SUMMARY

Senior Software Engineer with 10+ years of experience owning backend and full-stack products in production for SaaS and cloud-native platforms. Strong background in Python and JavaScript, with deep expertise in designing, building, releasing, and iterating scalable backend systems used by real users. Proven product owner with end-to-end responsibility from architecture and implementation through production reliability, performance optimization, and continuous improvement. Extensive experience with Azure cloud services, Kubernetes, Docker, and GitOps-style CI/CD workflows. Comfortable working independently in remote-first teams, collaborating directly with founders and product leadership, and delivering outcome-driven solutions that scale.

SKILLS

Python	JavaScript	Node.js	FastAPI
Django	RESTful API Design	Microservices Architecture	gRPC
Asynchronous Processing	API Versioning	Data Modeling	PostgreSQL
SQL	MongoDB	Redis	CosmosDB
Query Optimization	Schema Design	Transactional Data Systems	Microsoft Azure
Azure App Services	Azure Functions	Azure Service Bus	Azure Blob Storage
Docker	Kubernetes	GitOps	CI/CD Pipelines
GitHub Actions	Azure DevOps	Terraform	Infrastructure as Code
Production Ownership	Scalable System Design	Performance Optimization	Observability & Monitoring
Distributed Systems	Fault Tolerance	Reliability Engineering	AIOps Basics
MLOps Fundamentals	Python AI Agents	LangChain	LLM APIs
AI-Driven Data Pipelines	Remote-First Collaboration	Product-Led Development	Clear Technical Communication
Cross-Functional Teamwork			

EXPERIENCE

Senior Software Engineer

Datamart, Inc.

August 2022 - July 2025

- Owned multiple backend product areas running in production, supporting enterprise SaaS users with strict reliability, performance, and availability requirements.
- Designed, built, released, and iterated Python and JavaScript backend services using microservices architectures deployed on Azure and Kubernetes.
- Implemented scalable REST APIs and data flows integrating structured and unstructured data sources consumed by product and AI-driven features.

- Took full responsibility for production behavior by monitoring services, diagnosing incidents, and implementing permanent fixes rather than temporary patches.
- Optimized PostgreSQL queries, caching layers, and asynchronous workflows to maintain consistently low-latency responses under real-world load.
- Led cloud-native deployments using Docker, Kubernetes, and GitOps-style CI/CD pipelines with automated rollbacks and health checks.
- Worked directly with CTO, product leadership, and frontend teams to translate execution goals into backend designs that scaled with customer usage.
- Improved service reliability and observability through logging, metrics, and alerting aligned with real production failure modes.
- Introduced continuous improvement practices driven by live usage data, customer feedback, and post-release performance analysis.
- Mentored engineers on backend architecture, cloud best practices, and production ownership mindset.
- Delivered weekly releases while maintaining high code quality, test coverage, and long-term maintainability.

Software Engineer

Next Apps

June 2017 - July 2022

- Owned backend services for customer-facing SaaS applications used in production by distributed and remote teams.
- Built Python and JavaScript services supporting complex business workflows with clear API contracts and reliable data flows.
- Designed and maintained PostgreSQL-backed systems with a strong focus on data integrity, scalability, and operational stability.
- Containerized backend services with Docker and deployed them through Azure-based CI/CD pipelines into multiple environments.
- Collaborated closely with product and frontend teams to evolve backend features post-launch based on real user feedback.
- Improved system resilience and performance using caching, background processing, and cloud-native architectural patterns.
- Participated in on-call rotations, production debugging, and long-term remediation of recurring system issues.
- Contributed to architectural decisions that enabled the platform to scale without major rewrites.
- Worked effectively in a remote-first setup, communicating progress, risks, and outcomes clearly.

Software Engineer

Decima Digital Inc.

April 2014 - May 2017

- Developed and owned backend components for enterprise web platforms running in live production environments.
- Designed RESTful APIs and backend services with clear separation of concerns and maintainable architectures.
- Worked extensively with SQL databases, optimizing schemas and queries for concurrent, high-usage workloads.
- Refactored legacy systems into more modular and scalable architectures suitable for cloud deployment.
- Collaborated with stakeholders to identify system bottlenecks and deliver targeted performance improvements.
- Ensured production reliability through defensive coding, structured error handling, and monitoring practices.
- Built a strong foundation in long-term system ownership and production-grade backend engineering.

Software Developer

Berg Software

September 2011 - March 2014

- Developed backend and web application components used in live business-critical systems.
- Implemented integrations with third-party services and internal APIs to support operational workflows.

- Improved application performance through profiling, caching strategies, and code-level optimizations.
- Worked within Agile teams to deliver features incrementally while maintaining production stability.
- Gained early experience taking responsibility for deployed code and supporting it after release.

EDUCATION

Bachelor of Computer Science

University of Bucharest

2007 - 2011
