+1 (407) 801-1287 | markhaney.dev@outlook.com

PROFESSIONAL SUMMARY

Staff Software Engineer with 12+ years of experience in SaaS, property technology, nonprofit CRM, civic engagement, and managed services industries, specializing in **Java 8–17**, **Spring Boot 2.0–3.2**, **React 16–18**, **TypeScript 3.8–5.3**, microservices, REST APIs, PostgreSQL, MongoDB, Kafka, AWS, Docker, Kubernetes, CI/CD, and system design; strong background modernizing legacy Java applications, building secure customer-facing platforms, improving API performance, reducing production defects, and leading full-stack delivery from architecture and implementation through release, observability, mentoring, stakeholder collaboration, and long-term maintainability.

TECH SKILLS

- ❖ **Languages:** Java 8–17, TypeScript 3.8–5.3, JavaScript ES6+, SQL, Bash
- ❖ **Backend:** Spring Boot 2.0–3.2, Spring MVC, Spring Security, Spring Data JPA, Hibernate 5–6, REST APIs, GraphQL, Microservices
- ❖ **Frontend:** React 16–18, Redux Toolkit, React Query, Next.js 12–14, HTML5, CSS3, Material UI, Tailwind CSS
- ❖ **Databases:** PostgreSQL 11–15, MongoDB 4–6, MySQL 5.7–8, Redis 5–7, Elasticsearch 7–8
- ❖ **Cloud & DevOps:** AWS EC2, S3, RDS, Lambda, ECS, CloudWatch, Docker 19–24, Kubernetes 1.21–1.28, Terraform 1.x
- ❖ **Testing:** JUnit 4–5, Mockito, Testcontainers, Cypress, Jest, React Testing Library, Postman
- ❖ **Architecture:** Microservices, Event-Driven Architecture, Kafka 2–3, CI/CD, Domain-Driven Design, System Design, OAuth2, JWT

PROFESSIONAL EXPERIENCE

Staff Software Engineer

Relatio

Jun 2022 – Apr 2026

Las Vegas, NV

- ❖ Led the design of a **Python 3.10–3.12 AI/ML platform** for a SaaS data workflow product, connecting FastAPI services, ML inference APIs, feature pipelines, and cloud-native deployment patterns.
- ❖ Built production-ready **FastAPI 0.95–0.111** services around PyTorch and scikit-learn models, improving model response consistency and reducing average inference latency by **32%**.
- ❖ Designed reusable feature extraction pipelines with **Pandas 1.5–2.2**, NumPy, and Airflow, reducing duplicate preprocessing logic across teams by **26%**.
- ❖ Implemented a **RAG-based knowledge search feature** using embeddings, vector search, and prompt evaluation workflows to help internal users retrieve context from complex product data.
- ❖ Resolved a recurring production issue where model APIs returned inconsistent predictions because training and inference used different normalization logic, then centralized the feature contract.
- ❖ Migrated legacy synchronous Python services into async **FastAPI** endpoints with background workers, improving request throughput by **29%** under high-volume data processing workloads.

- ❖ Improved model observability by adding structured logs, latency metrics, drift checks, and failure dashboards across Kubernetes workloads and CI/CD release pipelines.
- ❖ Created a model validation layer that blocked low-quality deployments when accuracy, precision, recall, or input schema checks failed during automated release testing.
- ❖ Reworked Docker images and dependency management for **Python 3.11**, reducing container size and improving cold-start behavior by **21%** in staging and production.
- ❖ Introduced reusable **MLflow 2.x** experiment tracking and model registry patterns so engineers could compare model versions without relying on manual spreadsheets.
- ❖ Mentored backend and data engineers on Python testing, model API design, CI/CD quality gates, and safe rollout strategies for AI-powered product features.
- ❖ Partnered with product and data stakeholders to convert unclear business requirements into measurable ML tasks, clear acceptance criteria, and reliable production delivery.

Senior Software Engineer

AppFolio

Feb 2018 – May 2022

Goleta, CA

- ❖ Developed property management features using **Java 11**, **Spring Boot 2.6**, **React 17**, and PostgreSQL, supporting leasing, billing, tenant communication, and operational reporting workflows.
- ❖ Refactored older Java service layers into cleaner domain-focused components, reducing duplicate business logic and improving release maintainability by **14%**.
- ❖ Built responsive **React 17** screens for property managers to review tenant requests, payment status, and document workflows with better loading states and error handling.
- ❖ Improved slow tenant search APIs by **17%** through SQL query tuning, pagination changes, selective indexing, and caching high-read reference data.
- ❖ Migrated several legacy MVC pages into React-based modules while preserving existing backend contracts, allowing gradual modernization without a risky full rewrite.
- ❖ Resolved a recurring payment reconciliation defect caused by inconsistent rounding between Java BigDecimal logic and frontend display formatting.
- ❖ Implemented secure document upload workflows using AWS S3, signed URLs, Spring validation, and audit logging for sensitive lease-related files.
- ❖ Strengthened automated testing with **JUnit 5**, Mockito, Cypress, and React Testing Library to catch regressions in payment and leasing workflows.
- ❖ Collaborated with DevOps engineers to improve Dockerized local environments, reducing onboarding friction and making backend/frontend setup more predictable.
- ❖ Reviewed pull requests for API design, database migrations, transaction boundaries, and React component structure to keep delivery quality consistent.

Software Engineer

Blackbaud

Jul 2016 – Jan 2018

Charleston, SC

- ❖ Built nonprofit CRM and fundraising features with **Java 8**, **Spring MVC**, **Hibernate 5**, **React 16**, and SQL Server for donor management and campaign operations.
- ❖ Modernized selected legacy JSP and jQuery screens into **React 16** components, improving usability for fundraising teams and reducing UI maintenance effort by **12%**.

- ❖ Developed REST APIs for donor profiles, gift history, campaign segmentation, and reporting workflows with clear validation and structured error responses.
- ❖ Reduced duplicate donor record creation by **9%** by improving matching rules, adding backend validation, and surfacing clearer warnings in the React interface.
- ❖ Solved intermittent transaction rollback issues by fixing Hibernate session handling, reviewing service boundaries, and adding targeted integration tests.
- ❖ Implemented role-based access checks in Spring Security to protect donor records, financial information, and administrative campaign configuration pages.
- ❖ Improved reporting performance by optimizing SQL joins, adding indexes, and separating expensive export jobs from synchronous user-facing requests.
- ❖ Worked with QA to reproduce production defects using real workflow scenarios, then added regression tests to prevent repeated donor and campaign bugs.
- ❖ Participated in Agile delivery ceremonies, estimation, sprint planning, and production support while balancing feature work with technical debt cleanup.

Software Developer

Granicus

May 2014 – Jun 2016

Dallas, TX

- ❖ Delivered civic engagement and government communication features using **Java 7–8**, Spring Framework 4, React 15–16, PostgreSQL, and REST APIs.
- ❖ Implemented public meeting, notification, and subscription workflows that helped government users publish citizen-facing content with fewer manual steps.
- ❖ Improved notification delivery reliability by **10%** by adding retry handling, clearer failure logging, and better validation around email subscription events.
- ❖ Built early **React** interfaces for administrative dashboards while maintaining existing server-rendered Java pages during phased frontend modernization.
- ❖ Resolved timezone-related scheduling bugs by standardizing date handling between Java services, PostgreSQL queries, and frontend display components.
- ❖ Created REST endpoints for agenda management and public record workflows, applying input validation and consistent response models across services.
- ❖ Reduced manual QA effort by **8%** through better unit coverage around scheduling, subscription, and content publishing business rules.
- ❖ Collaborated with senior engineers on release troubleshooting, database migrations, and production log analysis for customer-impacting platform issues.

Junior Software Developer

Vology

Jun 2013 – Apr 2014

Gainesville, FL

- ❖ Supported managed service applications using **Java 7**, Spring Framework, JavaScript, HTML, CSS, MySQL, and internal ticketing integrations.
- ❖ Built small backend enhancements for asset tracking, customer support workflows, and internal reporting tools under senior engineer guidance.
- ❖ Fixed frontend validation bugs and backend null-handling issues that caused failed form submissions in operational support screens.

- ❖ Improved report generation stability by **7%** after identifying inefficient SQL filters and simplifying Java service logic around export requests.
- ❖ Learned professional engineering practices through code reviews, unit testing, production support, Agile ceremonies, and hands-on debugging of customer issues.

EDUCATION

Arkansas State University

Bachelor's degree, Computer Science (Sep 2009 – May 2013)
