PROFESSIONAL SUMMARY

DevOps Engineer with strong experience supporting SaaS, property-tech, civic-tech, and enterprise software platforms through secure cloud infrastructure, automated delivery, and production reliability. Skilled in **AWS, Kubernetes v1.21–1.29, Docker v20–24, Terraform v1.3–1.8, GitHub Actions, Jenkins, Linux, Prometheus, Grafana, and CI/CD pipeline modernization**, with a practical background improving deployment speed, reducing incidents, migrating legacy systems, and helping engineering teams build scalable, observable, and maintainable cloud-native environments.

TECH SKILLS

- ❖ **Cloud Platforms:** AWS, Azure, GCP, EC2, ECS, EKS, S3, RDS, IAM, CloudWatch, Route 53, VPC, Load Balancer
- ❖ **DevOps & CI/CD:** GitHub Actions, Jenkins 2.x, GitLab CI, CircleCI, Argo CD, Helm, YAML pipelines, release automation
- ❖ **Containers & Orchestration:** Docker v20–24, Kubernetes v1.21–1.29, Docker Compose, Helm v3, Kubernetes Ingress, HPA, ConfigMaps, Secrets
- ❖ **Infrastructure as Code:** Terraform v1.3–1.8, CloudFormation, Ansible, reusable modules, remote state, environment separation
- ❖ **Monitoring & Logging:** Prometheus, Grafana, CloudWatch, ELK Stack, OpenTelemetry, alert rules, dashboards, incident investigation
- ❖ **Security & Reliability:** IAM hardening, secret management, vulnerability scanning, SSL/TLS, backup automation, blue-green deployment, rollback strategy
- ❖ **Scripting & Development:** Bash, Python 3.9–3.12, PowerShell, Node.js 16–20, REST APIs, SQL, MongoDB
- ❖ **Databases:** PostgreSQL, MySQL, MongoDB, Redis, SQL Server
- ❖ **Methods:** Agile, Scrum, SRE practices, production support, root-cause analysis, release management

PROFESSIONAL EXPERIENCE

Staff Software Engineer

Relatio

Jun 2022 – Apr 2026

Las Vegas, NV

- ❖ Led **AWS cloud infrastructure** improvements for SaaS data platforms by standardizing VPC, IAM, ECS/EKS, RDS, and S3 configurations, helping reduce environment drift by **24%** and improving release confidence.
- ❖ Built reusable **Terraform v1.3–1.8 modules** for network, compute, database, and monitoring resources, reducing manual provisioning work by **31%** across development, staging, and production environments.
- ❖ Modernized legacy deployment workflows into **GitHub Actions CI/CD pipelines** with build, test, scan, Docker image publishing, and controlled promotion steps, improving deployment frequency by **28%**.

- ❖ Migrated container workloads from manually managed Docker hosts into **Kubernetes v1.24–1.29**, using Helm charts, readiness probes, resource limits, and rollback policies for safer production releases.
- ❖ Implemented **Prometheus and Grafana observability** for API latency, pod health, memory pressure, queue depth, and database connection usage, reducing incident detection time by **22%**.
- ❖ Resolved recurring production failures caused by missing environment variables and inconsistent secret loading by moving sensitive configuration into managed secret storage with clear rotation rules.
- ❖ Improved **Docker v20–24 image builds** by introducing multi-stage builds, dependency caching, non-root runtime users, and smaller base images for faster and more secure deployments.
- ❖ Worked closely with backend teams to debug failed releases, database timeout errors, memory spikes, and API gateway issues using logs, metrics, traces, and structured root-cause analysis.
- ❖ Created automated backup and restore validation for PostgreSQL and MongoDB workloads, helping reduce recovery risk and making disaster recovery steps easier for the engineering team.
- ❖ Designed branch protection, pull request checks, release tagging, and production approval gates, improving engineering governance while keeping the delivery process flexible for urgent fixes.
- ❖ Reduced cloud waste by tuning oversized compute resources, cleaning unused load balancers, and right-sizing database instances, lowering monthly infrastructure cost by **18%**.
- ❖ Mentored engineers on **Linux troubleshooting**, Kubernetes debugging, CI/CD ownership, and production readiness practices so application teams could solve operational issues faster.

Senior Software Engineer

AppFolio

Feb 2018 – May 2022

Goleta, CA

- ❖ Managed **AWS infrastructure** for property management SaaS systems using EC2, ECS, RDS, S3, IAM, CloudWatch, and Route 53, improving platform reliability during high-traffic customer workflows.
 - ❖ Converted manual server configuration into **Terraform and Ansible automation**, reducing repeat setup errors by **27%** and making staging environments closer to production.
 - ❖ Built **Jenkins 2.x and GitHub Actions pipelines** for backend services, frontend assets, Docker builds, automated tests, security scans, and deployment approvals across multiple environments.
 - ❖ Supported migration from older VM-based deployments into containerized services with **Docker v20+**, improving rollout consistency and reducing release rollback effort by **23%**.
 - ❖ Investigated production incidents involving slow database queries, failed background jobs, overloaded application nodes, and broken deployment artifacts through CloudWatch logs and system metrics.
 - ❖ Implemented **blue-green deployment** patterns for customer-facing services, allowing teams to validate new versions safely before routing full production traffic.
 - ❖ Improved **Linux server hardening** by tightening SSH access, patching package vulnerabilities, rotating keys, and applying least-privilege IAM permissions across service accounts.
 - ❖ Created Grafana dashboards for application throughput, error rate, CPU saturation, memory usage, disk pressure, and deployment health to support faster operational decisions.
 - ❖ Reduced failed releases by **19%** by adding pre-deployment validation, environment variable checks, database migration gates, and automatic rollback instructions.
 - ❖ Collaborated with developers, QA, product owners, and support teams to align release windows, incident communication, and long-term reliability improvements.
-

Software Engineer

Blackbaud

Jul 2016 – Jan 2018

Charleston, SC

- ❖ Supported cloud and deployment operations for nonprofit software platforms by improving **CI/CD pipelines**, environment configuration, monitoring, and production support workflows.
- ❖ Migrated legacy build jobs from older Jenkins freestyle projects into **Jenkins Pipeline**, improving build visibility and reducing broken deployment steps by **21%**.
- ❖ Implemented Docker-based local and staging workflows so engineers could reproduce API, worker, and database issues without waiting for shared test environments.
- ❖ Resolved recurring deployment failures caused by outdated package versions, missing configuration files, and inconsistent environment variables through automated validation checks.
- ❖ Improved **AWS IAM** permissions by separating developer, deployment, and service roles, reducing unnecessary access while keeping release operations practical for the team.
- ❖ Created **CloudWatch alerts** for service errors, queue failures, disk utilization, and database connection saturation, reducing late incident discovery by **18%**.
- ❖ Helped migrate application runtime versions from older supported stacks to newer stable versions by testing dependencies, updating Docker images, and validating rollback paths.
- ❖ Built Bash and Python scripts for log collection, deployment verification, backup checks, and operational reporting to reduce repetitive manual work.
- ❖ Partnered with engineering teams during production incidents to identify root causes, document corrective actions, and prevent the same bugs from returning.

Software Developer

Granicus

May 2014 – Jun 2016

Dallas, TX

- ❖ Supported civic technology platforms by maintaining deployment workflows, Linux servers, database jobs, and monitoring processes for customer-facing government applications.
 - ❖ Improved release automation with **Jenkins 1.x–2.x**, Bash scripting, and structured deployment checklists, reducing manual release mistakes by **17%**.
 - ❖ Helped move several services from manually configured servers toward repeatable infrastructure patterns using Ansible playbooks and documented environment standards.
 - ❖ Resolved application downtime caused by expired SSL certificates, failed service restarts, disk space exhaustion, and incorrect configuration values in production environments.
 - ❖ Implemented basic **Docker** workflows for development and QA environments, helping developers test service changes more consistently before release.
 - ❖ Created monitoring checks for CPU, memory, disk, HTTP status codes, and background job failures, improving visibility into early production warning signs.
 - ❖ Worked with developers to troubleshoot API errors, SQL deadlocks, failed migrations, and dependency conflicts during release windows and urgent hotfixes.
 - ❖ Improved deployment documentation, rollback procedures, and incident notes so support and engineering teams could respond faster during customer-impacting issues.
-

Junior Software Developer

Vology

Jun 2013 – Apr 2014

Gainesville, FL

- ❖ Supported internal infrastructure and application delivery by maintaining Linux servers, deployment scripts, source control workflows, and basic monitoring for business applications.
- ❖ Assisted with **Jenkins** build jobs, shell scripts, database backup checks, and release packaging, reducing repetitive manual deployment work by **14%**.
- ❖ Troubleshoot server issues involving failed services, permission errors, network connectivity, disk usage, and application log errors under senior engineer guidance.
- ❖ Helped standardize Git branching, release notes, and environment configuration files so small engineering teams could deploy changes with fewer mistakes.
- ❖ Documented common operational procedures for deployments, backups, access requests, and incident checks to improve onboarding and reduce dependency on senior staff.

EDUCATION

Arkansas State University

Bachelor's degree, Computer Science (Sep 2009 – May 2013)
