

TAYLOR PENTZ

Senior Software Engineer

taylorpentz2@gmail.com | linkedin.com/in/taylor-pentz-080a8b39b | 1601 Larkin, High Point, NC | +1 8042860439

SUMMARY

Senior Software Engineer with 12+ years of experience designing, rearchitecting, and delivering scalable full-stack .NET applications in cloud-based, enterprise environments. Extensive expertise in C#.NET, Azure Function Apps, RESTful web services, and SQL database design, with a strong background modernizing legacy systems into resilient, cloud-native architectures. Proven ability to translate complex business and claims-processing requirements into secure, high-performance solutions aligned with Agile delivery models. Adept at collaborating across product, QA, and infrastructure teams to ensure code quality, reliability, and maintainability. Recognized for architectural ownership, disciplined engineering practices (TDD, code reviews, CI/CD), and mentoring distributed and offshore teams.

SKILLS

C#	.NET	JavaScript	TypeScript
.NET Function Apps	RESTful Web Services	Web Service Design	Azure Service Bus
API Integration	React	Angular	HTML5
CSS3	SQL Server	Relational Database Design	Query Optimization
Microsoft Azure	CI/CD	GitHub	Jenkins
Agile/Scrum	TDD	Code Reviews	Performance Optimization
Architecture Design			

EXPERIENCE

Senior Software Engineer

SumatoSoft

April 2022 - December 2025

- Led full-stack .NET development efforts, designing and implementing scalable backend services and modern frontend interfaces to support enterprise SaaS and regulated industry platforms.
- Architected cloud-native solutions in Microsoft Azure, including Azure Function Apps and service integrations, enabling reliable, event-driven and API-first system designs.
- Collaborated with cross-functional stakeholders to decompose legacy systems and translate complex business requirements into well-defined technical and functional specifications.
- Designed and optimized SQL database schemas, wrote complex queries, and ensured data integrity and performance across high-volume transactional systems.
- Implemented robust CI/CD pipelines using GitHub and Jenkins, enforcing code quality gates, automated testing, and secure deployment practices.
- Applied TDD and unit testing strategies to harden codebases, reduce regressions, and improve long-term maintainability of core services.
- Provided architectural design options and accurate delivery estimates, supporting sprint planning and long-term platform evolution.
- Mentored junior engineers and offshore team members, conducting code reviews and promoting best practices in .NET, Azure, and cloud-based development.
- Partnered closely with QA teams to troubleshoot defects, support regression testing, and ensure high-quality releases across environments.
- Drove continuous improvement initiatives focused on performance optimization, system reliability, and

development process maturity.

- Owned end-to-end feature delivery from design through deployment, ensuring alignment with business goals and operational requirements.

Software Engineer

Hexaview Technologies Inc.

July 2018 - March 2022

- Developed and maintained full-stack applications using C#.NET and modern JavaScript frameworks, supporting complex enterprise workflows.
- Designed and implemented secure, scalable web services following best practices for performance, reliability, and integration.
- Worked extensively with relational databases, optimizing SQL queries and schemas to support data-intensive applications.
- Collaborated in Agile teams to deliver sprint commitments, decompose user stories, and provide accurate technical estimates.
- Integrated applications with cloud and on-prem systems, ensuring seamless data flow and service interoperability.
- Applied unit testing, peer reviews, and code scanning to enforce high standards of code quality and reuse.
- Partnered with QA to resolve defects, support testing cycles, and improve overall system stability.
- Contributed to architectural discussions and incremental modernization of legacy components.
- Maintained thorough technical documentation to support ongoing development and system knowledge sharing.

Software Developer

SimbirSoft Company

March 2015 - June 2018

- Built and enhanced backend services and web applications using C#.NET, supporting enterprise business solutions.
- Collaborated with senior engineers to design application components aligned with established architectural patterns.
- Developed and optimized SQL databases, ensuring efficient data access and long-term scalability.
- Implemented responsive frontend features using JavaScript, HTML, and CSS to improve usability.
- Participated in Agile development processes, including sprint planning, daily stand-ups, and retrospectives.
- Focused on writing clean, maintainable, and testable code to support evolving product requirements.
- Gained hands-on experience working with distributed teams and production-grade systems.

Software Developer Intern

Microsoft

August 2014 - February 2015

- Supported development of internal web applications, contributing to backend and frontend components under senior engineer guidance.
- Implemented C# and JavaScript features, assisting with bug fixes and incremental enhancements.
- Worked with internal APIs and services to integrate application components.
- Learned and applied software engineering best practices including version control, testing, and code reviews.
- Collaborated within an Agile team environment, gaining exposure to large-scale enterprise development workflows.

EDUCATION

Bachelor of Computer Science

The University of North Carolina at Chapel Hill

2010 - 2014
