microservices architectures that supported business scalability and innovation.
- Developed backend integrations with PostgreSQL and MongoDB databases, ensuring data integrity and high availability across multiple services.
- Containerized applications with Docker, streamlining the development lifecycle and enabling more consistent deployments across various environments.
- Wrote and optimized SQL queries and database schemas, improving system performance and reducing query execution times under heavy loads.
- Integrated third-party APIs and services into business platforms, extending system functionality and supporting partner ecosystem integrations.
- Participated in Agile practices, delivering features incrementally and adapting to changing business priorities through iterative development.
- Conducted peer code reviews and applied design patterns to enhance maintainability, scalability, and readability of the software base.
- Contributed to the adoption of CI/CD processes and DevOps practices, accelerating delivery pipelines and improving release quality.

Microsoft

Software Developer Intern

Cambridge, MA | Aug 2014 – Feb 2015

- Assisted in the development of internal tools using Python and C#, enhancing automation and productivity within the engineering team.
- Contributed to prototype solutions involving cloud integrations, experimenting with Azure and early containerization practices to support scalability.
- Implemented unit tests and debugging utilities to improve software reliability and reduce regression issues in iterative releases.
- Collaborated with senior engineers to identify and resolve performance bottlenecks across backend components.
- Participated in team code reviews, documentation efforts, and Agile sprints to gain exposure to professional engineering workflows.
- Supported deployment and monitoring of small-scale applications, gaining experience in cloud infrastructure and CI/CD pipelines.
- Created scripts for process automation, reducing manual workload for recurring tasks and improving engineering efficiency.
- Learned and applied software engineering best practices, setting the foundation for subsequent career growth.

Projects

- ❖ **Distributed Analytics Platform** – Built a Python-based analytics system with AWS and GCP integrations to handle large-scale real-time data ingestion and reporting.
- ❖ **Cloud Migration Toolkit** – Designed a containerized migration solution using Docker and Kubernetes to modernize legacy applications and streamline deployments.
- ❖ **Healthcare API Gateway** – Implemented secure microservice APIs with Python, Node.js, and MongoDB, enabling interoperability across healthcare platforms.

Certifications

- ❖ AWS Certified Solutions Architect – Associate
- ❖ Google Cloud Professional Cloud Developer
- ❖ Docker Certified Associate

Education

University of North Carolina at Chapel Hill

Bachelor's Degree in Computer Science (2010 – 2014)
