SKILLS

Cloud Platforms

AWS, GCP, Azure (foundational knowledge)

Containers & Orchestration

Docker, Kubernetes, EKS, GKE

Infrastructure as Code

Terraform, AWS CloudFormation

CI/CD & Automation

GitHub Actions, Jenkins, GitLab CI, Azure DevOps

Observability & Monitoring

Prometheus, Grafana, ELK Stack, Datadog

eBPF & Cloud Networking

Cilium, Falco, Hubble, Kubernetes Networking, VPC, Load Balancers, TLS/SSL

Configuration Management

Ansible

Scripting & OS

Linux, Bash, Python

Security & Compliance

Secrets Management, IAM, Access Controls, Zero Trust Principles

EDUCATION

Florida State University

Bachelor of Computer Science
2009 - 2013

Professional Summary

Senior Software Engineer with 9+ years of experience designing, automating, and operating cloud-native infrastructure and production systems across AWS and GCP. Strong background in DevOps practices including CI/CD pipeline design, Kubernetes-based deployments, infrastructure as code, and production monitoring. Experienced in building reliable, scalable systems using Terraform, Docker, Kubernetes, and modern cloud services. Proven ability to collaborate closely with development teams to improve deployment velocity, system reliability, and operational visibility. Hands-on engineer with deep Linux expertise, strong scripting skills, and a focus on automation, security, and observability in distributed environments.

Professional Skills

Senior Software Engineer

Web Venturez LLC | February 2020 - October 2025

- Designed, implemented, and maintained cloud infrastructure on AWS using Terraform, enabling scalable and repeatable environments across multiple production workloads.
- Built and optimized CI/CD pipelines using GitHub Actions and Jenkins, supporting automated builds, tests, security checks, and production deployments.
- Managed containerized applications using Docker and Kubernetes, including deployment, scaling, rolling updates, and production troubleshooting.
- Implemented monitoring, logging, and alerting using Prometheus, Grafana, ELK, and Datadog to improve observability and incident response times.
- Worked closely with development teams to improve deployment reliability, performance tuning, and infrastructure automation across services.
- Handled production releases, automated rollback strategies, and supported on-call rotations to troubleshoot and resolve complex system issues.

Full Stack Engineer

Webiz Digital | July 2017 - January 2020

- Supported cloud-hosted applications by managing deployments, environment configuration, and CI pipelines in AWS-based environments.
- Containerized backend and frontend services using Docker and assisted with early Kubernetes adoption for staging and

production workloads.

- Implemented infrastructure automation scripts and assisted with Terraform-based provisioning under senior guidance.
- Collaborated with backend and frontend teams to improve deployment workflows, testing reliability, and release automation.
- Monitored application performance and availability using centralized logging and basic monitoring tools.
- Contributed to security improvements including environment isolation, access controls, and secrets handling.

Software Developer

Centric Tech Inc. | October 2013 - June 2017

- Worked extensively on Linux-based systems supporting internal and client-facing applications.
 - Assisted in managing deployments, server configuration, and application troubleshooting in production environments.
 - Developed automation scripts in Bash and Python to support build, deployment, and operational workflows.
 - Collaborated with infrastructure and senior engineering teams to improve system stability and performance.
 - Participated in incident resolution, debugging production issues, and implementing long-term fixes.
 - Built a strong foundation in networking concepts, system administration, and production support practices.
-
