SKILLS

Programming

Golang, Python, JavaScript, TypeScript

Backend

GraphQL APIs, GraphQL Federation, Apollo Router, REST APIs, Microservices, Distributed Systems

Cloud

AWS, Serverless Architecture, Cloud-Native Systems

Architecture

Service Migration, Legacy System Refactoring, Event-Driven Architecture, API Design

Practices

Automated Testing, Debugging & Root Cause Analysis, Code Reviews, Performance Optimization

EDUCATION

Florida State University

Bachelor of Computer Science
2009 - 2013

Professional Summary

Senior Software Engineer with 9+ years of experience designing, migrating, and operating backend services in fast-moving, distributed environments. Strong expertise in Golang and Python with a proven track record of refactoring legacy systems into high-performance, maintainable, and well-tested services. Deep experience building and owning APIs, microservices, and cloud-native systems, with hands-on exposure to GraphQL-based architectures and schema-driven development. Adept at debugging complex production issues, improving system reliability, and accelerating delivery through pragmatic tooling and automation. Known for operating with high autonomy while collaborating closely with cross-functional and globally distributed teams to deliver business-critical migrations and platform improvements.

Professional Skills

Senior Software Engineer

Web Venturez LLC | February 2020 - October 2025

- Led the design and development of backend services using Python and Golang, supporting high-traffic SaaS platforms with complex business logic and distributed system requirements.
- Refactored and modernized legacy Python services, incrementally migrating critical components to Golang to improve performance, reliability, and long-term maintainability.
- Designed and maintained API layers, including GraphQL and REST-based services, ensuring clear schema definitions, backward compatibility, and strong validation practices.
- Diagnosed and resolved complex production issues across distributed services by performing deep debugging, log analysis, and root-cause investigations.
- Collaborated closely with cross-functional and internationally distributed teams to plan migrations, align on technical approaches, and deliver changes with minimal customer impact.
- Improved code quality and system stability by introducing stronger automated testing practices, code reviews, and structured refactoring workflows.

Full Stack Engineer

Webiz Digital | July 2017 - January 2020

- Developed backend services primarily in Python and JavaScript, supporting data-heavy applications and API-driven frontend workflows.
- Built and maintained scalable APIs that served as the

foundation for web and integration use cases, emphasizing clean interfaces and predictable behavior.

- Contributed to early service decomposition efforts, helping transition monolithic logic into smaller, more maintainable backend components.

- Worked closely with other engineers to debug complex issues across application layers, improving overall system robustness and performance.

- Participated in code reviews, refactoring initiatives, and architectural discussions to improve long-term maintainability and delivery speed.

- Adapted quickly to new tools, frameworks, and internal processes in a fast-paced consulting environment with shifting requirements.

Software Developer

Centric Tech Inc. | October 2013 - June 2017

- Implemented backend application logic and APIs using Python and related technologies, supporting internal and client-facing systems.

- Maintained and enhanced existing services while gradually improving code structure, test coverage, and documentation.

- Assisted in debugging and resolving production issues by analyzing logs, tracing execution paths, and collaborating with senior engineers.

- Gained hands-on experience with distributed system concepts, API design, and backend performance tuning.

- Worked closely with cross-functional teams to translate business requirements into reliable technical implementations.

- Built a strong foundation in software engineering best practices that enabled future ownership of complex backend systems.
