SKILLS

Programming

Java, Python, JavaScript, TypeScript

Backend & APIs

RESTful API Design, API Integration, Microservices Architecture, Event-Driven Systems, Data Synchronization

Cloud & Platforms

AWS, Amazon Bedrock, Serverless Architecture, Cloud-Native Systems

Data & Automation

Bedrock Data Automation, Data Mapping, Data Transformation, Automation Scripts, Workflow Orchestration

DevOps & CI/CD

Docker, CI/CD Pipelines, Infrastructure as Code, Observability & Monitoring

EDUCATION

Florida State University

Bachelor of Computer Science
2009 - 2013

Professional Summary

Senior Software Engineer with 9+ years of experience designing and delivering cloud-native, API-driven platforms with a strong focus on backend architecture, data automation, and system integrations. Extensive experience building and owning scalable RESTful and event-driven APIs, enabling reliable data synchronization and transformation across distributed systems. Proven expertise in AWS-based architectures, automation workflows, and modern CI/CD practices, supporting fast-paced delivery environments. Hands-on experience integrating data pipelines, mapping complex data models, and implementing automation scripts to reduce operational overhead and improve reliability. Strong background collaborating with cross-functional teams to translate complex requirements into maintainable, high-performance technical solutions.

Professional Skills

Senior Software Engineer

Web Venturez LLC | February 2020 - October 2025

- Designed and implemented robust Java and Python-based APIs to support data-driven SaaS platforms operating at enterprise scale.
- Built and maintained API integrations enabling automated data synchronization between internal systems and third-party platforms.
- Implemented data mapping and transformation logic to ensure consistency and accuracy across distributed data workflows.
- Developed automation scripts and backend services to streamline data ingestion, processing, and system interoperability.
- Architected cloud-native solutions on AWS with a focus on scalability, fault tolerance, and performance optimization.
- Integrated Amazon Bedrock services to support data automation and intelligent processing workflows.
- Collaborated with product and domain stakeholders to rapidly deliver API-centric solutions in a fast-paced environment.
- Improved system reliability through structured logging, metrics, and proactive monitoring across services.
- Owned end-to-end lifecycle of backend services, from design and development to deployment and production support.
- Enhanced CI/CD pipelines to accelerate delivery while maintaining high code quality and compliance standards.

Full Stack Engineer

Webiz Digital | July 2017 - January 2020

- Developed and maintained backend APIs supporting data-

heavy web applications and integration workflows.

- Implemented RESTful services to enable seamless communication between frontend applications and backend systems.

- Worked on data transformation and validation logic to ensure reliable system-to-system data exchanges.

- Collaborated with backend and frontend teams to design scalable application architectures.

- Supported automation efforts by building scripts and services to reduce manual data handling.

- Deployed and maintained applications in AWS-based environments with a focus on stability and performance.

- Troubleshoot and resolved integration issues related to data flow and API reliability.

- Participated in code reviews and refactoring initiatives to improve maintainability and performance.

- Assisted in designing backend components that supported rapid feature development.

- Worked closely with stakeholders to deliver features aligned with business and technical requirements.

Software Developer

Centric Tech Inc. | October 2013 - June 2017

- Built backend services and APIs supporting internal and client-facing business applications.

- Implemented application logic focused on data processing, validation, and persistence.

- Supported early-stage data integration and automation initiatives across systems.

- Collaborated with senior engineers to understand system architecture and backend design patterns.

- Assisted in debugging and optimizing data-related workflows in production environments.

- Contributed to API enhancements improving system interoperability and reliability.

- Worked across teams to deliver backend features aligned with project timelines.
