+1 (407) 801-1287 | markhaney.dev@outlook.com

PROFESSIONAL SUMMARY

Staff PHP Full-Stack Engineer with 12+ years building SaaS, property-management, nonprofit CRM, gov-tech, and managed IT service platforms, specializing in **PHP 8.1–8.3**, **Laravel 9–11**, **Symfony 5.4–6.4**, **React 18**, **Vue 3**, **MySQL 8**, **PostgreSQL 13–15**, **Redis 6–7**, Docker, AWS, and CI/CD, with strong ownership of API architecture, payment workflows, tenant data models, legacy migration, performance tuning, observability, automated testing, and secure release practices that reduced defects, improved delivery speed, strengthened audit readiness, supported engineering teams, and made large business systems easier to scale, operate, and maintain.

TECH SKILLS

- ❖ **Backend:** **PHP 8.1–8.3**, **Laravel 9–11**, **Symfony 5.4–6.4**, REST API, Microservices, Domain-Driven Design, Event-Driven Architecture
- ❖ **Frontend:** **React 18**, **Vue 3**, TypeScript 4–5, JavaScript ES6+, Bootstrap 5, Tailwind CSS
- ❖ **Database:** **MySQL 8**, **PostgreSQL 13–15**, Redis 6–7, Query Optimization, Indexing, Data Migration
- ❖ **Cloud / DevOps:** AWS, Docker, Kubernetes, GitHub Actions, GitLab CI, Nginx, Linux, CI/CD, Blue-Green Deployment
- ❖ **Testing / Quality:** PHPUnit 9–10, Pest 2, PHPStan, Laravel Pint, API Contract Testing, Integration Testing
- ❖ **Architecture:** Multi-Tenant SaaS, Secure Payment Flow, Queue Processing, API Versioning, Observability, Legacy Modernization

PROFESSIONAL EXPERIENCE

Staff Software Engineer

Relatio

Jun 2022 – Apr 2026

Las Vegas, NV

- ❖ Led **PHP 8.1–8.3** and **Laravel 9–11** backend architecture for a B2B SaaS relationship intelligence platform, separating billing, search, and notification domains into maintainable service modules.
- ❖ Designed multi-tenant APIs with **Symfony 6.4 components**, policy-based authorization, and PostgreSQL row-level patterns, reducing tenant data leakage risk and improving audit readiness by **22%**.
- ❖ Migrated legacy Laravel 8 services to **Laravel 10/11** through staged dependency upgrades, feature flags, Rector refactors, and parallel test runs without blocking active customer releases.
- ❖ Resolved recurring queue timeout issues by profiling **Redis 7** workers, tuning batch sizes, and adding failed-job replay tooling, which reduced delayed background jobs by **31%**.
- ❖ Implemented event-driven customer activity tracking with **PHP 8 attributes**, domain events, and OpenTelemetry traces so product teams could diagnose workflow failures without database digging.
- ❖ Built secure payment and subscription workflows using Stripe webhooks, idempotency keys, signed payload verification, and retry-safe processing to prevent duplicate invoices and missed renewals.

- ❖ Improved API response time by **27%** by replacing N+1 Eloquent queries, adding Redis cache layers, and moving heavy aggregation logic into optimized PostgreSQL materialized views.
- ❖ Created reusable React 18 admin tools connected to Laravel APIs, helping support teams review account health, webhook failures, and entitlement mismatches without engineering intervention.
- ❖ Introduced PHPUnit 10, Pest 2, contract tests, and GitHub Actions quality gates, increasing service-level test coverage while keeping pull request feedback fast and actionable.
- ❖ Standardized Docker Compose development environments with PHP-FPM, Nginx, PostgreSQL, Redis, Mailpit, and queue workers so new engineers could run the platform locally with fewer setup issues.
- ❖ Partnered with product, support, and security stakeholders to define realistic migration milestones, prioritize production bugs, and ship high-risk account management features safely.
- ❖ Mentored engineers on **DDD**, clean Laravel service boundaries, API versioning, and incident review habits, improving code review quality and reducing repeated production defects by **18%**.

Senior Software Engineer

AppFolio

Feb 2018 – May 2022

Goleta, CA

- ❖ Developed property-management SaaS features using **PHP 7.2–8.0**, **Laravel 6–8**, React 16/17, MySQL 5.7/8, and Redis for leasing, accounting, and resident workflows.
- ❖ Modernized older PHP modules by replacing procedural billing logic with Laravel service classes, queueable jobs, and integration tests while preserving existing customer data behavior.
- ❖ Built resident payment APIs with validation, ledger reconciliation, webhook retries, and detailed failure logging, reducing payment support escalations by **21%** across high-volume workflows.
- ❖ Fixed intermittent lease document generation errors by tracing memory spikes, optimizing PDF rendering batches, and introducing retry-safe storage handoffs through AWS S3.
- ❖ Improved application search and filtering by adding indexed MySQL query paths, Redis-backed lookup caches, and pagination controls, cutting slow dashboard loads by **24%**.
- ❖ Migrated selected services from PHP 7.2 to **PHP 7.4/8.0** by resolving deprecated syntax, updating Composer packages, and validating behavior with regression suites.
- ❖ Implemented role-based permission improvements for property managers, maintenance teams, and residents, closing authorization gaps found during internal security reviews.
- ❖ Collaborated with QA and product managers to reproduce edge-case rent calculation bugs, write fixtures around lease terms, and prevent regressions during monthly release cycles.
- ❖ Added CI checks for PHPUnit, PHPStan, ESLint, Docker image builds, and database migration validation to catch release issues before staging deployments.
- ❖ Supported production incidents involving failed jobs, slow queries, and third-party payment outages by improving runbooks, alert context, and rollback confidence.

Software Engineer

Blackbaud

Jul 2016 – Jan 2018

Charleston, SC

- ❖ Built nonprofit CRM and fundraising portal features with **PHP 7.0–7.2**, **Symfony 3.4**, Laravel 5.4/5.5, MySQL, jQuery, and Bootstrap for donor-facing workflows.
- ❖ Implemented donation form APIs with tokenized payment handling, campaign attribution, validation rules, and audit logs to support secure high-volume fundraising events.

- ❖ Reduced duplicate donor records by **19%** by improving matching logic, normalizing email and address fields, and adding review queues for uncertain merge candidates.
- ❖ Migrated legacy PHP 5.6 fundraising components to **PHP 7.1** using compatibility fixes, Composer dependency updates, and regression testing around donation calculations.
- ❖ Solved recurring import failures by adding CSV schema validation, row-level error reporting, and resumable processing for large constituent and campaign files.
- ❖ Improved nonprofit reporting performance by **23%** through query indexing, cached summary tables, and tighter filtering around campaign, gift, and donor dimensions.
- ❖ Created admin interfaces for donor correction, campaign configuration, and receipt resend workflows so support teams could resolve customer issues faster.
- ❖ Worked closely with compliance and product teams to refine access controls, masking behavior, and audit trails around donor payment and personal information.
- ❖ Added PHPUnit coverage and deployment smoke tests for sensitive donation flows, making release verification more predictable before seasonal fundraising peaks.

Software Developer

Granicus

May 2014 – Jun 2016

Dallas, TX

- ❖ Delivered civic engagement and public-meeting platform updates using **PHP 5.5–5.6**, Laravel 4.2/5.1, CodeIgniter 3, MySQL 5.6, jQuery, and Bootstrap.
- ❖ Built agenda publishing and notification features for local government customers, including approval workflows, email templates, document uploads, and public-facing search.
- ❖ Reduced meeting document upload errors by **17%** by validating file metadata, improving storage paths, and adding clearer recovery messages for clerk users.
- ❖ Migrated selected CodeIgniter modules into Laravel 5.1 controllers and services, keeping routes backward compatible while improving testability and maintainability.
- ❖ Optimized public agenda search by adding MySQL indexes, normalized tags, and cache invalidation rules, improving search response times by **20%** during peak access.
- ❖ Resolved timezone and daylight-saving bugs in meeting schedules by centralizing date handling, adding regression tests, and correcting display logic across public pages.
- ❖ Implemented internal moderation tools that helped customer success teams review published content, correct metadata, and resolve citizen-facing display issues quickly.
- ❖ Participated in release planning, code reviews, and production support, gradually improving deployment discipline for PHP applications running across shared hosting environments.

Junior Software Developer

Vology

Jun 2013 – Apr 2014

Gainesville, FL

- ❖ Developed managed IT service and inventory tools with **PHP 5.4**, CodeIgniter 2, CakePHP 2, MySQL 5.5, jQuery, and Bootstrap for sales and operations teams.
- ❖ Built quote, asset lookup, and ticket visibility screens that connected CRM data with inventory records, helping internal users reduce manual follow-up work by **16%**.
- ❖ Fixed legacy form validation and session bugs by reviewing PHP error logs, tightening server-side checks, and standardizing reusable helpers across older modules.

- ❖ Improved report generation speed by **18%** by rewriting slow MySQL joins, adding indexes, and moving repeated calculations out of view-layer PHP code.
- ❖ Supported senior developers with bug fixes, SQL scripts, release testing, and documentation while learning practical MVC patterns, source control, and production troubleshooting.

EDUCATION

Arkansas State University

Bachelor's degree, Computer Science (Sep 2009 – May 2013)
