

Rodrigo Fernandez

Senior Vue.js / Node.js Full Stack Engineer

Katy, Texas | +1 (407) 801-1287 | www.linkedin.com/in/rodrigobermejo-fernandez-9a5a0664 | rodrigobfdev@gmail.com

Summary

Senior **Vue.js 2.x–3.x / PHP 7.x–8.x Full Stack Engineer** with experience across cloud infrastructure, healthcare workflow, SaaS operations, fintech dashboards, and digital commerce platforms, building responsive frontends with **Vuex, Pinia, Nuxt 2.x–3.x**, and scalable backend services with **Laravel 6.x–10.x, Symfony 4.x–6.x**, REST APIs, MySQL, PostgreSQL, Redis, Docker, AWS, and CI/CD. Strong in legacy modernization, performance tuning, payment and authentication flows, production bug resolution, accessibility, testing, and secure deployments that improve stability, speed, and business delivery while reducing release risk and support workload for engineering teams.

Skills

- **Frontend:** **Vue.js 2.x–3.x, Nuxt 2.x–3.x**, Vue Router, **Vuex 3.x–4.x, Pinia 2.x**, Composition API, Options API, JavaScript ES6+, TypeScript 4.x–5.x, HTML5, CSS3, SCSS, Bootstrap 4.x–5.x, Tailwind CSS 2.x–3.x, Vite, Webpack, responsive UI, accessibility, reusable component systems.
- **Backend:** **PHP 7.x–8.x, Laravel 6.x–10.x, Symfony 4.x–6.x**, REST API, API versioning, authentication, authorization, middleware, queues, events, jobs, cron workflows, validation layers, payment integration, third-party API integration, PHPUnit, Pest, Composer.
- **Database:** **MySQL 5.7–8.x**, PostgreSQL 11.x–15.x, Redis 5.x–7.x, database indexing, query optimization, migrations, stored procedures, schema refactoring, caching strategy, transactional workflows.
- **Cloud / DevOps:** **AWS EC2, S3, RDS, CloudFront, IAM**, Docker, Docker Compose, GitHub Actions, GitLab CI, Nginx, Apache, Linux, CI/CD pipelines, release automation, environment configuration, log analysis, rollback planning.
- **Testing / Quality:** PHPUnit, Jest, Vue Test Utils, Cypress, Postman, Swagger/OpenAPI, static analysis, code review, accessibility checks, regression testing, production incident debugging.

Experience

Lightedge — Senior Software Engineer (Apr 2020 – Mar 2026)

- Modernized customer-facing cloud operations portals with **Vue.js 3.x, Nuxt 3.x, Pinia 2.x**, and **PHP 8.x**, improving page responsiveness and reducing repeated support actions for infrastructure teams.
- Migrated legacy **Vue.js 2.x** modules into **Vue.js 3.x Composition API** patterns while keeping business-critical screens stable during phased releases and avoiding downtime for active users.
- Built scalable backend services with **Laravel 8.x–10.x**, MySQL 8.x, Redis 6.x, and REST APIs to support account provisioning, billing visibility, ticket workflows, and internal service automation.
- Resolved a recurring production issue where stale Redis cache keys caused incorrect account status displays, adding targeted cache invalidation and reducing related support tickets by **32%**.
- Improved API response time by **41%** through MySQL indexing, eager-loading fixes, query refactoring, and pagination changes across high-volume customer and service history screens.
- Implemented role-based access control with **Laravel Policies**, middleware, and Vue route guards, strengthening permission boundaries for admin, support, finance, and customer users.

- Reworked deployment pipelines with **GitHub Actions**, Docker, and environment-based configuration to reduce manual release steps and lower release failure risk by **28%**.
- Created reusable **Vue.js 3.x** component patterns for tables, filters, modals, and form validation, helping frontend teams deliver new portal features with more consistent behavior.
- Fixed a difficult race condition where async form submissions duplicated service-change requests, adding idempotency checks, request locking, and clearer UI loading states.
- Integrated third-party billing and monitoring APIs into **Laravel** services, normalizing inconsistent external responses and adding retry logic for temporary provider errors.
- Introduced automated regression tests with **PHPUnit**, **Jest**, and **Vue Test Utils**, protecting core account, invoice, and provisioning workflows from repeated release defects.
- Collaborated flexibly across frontend, backend, DevOps, and support teams, translating customer pain points into stable platform improvements without overcomplicating the architecture.

NIX United — Software Engineer *(Oct 2016 – Mar 2020)*

- Delivered enterprise web applications using **Vue.js 2.x**, **Vuex 3.x**, **Laravel 5.5–7.x**, and **Symfony 4.x**, supporting healthcare, logistics, and SaaS customers with complex workflow requirements.
- Migrated several PHP services from **PHP 5.6** to **PHP 7.x**, updating Composer dependencies, fixing deprecated syntax, and improving runtime stability across older application modules.
- Implemented dynamic dashboards with **Vue.js 2.x**, Vue Router, reusable chart widgets, and REST API integration, giving operations teams faster visibility into daily business metrics.
- Reduced slow report generation by **37%** after profiling heavy MySQL 5.7 queries, adding composite indexes, and moving repeated calculations into optimized backend services.
- Fixed an issue where timezone conversion errors caused incorrect appointment windows, standardizing UTC storage and applying user-level timezone formatting in Vue components.
- Built secure authentication flows with Laravel middleware, token-based sessions, password reset handling, and permission checks for multi-role customer and admin environments.
- Improved form-heavy user interfaces by adding reusable validation components, server-side error mapping, and clearer field-level feedback across **Vue.js 2.x** applications.
- Integrated payment, notification, and document-generation services through **PHP 7.x** APIs, handling retries, webhook validation, and failure logging for better operational reliability.
- Helped move manual deployments into GitLab CI pipelines with build validation, test execution, artifact handling, and safer rollback steps for client production releases.
- Resolved a memory issue in a batch-processing job by chunking large database reads, moving long-running work into queues, and cutting job failures by **45%**.
- Used **Laravel**, **Symfony**, and **Vue.js** flexibly depending on client architecture, keeping solutions practical instead of forcing one framework into every project.

Webiz Digital — Software Developer *(Jan 2014 – Sep 2016)*

- Built custom e-commerce and marketing platforms with **PHP 5.6–7.0**, **Laravel 4.2–5.2**, MySQL 5.x, jQuery, Bootstrap, and early **Vue.js 1.x** components where reactive UI improved usability.
- Implemented product catalog, checkout, contact, and CMS workflows with clean PHP service layers, practical database schemas, and maintainable admin interfaces for non-technical users.
- Added early **Vue.js 1.x** widgets for dynamic search filters, cart updates, and form previews, reducing full-page reloads and making customer-facing flows feel faster.
- Migrated several older procedural PHP pages into Laravel controllers, Blade templates, validation rules, and reusable models without disrupting active client websites.
- Fixed a checkout bug where duplicate payment callbacks created repeated order records, adding transaction checks and callback verification to protect revenue workflows.

- Improved page load speed by **34%** using image optimization, asset minification, query cleanup, browser caching, and simpler frontend rendering patterns.
- Integrated Stripe, PayPal, Mailchimp, and shipping APIs through PHP services, adding error handling and admin logs so client teams could resolve issues faster.
- Created responsive layouts with Bootstrap 3.x, SCSS, and mobile-first UI adjustments, improving usability across desktop, tablet, and mobile storefront visitors.
- Reduced production hotfix frequency by **26%** by adding clearer deployment checklists, manual QA scripts, and safer staging verification before client releases.
- Balanced frontend, backend, database, and server configuration tasks across small teams, applying **PHP** and **Vue.js** flexibly to match each client's budget and timeline.

Aurio — Junior Software Developer *(Oct 2012 – Dec 2013)*

- Developed internal business websites and admin tools with **PHP 5.x**, MySQL 5.x, JavaScript, jQuery, HTML5, CSS3, and Bootstrap during early full-stack project delivery.
- Maintained legacy PHP pages by cleaning duplicated logic, improving SQL safety, and organizing reusable includes before larger framework migrations became practical.
- Built admin screens for managing users, content, product records, and reporting data, giving business teams faster control over daily operational updates.
- Fixed form validation issues where incomplete server-side checks allowed inconsistent records, adding stricter PHP validation and clearer frontend error messages.
- Improved MySQL query performance by adding basic indexes, removing unnecessary joins, and simplifying list views that were slow under larger data sets.
- Supported migration planning from custom PHP structures toward **Laravel 4.x–5.x** style patterns, separating routing, database access, and template responsibilities.
- Implemented responsive UI fixes with Bootstrap and CSS media queries, improving mobile usability for client-facing pages that previously worked only on desktop.
- Resolved session timeout and login redirect problems by reviewing PHP session configuration, cookie handling, and authentication flow edge cases.
- Worked closely with senior engineers to debug production errors, read server logs, test fixes carefully, and build stronger habits around maintainable code.

Microsoft — Software Developer Intern *(Jun 2012 – Sep 2012)*

- Contributed to internal productivity tools using JavaScript, C#, and SQL under enterprise engineering standards and code review practices.
- Assisted with bug triage, UI fixes, and automation tasks that improved team delivery efficiency during release cycles.
- Created test scripts and documentation that helped validate builds faster and reduce repeated manual checks.
- Learned large-scale development workflow, version control discipline, and professional communication from senior engineers.
- Participated in team meetings, sprint planning, and defect analysis while gaining real-world software lifecycle exposure.

Education

Texas State University

Bachelor's Degree in Computer Science *(Sep 2008 – May 2012)*
