SKILLS

Programming

C#, .NET, Python, JavaScript, TypeScript

Cloud

Microsoft Azure, AWS, GCP, Cloud-Native Architecture, Azure DevOps

AI & Intelligent Automation

Large Language Models (LLMs), Prompt Engineering, RAG Pipelines, AI Model Evaluation, Intelligent Automation

Backend & APIs

REST APIs, Microservices, Distributed Systems, Event-Driven Architecture

DevOps & CI/CD

Azure DevOps Pipelines, CI/CD, Docker, Infrastructure as Code, Observability

EDUCATION

Florida State University

Bachelor of Computer Science
2009 - 2013

Professional Summary

Senior Software Engineer with 9+ years of experience delivering cloud-native, intelligent software solutions across enterprise and SaaS environments. Strong expertise in designing and building scalable backend services, APIs, and automation-enabled systems using C#, .NET, Python, Node.js, and modern cloud platforms. Proven experience integrating Generative AI and LLM capabilities into production workflows, including evaluation, testing, and optimization of model performance. Hands-on background in Azure, AWS, and CI/CD pipelines with a focus on reliability, scalability, and maintainability. Adept at leading technical design discussions, defining coding standards, and driving operational efficiency through reusable architectures and automation. Known for working independently, providing clear technical direction, and collaborating effectively with cross-functional teams and clients.

Professional Skills

Senior Software Engineer

Web Venturez LLC | February 2020 - October 2025

- Led the design and development of cloud-based backend services using C# and .NET, delivering scalable and maintainable solutions for enterprise SaaS products.
- Participated in client-facing technical design sessions, providing guidance on architecture, scalability, availability, and long-term maintainability.
- Integrated Large Language Model capabilities into production workflows, enabling intelligent automation and AI-assisted features.
- Designed and implemented evaluation and testing approaches to measure LLM performance across multiple business use cases.
- Collaborated closely with engineers to embed AI algorithms into existing production systems with minimal disruption.
- Built and maintained CI/CD pipelines using Azure DevOps to support reliable and repeatable deployments.
- Defined and promoted coding standards, testing practices, and development policies across teams.
- Improved system performance and operational efficiency through reusable components and shared service patterns.
- Worked independently with minimal oversight while owning complex integrations end-to-end.
- Provided technical mentorship and architectural guidance to peers across distributed teams.
- Partnered with product and stakeholders to translate

ambiguous requirements into robust technical solutions.

Full Stack Engineer

Webiz Digital | July 2017 - January 2020

- Developed full-stack applications using .NET backend services and modern JavaScript-based frontends.
- Designed RESTful APIs and backend logic supporting data-intensive and automation-driven workflows.
- Contributed to early cloud adoption efforts using Azure and AWS services.
- Collaborated with cross-functional teams to deliver features aligned with performance and scalability goals.
- Implemented CI/CD practices to improve deployment reliability and reduce release cycles.
- Supported integration of automation and data processing components within existing systems.
- Applied clean code principles and reusable patterns to improve long-term maintainability.
- Participated in design reviews and provided technical input on system improvements.
- Demonstrated strong ownership and accountability across the full development lifecycle.

Software Developer

Centric Tech Inc. | October 2013 - June 2017

- Built and maintained backend services and internal business applications using C# and .NET technologies.
 - Implemented APIs and core application logic supporting operational and reporting systems.
 - Collaborated with senior engineers to understand system architecture and best practices.
 - Assisted with debugging, performance tuning, and production issue resolution.
 - Supported early automation and data processing initiatives within the organization.
 - Worked closely with stakeholders to deliver features aligned with business requirements.
 - Established a strong foundation in software engineering, testing, and documentation standards.
-
