LinkedIn: linkedin.com/in/tyler-roberts-a7b0953a0

SKILLS

Programming

Golang, Node.js, JavaScript, TypeScript, Python

Backend

REST APIs, GraphQL, Microservices, Event-Driven Architecture, Distributed Systems

Cloud

AWS, AWS Lambda, API Gateway, DynamoDB, Serverless Architecture, Cloud-Native Design

Architecture

Service-Oriented Architecture, Circuit Breakers, Distributed Tracing, Scalability & Reliability Patterns

DevOps & Observability

CI/CD, Infrastructure as Code, Monitoring, Logging, Metrics

Integration

Third-Party APIs, Content & Data Pipelines, Platform Integrations

EDUCATION

Florida State University

Bachelor of Computer Science
2009 - 2013

Professional Summary

Senior Software Engineer with 12+ years of experience designing, building, and operating backend platforms, APIs, and cloud-native systems for content-heavy and data-intensive applications. Strong expertise in Golang and Node.js for building scalable microservices, GraphQL APIs, and event-driven systems in distributed environments. Proven background in AWS serverless architectures, including Lambda, API Gateway, DynamoDB, and cloud-native observability patterns. Experienced in media-style workloads involving high-throughput APIs, asynchronous processing, and reliability-focused system design. Adept at owning systems end-to-end, collaborating across product and platform teams, and delivering long-term, production-grade solutions with a strong focus on performance, scalability, and maintainability.

Professional Skills

Senior Software Engineer

Web Venturez LLC | February 2020 - October 2025

- Designed and implemented backend services using Golang and Node.js to support scalable, content-driven SaaS platforms with high API throughput and strict reliability requirements.
- Built and maintained GraphQL and REST APIs that aggregated data from multiple microservices, enabling efficient data access patterns for frontend and partner integrations.
- Architected AWS serverless solutions leveraging Lambda, API Gateway, DynamoDB, and event-driven workflows to improve scalability, cost efficiency, and fault tolerance.
- Implemented microservice architecture patterns including service isolation, circuit breakers, asynchronous messaging, and distributed tracing to support resilient systems.
- Owned complex integrations end-to-end, ensuring reliable data ingestion, processing, and delivery across distributed services.
- Improved system observability by introducing structured logging, metrics, and monitoring, reducing incident response times and improving operational stability.
- Collaborated closely with product and platform teams to translate evolving requirements into production-ready backend solutions while maintaining clean, maintainable codebases.

Full Stack Engineer

Webiz Digital | July 2017 - January 2020

- Developed backend APIs and services using Node.js to support content-rich web applications with dynamic data

requirements.

- Worked on microservice-based systems handling API orchestration, data aggregation, and integration with third-party services.
- Contributed to the design and implementation of scalable backend components deployed on AWS infrastructure.
- Collaborated with frontend teams to optimize API contracts, improve performance, and reduce payload sizes for content-heavy user experiences.
- Participated in code reviews, refactoring efforts, and architectural discussions to improve system maintainability and scalability.
- Supported production systems by debugging issues, optimizing performance, and ensuring high availability across services.

Software Developer

Centric Tech Inc. | October 2013 - June 2017

- Built and maintained backend application logic and APIs supporting internal and customer-facing systems.
 - Implemented service-oriented designs that laid the groundwork for later microservice and distributed system architectures.
 - Worked with senior engineers to improve system reliability, performance, and scalability under growing workloads.
 - Assisted with API development, data modeling, and backend integrations across multiple systems.
 - Participated in production support, troubleshooting, and performance tuning activities.
 - Established a strong foundation in backend engineering best practices, clean code, and system design principles.
-
