

TAYLOR PENTZ

Senior Software Engineer

taylorpentz2@gmail.com | linkedin.com/in/taylor-pentz-080a8b39b | 1601 Larkin, High Point, NC | +1 8042860439

SUMMARY

Senior Software Engineer with 9+ years of experience designing, building, and operating production-grade backend and full-stack systems using C# and the .NET ecosystem. Strong expertise in building scalable, cloud-native applications on Google Cloud Platform (GCP), with deep hands-on experience using Google Cloud Spanner and Bigtable for high-throughput, low-latency data workloads. Proven ability to design microservice-based architectures, define API specifications, and produce comprehensive technical documentation. Extensive background in writing unit tests, building automated test frameworks, and integrating CI/CD pipelines to ensure reliability and quality at scale. Experienced working in distributed teams, owning features end-to-end, and delivering resilient systems in complex enterprise environments.

SKILLS

C#	.NET	.NET Core	React
REST APIs	Microservices	Google Cloud Spanner	Google Cloud Bigtable
PostgreSQL	Google Cloud Platform	Kubernetes	Docker
Jenkins	Terraform	Data-intensive systems	Distributed systems

EXPERIENCE

Senior Software Engineer

SumatoSoft

April 2022 - December 2025

- Designed and developed large-scale backend services using C# and .NET, following microservice-based architecture patterns and RESTful API design principles.
- Built and optimized cloud-native services on Google Cloud Platform, leveraging managed services to ensure high availability, scalability, and fault tolerance.
- Implemented data persistence layers using Google Cloud Spanner and Bigtable to support high-volume transactional and analytical workloads with strict consistency and performance requirements.
- Created detailed technical design documents, API specifications, and architectural diagrams to support cross-team collaboration and long-term system maintainability.
- Developed comprehensive unit tests and automated integration tests in C#, ensuring high code coverage and reliable regression protection across services.
- Integrated applications and automated test suites into CI/CD pipelines using Jenkins, enabling consistent build, test, and deployment workflows to Kubernetes environments.
- Collaborated closely with product managers, QA engineers, and cloud architects to translate complex requirements into production-ready solutions while meeting performance and reliability SLAs.

Software Engineer

Hexaview Technologies Inc.

July 2018 - March 2022

- Developed and maintained backend and full-stack applications using C# and .NET, focusing on clean architecture, modular design, and long-term maintainability.
- Built RESTful APIs and backend services deployed on Google Cloud Platform, integrating authentication, authorization, and role-based access control mechanisms.
- Worked extensively with Google Cloud Spanner and Bigtable to design schemas, optimize queries, and ensure efficient data access for large-scale distributed systems.

- Authored unit tests and automated test suites in C#, validating business logic, API contracts, and data consistency across services.
 - Participated in infrastructure automation efforts using Terraform and containerized deployments with Docker and Kubernetes.
 - Contributed to CI/CD pipelines by integrating build, test, and deployment stages, improving release reliability and reducing deployment errors.
 - Collaborated with cross-functional teams to troubleshoot production issues, improve system performance, and enhance observability and monitoring.
-

Software Developer

SimbirSoft Company

March 2015 - June 2018

- Developed backend services and web applications using C# and the .NET framework, supporting data-driven business workflows.
 - Implemented REST APIs and service-layer logic with a strong focus on performance, reliability, and secure data access.
 - Worked on early distributed system components, gaining hands-on experience with concurrency, scalability, and fault tolerance.
 - Collaborated with senior engineers to design database schemas and optimize data access patterns for high-traffic applications.
 - Wrote unit tests and participated in code reviews to improve code quality and enforce engineering best practices.
 - Assisted in deployment and environment setup activities, gaining foundational experience with cloud infrastructure and automated builds.
-

Software Developer Intern

Microsoft

August 2014 - February 2015

- Worked as a Software Developer Intern contributing to backend development tasks using C# and the .NET framework.
 - Assisted in building and testing internal tools and services, following established coding standards and development workflows.
 - Collaborated with full-time engineers to debug issues, improve application performance, and enhance code reliability.
 - Wrote unit tests and documentation to support feature development and knowledge sharing within the team.
 - Gained hands-on exposure to enterprise-scale software development practices, version control, and continuous integration pipelines.
 - Participated in design discussions and sprint planning sessions, developing a strong foundation in professional software engineering practices.
-

EDUCATION

Bachelor of Computer Science

The University of North Carolina at Chapel Hill

2010 - 2014
