SUMMARY

Senior Software Engineer with 9+ years of experience designing, building, and owning production-grade software systems with a strong focus on cloud-native architectures and AI-enabled products. Extensive hands-on experience across frontend and backend development, including React and TypeScript on the frontend and Node.js, Java Spring Boot, and Python on the backend. Proven ability to integrate large language models into real-world applications through agentic workflows, prompt engineering, and retrieval-augmented generation pipelines. Experienced in building scalable microservices, APIs, and data-driven systems while maintaining high standards for reliability, observability, and security. Adept at collaborating with cross-functional teams to translate complex requirements into measurable, user-facing outcomes in fast-paced environments.

SKILLS

JavaScript	TypeScript	Python	Java
React	REST API Integration	GraphQL	Node.js
Spring Boot	REST APIs	Microservices Architecture	PostgreSQL
MySQL	MongoDB	Elasticsearch	AWS
Azure	GCP	CI/CD	Docker
Automated Testing	Large Language Models (LLMs)	Agentic AI	Prompt Engineering
LangChain	RAG Pipelines	Vector Databases	AI Evaluation & Guardrails

EXPERIENCE

Senior Software Engineer

SumatoSoft

April 2022 - December 2025

- Designed and delivered end-to-end software solutions spanning React and TypeScript frontends, Node.js and Java Spring Boot backend services, and Python-based AI components in production environments.
- Built and integrated AI-driven features using large language models, including prompt engineering, reusable prompt templates, and agent-based workflows to support conversational interfaces and internal automation.
- Implemented retrieval-augmented generation pipelines using vector search and relational databases to enhance accuracy, reduce hallucinations, and improve system reliability.
- Architected scalable microservices with strong observability, monitoring, and automated testing to ensure performance and reliability across distributed systems.
- Collaborated closely with product managers, designers, and data engineers to translate ambiguous business requirements into measurable, user-facing features.
- Mentored junior engineers and led code reviews while remaining hands-on with development, deployment, and continuous delivery pipelines.

Software Engineer

Hexaview Technologies Inc.

July 2018 - March 2022

- Developed and maintained full-stack web applications using React on the frontend and Node.js and Java-based services on the backend.
 - Built secure REST and GraphQL APIs with role-based authentication and authorization to support enterprise and multi-tenant use cases.
 - Worked extensively with relational and non-relational databases, optimizing schemas and queries for performance and scalability.
 - Contributed to cloud-based deployments and CI/CD pipelines, ensuring reliable releases and automated testing across environments.
 - Partnered with cross-functional stakeholders to iteratively deliver features while balancing technical quality and delivery timelines.
 - Gained early experience integrating data-driven and intelligent features into customer-facing applications.
-

Software Developer

SimbirSoft Company

March 2015 - June 2018

- Built backend services and web applications supporting complex business workflows and customer-facing functionality.
 - Implemented RESTful APIs and application logic using JavaScript-based stacks in production environments.
 - Worked with databases and data-intensive systems, focusing on correctness, performance, and maintainability.
 - Collaborated with senior engineers on early distributed system components, gaining experience in scalability and fault tolerance.
 - Participated in code reviews, testing, and documentation to improve overall code quality and team standards.
 - Contributed to feature development from initial design through deployment and post-release support.
-

Software Developer Intern

Microsoft

August 2014 - February 2015

- Worked as a software development intern contributing to internal tools and platform components.
- Assisted in designing and implementing features using modern programming languages and development frameworks.
- Collaborated with full-time engineers to understand large-scale system design and best practices.
- Participated in code reviews, testing, and debugging to ensure high-quality deliverables.
- Gained hands-on experience working within a structured engineering organization and agile development processes.
- Built a strong foundation in professional software engineering standards and collaboration.

EDUCATION

Bachelor of Computer Science

The University of North Carolina at Chapel Hill

2010 - 2014
