LinkedIn: linkedin.com/in/tyler-roberts-a7b0953a0

SKILLS

Programming

Python, TypeScript, JavaScript, Node.js

ML & AI

MLOps, Machine Learning Systems, LLMs, RAG Architectures, Prompt Engineering, Vector Databases, ML Monitoring & Observability

ML Frameworks

PyTorch, scikit-learn, XGBoost, TensorFlow, Keras

Backend & APIs

FastAPI, Async Python, REST APIs, Distributed Systems, Microservices

Cloud & Platform

AWS, GCP, Vertex AI, Cloud-Native Architecture

DevOps & MLOps

CI/CD for ML, Docker, Kubeflow, MLflow, Argo Workflows, Infrastructure as Code, Terraform

Python Tooling

mypy, ruff, bandit, pytest, uv

EDUCATION

Florida State University

Bachelor of Computer Science
2009 - 2013

Professional Summary

Senior Software Engineer with 9+ years of experience designing, building, and owning cloud-native, AI-enabled platforms with a strong focus on ML systems and MLOps. Extensive hands-on experience developing Python-based ML pipelines, CI/CD automation, and production-grade AI systems aligned with platform standards and best practices. Proven ability to operate as an embedded engineer within cross-functional product teams, balancing team-specific needs with organizational platform patterns. Deep expertise in building, deploying, monitoring, and maintaining ML and GenAI solutions, including LLM-based systems, RAG architectures, and observability-driven MLOps workflows. Adept at collaborating with product, AI, and platform teams to accelerate AI delivery while maintaining high standards for code quality, scalability, and reliability.

Professional Skills

Senior Software Engineer

Web Venturez LLC | February 2020 - October 2025

- Actively contributed to the design and implementation of ML and AI systems as an embedded engineer within cross-functional product teams.
- Developed and maintained Python-based ML pipelines, enabling consistent model training, validation, and deployment using platform-standard patterns.
- Implemented robust CI/CD pipelines for ML models, ensuring repeatable, automated, and reliable delivery across environments.
- Built and integrated GenAI solutions including LLM-powered services, RAG pipelines, and vector search capabilities into production systems.
- Applied MLOps best practices including model versioning, monitoring, observability, and lifecycle management to ensure long-term system reliability.
- Collaborated closely with platform teams to adopt, validate, and refine shared ML platform capabilities and engineering standards.
- Balanced team-specific AI development needs with organizational platform requirements, ensuring alignment without sacrificing delivery speed.
- Participated in code reviews and technical design discussions with a strong focus on platform patterns, maintainability, and scalability.

- Provided actionable feedback on ML platform usability and capabilities based on real-world implementation experience.
- Documented technical decisions, ML workflows, and platform integrations to support knowledge sharing and long-term maintainability.
- Championed engineering excellence by writing clean, well-tested, and production-grade code aligned with modern Python practices.

Full Stack Engineer

Webiz Digital | July 2017 - January 2020

- Designed and developed backend services and APIs to support data-intensive and ML-adjacent application workflows.
- Built Python and Node.js services that integrated with cloud-based data pipelines and analytics systems.
- Collaborated with product and design teams to translate requirements into scalable technical solutions.
- Implemented automated testing strategies to improve reliability and maintainability of backend services.
- Supported CI/CD pipelines and deployment workflows to ensure smooth and repeatable releases.
- Assisted in troubleshooting production issues across distributed systems and cloud environments.
- Contributed to architectural discussions focused on scalability, performance, and long-term system evolution.
- Worked closely with senior engineers to adopt best practices in system design and cloud-native development.
- Improved code quality through refactoring, code reviews, and adherence to established standards.

Software Developer

Centric Tech Inc. | October 2013 - June 2017

- Developed and maintained backend services and business applications using modern programming practices.
 - Implemented application logic and APIs that supported early distributed system architectures.
 - Collaborated with cross-functional teams to deliver features aligned with business and technical requirements.
 - Assisted with debugging, performance optimization, and production support activities.
 - Gained hands-on experience with system design, deployment workflows, and operational considerations.
 - Contributed to improving system reliability through proactive issue identification and resolution.
 - Built a strong foundation in software engineering principles, clean code, and maintainable system design.
-
