LinkedIn: linkedin.com/in/tyler-roberts-a7b0953a0

SKILLS

Programming

Python, JavaScript, TypeScript, Bash

Cloud

AWS, EC2, Lambda, S3, RDS, IAM, CloudWatch, ECS

DevOps

CI/CD Pipelines, GitHub Actions, GitLab CI, Jenkins, Infrastructure as Code, Terraform, CloudFormation, Observability

Containers

Docker, Containerized Applications, ECS, Kubernetes Concepts

Architecture

Cloud-Native Architecture, Distributed Systems, High Availability, Security Best Practices

EDUCATION

Florida State University

Bachelor of Computer Science
2009 - 2013

Professional Summary

Senior Software Engineer with 9+ years of experience supporting and operating cloud-native SaaS platforms with a strong focus on DevOps, automation, and reliability engineering. Extensive hands-on experience building and maintaining CI/CD pipelines, managing AWS infrastructure, and implementing Infrastructure as Code to support scalable, secure, and cost-efficient environments. Proven ability to collaborate closely with engineering, QA, and product teams to streamline deployment workflows, improve observability, and ensure operational excellence. Strong background in Docker-based containerization, cloud monitoring, and production troubleshooting across multiple environments. Adept at supporting regulated and mission-critical systems while maintaining high standards for security, stability, and performance.

Professional Skills

Senior Software Engineer

Web Venturez LLC | February 2020 - October 2025

- Designed, built, and maintained cloud-based SaaS platforms with a strong emphasis on deployment automation, reliability, and operational stability.
- Implemented and optimized CI/CD pipelines to enable consistent, repeatable, and low-risk deployments across development, staging, and production environments.
- Managed AWS infrastructure including EC2, S3, RDS, IAM, CloudWatch, and container-based services to support scalable application workloads.
- Introduced Infrastructure as Code practices using Terraform and CloudFormation to standardize environment provisioning and reduce configuration drift.
- Supported containerized applications using Docker and AWS ECS, ensuring smooth rollout and rollback strategies during releases.
- Implemented monitoring, logging, and alerting solutions to improve observability and reduce mean time to detection and resolution of incidents.
- Collaborated closely with developers and QA teams to troubleshoot deployment and infrastructure issues across multiple environments.
- Improved security posture through IAM best practices, secrets management, and controlled network access within cloud

environments.

- Automated routine operational tasks using scripting to reduce manual effort and increase platform reliability.
- Contributed to cost optimization efforts by analyzing resource utilization and improving infrastructure efficiency.
- Provided technical guidance on DevOps best practices while maintaining a hands-on role within the engineering team.

Full Stack Engineer

Webiz Digital | July 2017 - January 2020

- Developed and supported cloud-hosted web applications while assisting with deployment and environment configuration activities.
- Worked closely with DevOps and backend teams to support CI/CD workflows and improve release reliability.
- Assisted in managing AWS-based infrastructure components to ensure application availability and performance.
- Helped containerize services using Docker to improve consistency across development and deployment environments.
- Supported monitoring and logging efforts to identify and resolve production issues efficiently.
- Collaborated with cross-functional teams in Agile environments to support frequent releases and updates.
- Participated in troubleshooting infrastructure and deployment issues affecting application stability.
- Contributed to improving deployment documentation and operational processes.
- Gained hands-on experience with cloud architecture, automation, and DevOps tooling.

Software Developer

Centric Tech Inc. | October 2013 - June 2017

- Built and maintained backend services and internal applications supporting business-critical systems.
 - Supported early cloud deployments and assisted with environment setup and configuration.
 - Collaborated with senior engineers to understand infrastructure, deployment workflows, and production operations.
 - Assisted in debugging, performance tuning, and resolving production incidents.
 - Helped automate basic operational tasks to improve system reliability.
 - Worked closely with cross-functional teams to deliver stable and maintainable software solutions.
 - Developed a strong foundation in software engineering, system reliability, and operational best practices.
-
