SUMMARY

Senior Software Engineer with 9+ years of experience designing, building, and operating production-grade software systems in SaaS and data-driven environments. Strong background in backend service development, API design, and database-driven applications supporting analytics and high-volume data workflows. Experienced with Python-based backend systems, relational databases, and integration between transactional systems and analytical platforms. Proven ability to own backend services end-to-end, from system design and implementation through deployment and monitoring. Adept at collaborating across frontend, data, and product teams to deliver reliable, scalable solutions with measurable business impact.

SKILLS

Python	JavaScript	TypeScript	REST APIs
API Design	Asynchronous Processing	Data Ingestion Pipelines	PostgreSQL
SQL Optimization	Schema Design	ETL Pipelines	Analytical Data Warehouses
Event-Based Data Processing	AWS	Linux	CI/CD
Git	Docker	Production Monitoring	Performance Optimization
Testing Best Practices	Incident Response		

EXPERIENCE

Senior Software Engineer

SumatoSoft

April 2022 - December 2025

- Designed and maintained backend services using Python to support data-intensive SaaS applications used by enterprise clients.
- Built and evolved REST APIs enabling reliable ingestion, transformation, and retrieval of event and analytics data at scale.
- Designed PostgreSQL schemas and optimized complex queries to improve performance and support growing data volumes.
- Integrated backend services with analytical data stores and reporting pipelines to support business intelligence use cases.
- Implemented background processing and asynchronous workflows to handle high-throughput data ingestion reliably.
- Ensured production readiness through logging, monitoring, alerting, and comprehensive automated testing.
- Collaborated closely with frontend engineers to deliver end-to-end features backed by robust backend APIs.
- Worked with product managers to translate analytics and reporting requirements into scalable technical designs.
- Participated in incident response, root cause analysis, and postmortems to continuously improve system reliability.
- Contributed to backend architecture decisions with a focus on scalability, maintainability, and performance.

Software Engineer

Hexaview Technologies Inc.

July 2018 - March 2022

- Developed and maintained backend components for enterprise SaaS platforms supporting analytics-driven workflows.
- Implemented Python-based services and APIs to move and transform data between transactional systems and reporting layers.
- Designed relational database schemas and optimized SQL queries to improve performance and data consistency.
- Collaborated with data teams to support ETL processes and ensure accurate analytics data delivery.
- Worked in Linux-based environments to deploy, troubleshoot, and tune backend services in production.
- Integrated backend services with frontend applications to support secure authentication and data access patterns.
- Participated in code reviews and contributed to improving backend coding standards and documentation.
- Supported CI/CD pipelines and automated testing to ensure reliable and repeatable deployments.
- Collaborated across distributed teams to deliver backend features aligned with business and product goals.

Software Developer

SimbirSoft Company

March 2015 - June 2018

- Built backend application logic and APIs supporting data-centric business applications.
- Worked with relational databases to design schemas and write efficient SQL queries.
- Collaborated with senior engineers to implement data processing and integration workflows.
- Supported backend services running on Linux environments, assisting with troubleshooting and maintenance.
- Contributed to application performance tuning and reliability improvements.
- Partnered with frontend developers to ensure consistent and reliable data exchange.
- Developed clean, maintainable code following established engineering standards.

Software Developer Intern

Microsoft

August 2014 - February 2015

- Contributed to backend and full-stack development on internal web applications.
- Assisted in implementing server-side features and integrating backend services with user interfaces.
- Worked with databases and APIs to support data-driven application functionality.
- Learned and applied software engineering best practices including version control and testing.
- Collaborated within an agile team environment while gaining exposure to large-scale production systems.

EDUCATION

Bachelor of Computer Science

The University of North Carolina at Chapel Hill

2010 - 2014
