LinkedIn: linkedin.com/in/tyler-roberts-a7b0953a0

SKILLS

Programming

Python, JavaScript, TypeScript, Node.js

AI_and_GenAI

Agentic AI Systems, Applied LLMs, Reasoning and Autonomy Loops, LLM Evaluation and Scoring, Prompt Engineering, RAG Pipelines, Vector Databases, LLM Observability

Backend_and_Systems

Distributed Systems, Microservices Architecture, Event-Driven Systems, REST APIs, Inference Pipelines

Cloud_and_Infrastructure

AWS, GCP, Cloud-Native Architecture, Serverless, CI/CD

DevOps_and_Observability

Structured Logging, Metrics and Monitoring, System Reliability, Performance Optimization

EDUCATION

Florida State University

Bachelor of Computer Science
2009 - 2013

Professional Summary

Senior Software Engineer with 9+ years of experience designing and delivering production-grade, cloud-native systems with a strong focus on Agentic AI, applied LLM systems, and scalable backend architectures. Proven hands-on expertise building agentic workflows including evaluators, critics, feedback loops, and observability layers for reasoning-driven AI systems. Experienced in architecting AI services that supervise, score, and monitor other AI components using structured evaluation, telemetry, and runtime feedback. Strong background in Python, Node.js, distributed systems, and cloud platforms, with practical experience deploying LLM-powered systems under real-world performance, security, and reliability constraints. Operates as a senior individual contributor with full ownership across architecture, implementation, optimization, and deployment.

Professional Skills

Senior Software Engineer

Web Venturez LLC | February 2020 - October 2025

- Designed and implemented production-grade backend services and AI-enabled platforms using Python, Node.js, and cloud-native architectures to support enterprise and high-complexity workloads.
- Built and deployed agentic AI workflows integrating LLMs with evaluators, scoring logic, feedback loops, and observability to ensure reliable reasoning and controlled autonomy in production systems.
- Owned end-to-end architecture and delivery of LLM-powered features including RAG pipelines, vector search, and AI-driven decision support, focusing on correctness, performance, and traceability.
- Optimized runtime behavior and system performance through structured logging, metrics, monitoring, and targeted refactoring of distributed services handling AI inference and orchestration.
- Collaborated closely with product managers and domain stakeholders to translate ambiguous and security-sensitive requirements into robust, testable, and maintainable AI-driven systems.
- Served as a senior technical anchor, making architectural decisions, reviewing complex code paths, and ensuring production readiness across AI, backend, and infrastructure layers.

Full Stack Engineer

Webiz Digital | July 2017 - January 2020

- Developed and maintained full-stack web applications using Node.js, React, and modern JavaScript frameworks for cloud-hosted SaaS platforms.
- Designed and implemented RESTful APIs and backend services that supported complex business logic, integrations, and data-intensive workflows.
- Integrated AI-adjacent features such as search, recommendation logic, and data processing pipelines that later evolved into LLM-enabled capabilities.
- Worked closely with frontend and design teams to deliver responsive, high-performance user interfaces while maintaining backend reliability.
- Contributed to cloud deployments and CI/CD pipelines, gaining hands-on experience with AWS-based infrastructure and production operations.
- Improved system quality through testing, refactoring, and performance tuning, building a strong foundation for scalable and distributed systems.

Software Developer

Centric Tech Inc. | October 2013 - June 2017

- Built and maintained backend services and internal web applications supporting core business operations and client-facing systems.
 - Implemented application logic and APIs using JavaScript and backend technologies, contributing to early distributed system designs.
 - Collaborated with senior engineers to understand system architecture, deployment workflows, and production support processes.
 - Assisted with debugging, performance optimization, and reliability improvements in live production environments.
 - Participated in cross-team collaboration to deliver features aligned with business requirements and timelines.
 - Established a strong foundation in software engineering best practices, system design, and long-term code maintainability.
-
