LinkedIn: linkedin.com/in/tyler-roberts-a7b0953a0

SKILLS

Programming

C#, .NET, .NET Core, ASP.NET, LINQ

Web

ASP.NET MVC, ASP.NET Web API, HTML, CSS, JavaScript

Backend

Entity Framework, WCF, ASMX, RESTful Services, IIS

Database

SQL Server, MSSQL, Database Design, Query Optimization

Architecture

Object-Oriented Programming, Layered Architecture, Enterprise Application Design, SDLC

Practices

Clean Code, Debugging & Troubleshooting, Unit & Integration Testing, Technical Documentation

EDUCATION

Florida State University

Bachelor of Computer Science
2009 - 2013

Professional Summary

Principal-level Software Engineer with 9+ years of experience designing, building, and owning enterprise-grade, web-based applications using the Microsoft .NET ecosystem. Strong expertise in C#, ASP.NET, .NET Core, Entity Framework, LINQ, and SQL Server, with a proven ability to deliver secure, scalable, and high-performance systems in regulated and data-intensive environments. Experienced across the full SDLC, from requirements analysis and architecture to implementation, testing, deployment, and long-term maintenance. Adept at translating complex business requirements into clean, maintainable technical solutions while collaborating closely with cross-functional stakeholders. Passionate about continuous learning, clean code practices, and building reliable platforms that enable digital transformation in financial and enterprise domains.

Professional Skills

Senior Software Engineer

Web Venturez LLC | February 2020 - October 2025

- Designed and developed enterprise-grade, web-based applications using C#, ASP.NET, .NET Core, and Entity Framework to support business-critical workflows.
- Translated complex business and technical requirements into scalable software designs aligned with project goals and long-term maintainability.
- Built and optimized data access layers using LINQ and SQL Server, ensuring high performance and reliable database integrations.
- Debugged, tested, and troubleshooted applications to resolve production issues and ensure stability, security, and correctness.
- Collaborated closely with developers, designers, and project managers to deliver features on time and within scope.
- Maintained and enhanced existing applications by refactoring legacy code and introducing cleaner architectural patterns.
- Applied object-oriented programming principles to ensure extensibility, reusability, and clear separation of concerns.
- Participated actively across the full SDLC, from requirements analysis through deployment and post-release support.
- Documented system designs, code changes, and development processes to support long-term maintenance and knowledge sharing.
- Stayed current with evolving .NET technologies and best

practices to continuously improve development efficiency.

- Provided technical guidance and support to internal teams and stakeholders when integrating or extending platform functionality.

Full Stack Engineer

Webiz Digital | July 2017 - January 2020

- Developed and maintained web applications using ASP.NET, C#, JavaScript, HTML, and CSS for data-driven enterprise solutions.
- Implemented RESTful services and backend components using .NET frameworks to support frontend workflows and integrations.
- Designed database schemas and wrote optimized SQL Server queries to ensure reliable and efficient data access.
- Worked closely with UI designers and backend engineers to deliver cohesive, user-friendly applications.
- Debugged and resolved application issues across the full stack, improving performance and reliability.
- Applied OOP principles and clean code practices to improve code quality and long-term maintainability.
- Supported application deployments and environment configurations on IIS-based infrastructures.
- Participated in requirements discussions and contributed technical input to solution design decisions.
- Maintained clear documentation for application features, APIs, and development workflows.

Software Developer

Centric Tech Inc. | October 2013 - June 2017

- Developed backend services and web applications using C# and the .NET framework to support internal and client-facing systems.
 - Implemented business logic and data access layers using Entity Framework and SQL Server.
 - Assisted in designing and maintaining web-based applications hosted on IIS environments.
 - Debugged and troubleshooted production issues to ensure system stability and data integrity.
 - Collaborated with senior engineers to understand system architecture and development standards.
 - Contributed to testing efforts to validate functionality against business and technical requirements.
 - Documented code changes and system behavior to support ongoing maintenance and enhancements.
-
