

TAYLOR PENTZ

Senior Software Engineer

taylorpentz2@gmail.com | linkedin.com/in/taylor-pentz-080a8b39b | 1601 Larkin, High Point, NC | +1 8042860439

SUMMARY

Senior Software Engineer with 9+ years of experience building and owning backend and full-stack systems in high-scale, production environments. Strong background in designing event-driven architectures, scalable APIs, and reliable data-intensive platforms using TypeScript, Node.js, AWS, and SQL. Proven ability to take systems from zero-to-one and scale them reliably in fast-moving, high-ownership environments. Experienced working closely with product and business stakeholders to translate ambiguous requirements into measurable, revenue-impacting features. Known for operating with autonomy, maintaining high engineering standards, and building systems that emphasize reliability, performance, and long-term maintainability.

SKILLS

TypeScript	JavaScript	Node.js	REST APIs
Event-Driven Architectures	React	PostgreSQL	SQL Data Modeling
AWS	SQS	CI/CD	Infrastructure Reliability

EXPERIENCE

Senior Software Engineer

SumatoSoft

April 2022 - December 2025

- Designed and implemented backend systems using Node.js and TypeScript, supporting high-traffic, production workloads with a strong emphasis on reliability and fault tolerance.
- Built and scaled event-driven architectures leveraging AWS services such as SQS to enable asynchronous processing, decoupled services, and improved system resilience.
- Owned SQL data model design and optimization, creating schemas and queries that supported complex business workflows while maintaining performance at scale.
- Collaborated closely with product managers and designers to take features from zero-to-one, iterating quickly while ensuring production-ready quality and observability.
- Led architectural discussions and made key technical decisions that improved system scalability, reduced operational overhead, and supported long-term platform growth.
- Acted as a high-ownership contributor in a distributed team, mentoring peers, reviewing code, and driving best practices across backend and cloud infrastructure.

Software Engineer

Hexaview Technologies Inc.

July 2018 - March 2022

- Developed and maintained backend services and APIs using JavaScript and Node.js, supporting enterprise clients with scalable, production-grade solutions.
- Implemented event-driven patterns and background processing to handle asynchronous workloads and improve overall system responsiveness.
- Designed and optimized PostgreSQL schemas and SQL queries, ensuring data integrity, efficient access patterns, and long-term maintainability.
- Worked closely with cross-functional teams to deliver features end-to-end, from backend logic through to frontend integration.
- Improved system reliability by identifying performance bottlenecks, refactoring legacy components, and introducing monitoring and logging best practices.

- Contributed to CI/CD pipelines and deployment workflows, enabling faster and more reliable releases across multiple environments.

Software Developer

SimbirSoft Company

March 2015 - June 2018

- Built backend services and internal tools supporting data-heavy business workflows in production environments.
- Contributed to API design and implementation using JavaScript-based stacks, ensuring clean interfaces and reliable integrations.
- Worked on early distributed system components, gaining hands-on experience with scalability, fault tolerance, and performance tuning.
- Collaborated with senior engineers to improve existing systems, refactor legacy code, and introduce better architectural patterns.
- Participated in requirements analysis and technical design discussions, helping translate business needs into maintainable software solutions.
- Developed a strong foundation in production debugging, system monitoring, and long-term code ownership.

Software Developer Intern

Microsoft

August 2014 - February 2015

- Worked as a software development intern on internal engineering tools, contributing production-quality code under the guidance of senior engineers.
- Assisted in building and improving backend components, focusing on correctness, performance, and maintainability.
- Collaborated with a cross-functional team in an agile environment, participating in code reviews, stand-ups, and sprint planning.
- Learned industry best practices around testing, version control, and large-scale codebases.
- Gained exposure to enterprise-scale software development processes and engineering standards.
- Built a strong foundation in professional software engineering that accelerated future full-time roles.

EDUCATION

Bachelor of Computer Science

The University of North Carolina at Chapel Hill

2010 - 2014
