SUMMARY

Senior Software Engineer and hands-on technical leader with 10+ years of experience designing, building, and operating cloud-native platforms in production environments. Deep expertise across Java 21 and Spring Boot microservices, Python-based systems using Django and Flask, real-time Node.js services, and modern React frontends. Proven ability to lead architecture and delivery while remaining deeply involved in day-to-day coding, code reviews, and production troubleshooting. Extensive experience building scalable, secure systems on Microsoft Azure using App Service, Container Apps, Functions, Service Bus, Key Vault, Managed Identity, and Application Insights. Known for a quality-first mindset with strong emphasis on automated testing, observability, security, performance, and mentoring distributed engineering teams.

SKILLS

Java	Python	JavaScript	TypeScript
C#	React	HTML	CSS
Spring Boot	Django	Flask	Node.js
Express	REST APIs	WebSockets	Socket.IO
SQL Server	PostgreSQL	Microsoft Azure	Azure App Service
Azure Container Apps	Azure Functions	Azure Service Bus	Azure Key Vault
Managed Identity	Azure Monitor	Application Insights	APIM
CI/CD	Jenkins	Git	Conversational AI
Azure OpenAI	Azure AI Search		

EXPERIENCE

Senior Software Engineer

SumatoSoft

April 2022 - December 2025

- Led architecture and hands-on delivery of cloud-native platforms built with Java 21 and Spring Boot, Python microservices using Django and Flask, and React-based user interfaces deployed on Microsoft Azure.
- Designed, implemented, and maintained production-grade REST APIs, background processing workflows, and event-driven services using Azure Service Bus with retries, dead-letter queues, idempotency, and resiliency best practices.
- Built and scaled real-time systems using Node.js, Express, and Socket.IO, including secure WebSocket connections, room and namespace design, and multi-instance scaling strategies.
- Owned security and identity integrations across services using Azure Key Vault, Managed Identity, OAuth2/OIDC, JWT, and Azure AD/Entra ID, ensuring enterprise-grade authentication and secrets management.
- Instrumented services with Application Insights, Azure Monitor, and OpenTelemetry, implemented health checks, and led production incident response and root-cause analysis to improve reliability and performance.
- Mentored offshore and distributed engineers through detailed PR reviews, pair programming, architectural guidance, and the establishment of engineering standards and testing practices.

Software Engineer

Hexaview Technologies Inc.

July 2018 - March 2022

- Developed and maintained backend services using Java and Spring Boot as well as Python-based APIs, focusing on clean API design, performance, and long-term maintainability.
- Implemented SQL Server schemas, complex T-SQL queries, and deployment scripts with an emphasis on transactional integrity, query optimization, and CI/CD-friendly migrations.
- Built frontend features using React and JavaScript, collaborating closely with product and design teams to deliver responsive, user-focused functionality.
- Integrated services with Microsoft Azure components including App Service, Azure Functions, Blob Storage, and Application Insights for monitoring and diagnostics.
- Contributed to automated testing strategies using JUnit, Mockito, and pytest, significantly improving test coverage and reducing production defects.
- Participated actively in code reviews and architectural discussions, helping guide best practices across distributed development teams.

Software Developer

SimbirSoft Company

March 2015 - June 2018

- Built and supported backend services using Java and Python, contributing to the development of scalable web applications and internal platforms.
- Designed and implemented RESTful APIs, focusing on consistency, versioning strategies, and reliability in production environments.
- Worked extensively with relational databases, writing optimized SQL queries and improving schema designs to support growing data volumes.
- Collaborated with senior engineers on system design decisions, gaining hands-on experience with distributed systems and microservice architectures.
- Assisted with production support, debugging complex issues, and improving application stability through better logging and monitoring practices.
- Developed a strong foundation in software engineering best practices, including code quality, documentation, and collaborative development workflows.

Software Developer Intern

Microsoft

August 2014 - February 2015

- Worked as a software development intern contributing to enterprise-grade applications within a large-scale engineering organization.
- Assisted in developing and testing backend components, gaining exposure to production-quality coding standards and review processes.
- Collaborated with full-time engineers to troubleshoot bugs, improve existing features, and deliver incremental enhancements.
- Learned and applied best practices for source control, automated testing, and continuous integration in a professional environment.
- Gained early experience working within cross-functional teams and aligning technical work with product and business requirements.

EDUCATION

Bachelor of Computer Science

The University of North Carolina at Chapel Hill

2010 - 2014
