SUMMARY

Senior AI Engineer with 10+ years of experience designing and shipping **production-scale AI/ML systems**, including **LLMs, RAG architectures, agentic workflows, NLP, computer vision, and high-performance inference pipelines**. Expert in building end-to-end AI solutions across the entire lifecycle—**data engineering, model development, evaluation, deployment, and MLOps automation**.

Highly skilled in **Python, PyTorch, TensorFlow, LangChain, vector databases, AWS, GCP, Kubernetes**, and distributed systems (Kafka). Known for delivering **robust, scalable, explainable, and cost-efficient AI products** that solve real business problems. Strong collaborator experienced in partnering with cross-functional teams, leading technical designs, and driving innovation in GenAI and enterprise AI platforms.

SKILLS

AI & Machine Learning

- LLMs (OpenAI, Claude, Llama), fine-tuning, prompt engineering, RAG
- NLP: classification, entity extraction, summarization, semantic search
- Deep Learning (PyTorch, TensorFlow, Keras)
- Computer Vision (YOLO, CNNs, OCR, segmentation)
- AI agents, task automation, workflow orchestration

MLOps & Cloud Engineering

- Kubernetes, Docker, Helm, Argo, MLflow
- Vector DBs: Pinecone, FAISS, Chroma, Milvus

- Model serving: FastAPI, gRPC, TensorRT, TorchServe
- CI/CD: GitHub Actions, GitLab CI, Jenkins
- Observability: Prometheus, Grafana, CloudWatch

Cloud Platforms & Infrastructure

- **AWS & GCP** (core skills listed in resume)
- Kafka, event-driven pipelines
- Terraform, CloudFormation
- Scalable microservices & distributed systems

Software Engineering

- Python (expert), Go, Node.js
- API design, asynchronous services
- High-performance backend development

PROFESSIONAL EXPERIENCE

Senior Software Engineer

SumatoSoft

Boston, MA | Feb 2020 – Oct 2025 (Remote)

- ❖ Led architecture and delivery of enterprise LLM platforms powering search, analytics, and automation features.
- ❖ Built scalable inference services on AWS/GCP using Kubernetes, microservices, and vector databases.
- ❖ Designed end-to-end ML pipelines for data prep, training, fine-tuning, evaluation, and production deployment.

- ❖ Integrated LLMs and agentic workflows into apps to automate document processing, retrieval, and decisions.
- ❖ Improved model performance through quantization, distillation, batching, and GPU optimization techniques.
- ❖ Implemented RAG pipelines with embeddings, semantic search, and efficient retrieval over large datasets.
- ❖ Collaborated with product, backend, and data teams to translate requirements into reliable AI solutions.

AI Software Engineer

Saritasa

Orange County, CA | Jun 2016 – Jan 2020 (Remote)

- ❖ Developed ML and DL models for web and mobile apps, covering predictive analytics, recommendations, and NLP tasks.
- ❖ Built production-ready REST APIs for AI model serving using Python, Flask, and FastAPI.
- ❖ Implemented computer vision pipelines for image classification, object detection, and OCR workflows.
- ❖ Designed scalable model deployment systems using Docker, Kubernetes, and cloud-native patterns.
- ❖ Optimized model performance using quantization, batching, caching, and GPU acceleration techniques.
- ❖ Integrated AI modules into customer platforms by working closely with backend, product, and mobile teams.
- ❖ Created automated training, testing, and CI/CD workflows to streamline ML model lifecycle management.
- ❖ Delivered monitoring and logging for AI services, tracking accuracy, latency, and production model drift.

Artificial Intelligence Developer

NIX United

Tampa, FL | Jan 2011 – May 2016 (Remote)

- ❖ Designed and implemented core ML algorithms and prototype models for internal and client applications.
- ❖ Built data pipelines and ETL workflows to clean, transform, and prepare datasets for training.
- ❖ Developed model-serving services and REST APIs using Python and lightweight frameworks.
- ❖ Contributed to NLP tasks such as text classification, document similarity, and sentiment analysis.
- ❖ Delivered predictive analytics features for finance, healthcare, and logistics use cases.
- ❖ Improved model accuracy through feature engineering, hyperparameter tuning, and evaluation cycles.
- ❖ Automated preprocessing steps to streamline training workflows and reduce manual effort.
- ❖ Deployed ML models on on-prem or early cloud setups using Docker and standard CI processes.
- ❖ Collaborated with software, QA, and product teams to integrate ML components into customer platforms.

Software Developer Intern

Exquisite Software

Scottsdale, AZ | Oct 2010 – Dec 2010 (On-Site)

- ❖ Assisted in developing small backend features using Python and JavaScript under guidance from senior engineers.
- ❖ Helped write data processing scripts for importing, cleaning, and validating datasets.
- ❖ Supported debugging and testing activities to ensure application stability.
- ❖ Created simple automation scripts to reduce manual tasks for the engineering team.

- ❖ Collaborated with developers to understand project workflows, coding standards, and version control practices.

EDUCATION

Bachelor's Degree of Science in Computer Science

California State University – Dominguez Hills

2006 – 2010
