LinkedIn: linkedin.com/in/tyler-roberts-a7b0953a0

SKILLS

Programming

Python, TypeScript, JavaScript, Node.js

AI & ML

Generative AI, Large Language Models (LLMs), Agentic AI, Multi-Agent Systems, Prompt Engineering, Retrieval-Augmented Generation (RAG), Vector Databases, Model Evaluation and Evals

Frameworks & Tools

LangGraph, LlamaIndex, OpenAI APIs, Embedding Models, AI Observability Tooling

Backend

REST APIs, Distributed Systems, Microservices, Event-Driven Architecture

Frontend

React, Next.js, HTML, CSS

Cloud & DevOps

AWS, GCP, Serverless Architecture, Docker, CI/CD, Infrastructure as Code, Monitoring and Observability

EDUCATION

Florida State University

Bachelor of Computer Science
2009 - 2013

Professional Summary

Senior Software Engineer with 9+ years of experience designing, building, and operating production-grade, cloud-native systems with a strong focus on Generative AI and agentic architectures. Proven expertise in architecting and shipping LLM-powered applications, including multi-agent systems, RAG pipelines, and AI-driven workflows, using Python and TypeScript in real-world production environments. Extensive background in delivering scalable backend services, modern frontend applications, and robust APIs across AWS and GCP. Adept at owning complex systems end-to-end, from architecture and prototyping to deployment, observability, and continuous improvement. Experienced in collaborating cross-functionally with product, data, and platform teams to translate ambiguous requirements into reliable, high-impact AI-powered user experiences.

Professional Skills

Senior Software Engineer

Web Venturez LLC | February 2020 - October 2025

- Architected, developed, and shipped production-grade cloud-native systems using Python, Node.js, and TypeScript, supporting enterprise SaaS platforms with high availability and scalability requirements.
- Designed and implemented LLM-powered features, including RAG pipelines and agentic workflows, integrating vector databases and prompt engineering techniques into real-world applications.
- Built and maintained distributed backend services and APIs on AWS, leveraging serverless and managed services to ensure performance, reliability, and cost efficiency at scale.
- Owned complex AI and third-party integrations end-to-end, implementing robust error handling, monitoring, and observability to support production multi-agent systems.
- Collaborated closely with product managers, designers, and domain experts to translate evolving requirements into high-quality, user-facing AI-driven experiences.
- Contributed to architectural decisions and engineering best practices, emphasizing clean code, testability, and long-term maintainability across AI-driven systems.

Full Stack Engineer

Webiz Digital | July 2017 - January 2020

- Developed full-stack web applications using React, Node.js, and modern JavaScript frameworks, delivering responsive and

scalable user experiences.

- Designed and implemented RESTful APIs and backend services to support data-intensive workflows and integrations with external systems.

- Collaborated with cross-functional teams to enhance existing codebases while maintaining performance, security, and usability standards.

- Contributed to early cloud-native deployments on AWS, gaining hands-on experience with scalable infrastructure and CI/CD pipelines.

- Supported integration of intelligent features and data-driven logic into applications, laying the groundwork for later AI-focused systems.

- Continuously improved code quality through reviews, refactoring, and adherence to best practices in distributed system design.

Software Developer

Centric Tech Inc. | October 2013 - June 2017

- Built and maintained backend services and web applications supporting internal and client-facing business systems using JavaScript and backend technologies.

- Implemented application logic and APIs that supported early distributed system architectures and data-driven workflows.

- Worked closely with senior engineers to understand system architecture, deployment pipelines, and production support processes.

- Assisted in debugging, performance tuning, and reliability improvements for production environments.

- Collaborated across teams to deliver features aligned with business requirements and timelines.

- Established a strong foundation in software engineering best practices, preparing for senior-level ownership in later roles.
