LinkedIn: linkedin.com/in/cristoff-stan-a18682384

SKILLS

Programming

C#, TypeScript, JavaScript, Python, Node.js

Frontend

React, HTML, CSS, Modern JavaScript, TypeScript

Backend

ASP.NET Core, Web API, Entity Framework, REST APIs, Background Job Processing

Databases

PostgreSQL, Redis, Database Design, Query Optimization

Cloud & DevOps

Azure, AWS, Docker, Kubernetes, GitHub Actions, CI/CD

Testing

Playwright, Jest, Unit Testing, Integration Testing

Security & Auth

Azure IDP, MSAL Authentication, Secure API Design

EDUCATION

Florida State University

Bachelor of Computer Science
2009 - 2013

Professional Summary

Senior Software Engineer with 9+ years of experience building and owning full-stack, cloud-native applications with a strong focus on backend reliability, frontend usability, and production-grade quality standards. Extensive experience designing and implementing C# and ASP.NET Core Web APIs, building modern React applications with TypeScript, and delivering scalable systems backed by PostgreSQL and Redis. Proven ability to work autonomously, proactively enforcing testing, code quality, and release readiness without external oversight. Strong background in containerized environments using Docker and Kubernetes, with hands-on CI/CD automation via GitHub Actions. Experienced in cloud platforms including Azure and AWS, with practical knowledge of authentication, background processing, and distributed system fundamentals.

Professional Skills

Senior Software Engineer

Web Venturez LLC | February 2020 - October 2025

- Designed, built, and maintained production-grade backend services using C# and ASP.NET Core Web APIs, focusing on clean architecture, scalability, and long-term maintainability.
- Developed modern React applications using TypeScript, ensuring responsive UI behavior, predictable state management, and seamless integration with backend APIs.
- Implemented data access layers using Entity Framework and PostgreSQL, optimizing queries and schemas to support high-throughput and reliable application workflows.
- Introduced thorough testing practices including unit, integration, and end-to-end tests using Jest and Playwright, validating both happy paths and edge cases before every release.
- Containerized applications using Docker and deployed services in Kubernetes environments, collaborating closely with DevOps to ensure reliable builds, deployments, and rollbacks.
- Automated CI/CD pipelines with GitHub Actions, enforcing quality gates, test execution, and repeatable deployment processes across environments.
- Integrated Azure-based authentication using MSAL and Azure IDP, ensuring secure user access and token-based authorization across distributed services.

Full Stack Engineer

Webiz Digital | July 2017 - January 2020

- Built and maintained full-stack web applications using backend

services and modern JavaScript frameworks, delivering features from concept through production release.

- Developed RESTful APIs and business logic layers, ensuring consistent data contracts and reliable integration between frontend and backend systems.

- Worked extensively with relational databases, contributing to schema design, query optimization, and performance tuning for data-heavy workflows.

- Collaborated with designers and product stakeholders to implement user-focused frontend components while maintaining performance and cross-browser compatibility.

- Actively participated in code reviews, refactoring efforts, and testing improvements to raise overall code quality and system reliability.

- Gained hands-on experience with cloud-hosted deployments and early containerization practices, laying the foundation for later Kubernetes-based systems.

Software Developer

Centric Tech Inc. | October 2013 - June 2017

- Developed backend services and web applications supporting internal and client-facing systems using established software engineering best practices.

- Implemented API endpoints, application logic, and data access layers while working closely with senior engineers on system design decisions.

- Assisted in maintaining and improving database-backed applications, addressing performance issues and ensuring data consistency.

- Participated in debugging, testing, and production support activities to ensure system stability and reliable releases.

- Collaborated across engineering and business teams to translate requirements into functional technical solutions delivered on schedule.

- Built a strong foundation in structured development, testing discipline, and ownership that supported progression into senior-level roles.
