SKILLS

Programming

Java 21, Python 3.12/3.13, TypeScript, JavaScript, C# (.NET 8/.NET 10)

Backend

Spring Boot 3.x, Spring Security, Spring Data JPA, Django 5.x, Flask 3.x, Node.js, Express, REST API Design, Microservices Architecture, Event-Driven Systems

Frontend

React, TypeScript, Modern React Hooks, Performance Debugging

Real-Time & Integration

Socket.IO, WebSockets, Azure Event Hubs, Asynchronous Messaging, Distributed Systems

Data

SQL Server, T-SQL, Query Optimization, Transactional Data Modeling, CI/CD-Friendly Schema Migrations

Cloud & DevOps

Microsoft Azure, Azure App Service, Azure Container Apps, Azure Functions, Azure Service Bus, Azure Monitor, Application Insights, OpenTelemetry, CI/CD Pipelines

Testing & Quality

JUnit 5, Mockito, pytest, Automated Unit & Integration Testing, Observability & Reliability Engineering

EDUCATION

Florida State University

Bachelor of Computer Science
2009 - 2013

Professional Summary

Senior Software Engineer with 10+ years of hands-on experience designing, building, and operating cloud-native platforms across Java, Python, Node.js, React, and Microsoft Azure. Proven Lead Architect-level contributor who drives architecture while remaining deeply involved in daily coding, code reviews, and production support. Strong background in building secure, scalable microservices using Java 21 with Spring Boot, Python (Django and Flask), and Node.js, with a focus on reliability, performance, and observability. Extensive experience designing event-driven and real-time systems using Azure Service Bus, WebSockets, and Socket.IO, including enterprise-grade security with Azure AD/Entra ID, OAuth2/OIDC, Managed Identity, and Key Vault. Known for mentoring distributed teams, enforcing engineering standards, and translating complex business and platform requirements into robust, production-ready systems.

Professional Skills

Senior Software Engineer

Web Venturez LLC | February 2020 - October 2025

- Led hands-on architecture and daily development of cloud-native platforms using Java 21 with Spring Boot, Python (Django and Flask), Node.js, and React, delivering production features with strong test coverage and performance guarantees.
- Designed and implemented scalable microservices and event-driven workflows on Microsoft Azure, leveraging App Service, Container Apps, Azure Functions, and Service Bus with retries, DLQs, and idempotent processing patterns.
- Built and maintained secure enterprise integrations using Azure AD/Entra ID, OAuth2/OIDC, JWT, Managed Identity, and Azure Key Vault, ensuring compliance, secret rotation, and least-privilege access across services.
- Developed and scaled real-time communication services using Node.js and Socket.IO/WebSockets, implementing secure connection handling, room and namespace management, and multi-instance scaling patterns.
- Owned SQL Server data models and performance tuning, writing reliable T-SQL queries, transactions, and deployment scripts optimized for CI/CD pipelines and high-throughput workloads.
- Established strong observability practices using Application Insights, Azure Monitor, and OpenTelemetry, enabling proactive

monitoring, rapid incident response, and root-cause analysis in production.

- Mentored offshore and distributed engineers through code reviews, pairing sessions, and architectural guidance, setting engineering standards while remaining an active individual contributor.

Full Stack Engineer

Webiz Digital | July 2017 - January 2020

- Built and evolved full-stack applications using Java, Python, Node.js, and React, contributing to backend API design, frontend performance, and overall system reliability.

- Implemented RESTful services and background processing workflows, focusing on clean architecture, testability, and maintainable service boundaries.

- Collaborated closely with designers and product stakeholders to deliver responsive React interfaces backed by robust backend services.

- Supported early cloud adoption initiatives, gaining hands-on experience with Azure-hosted services, deployments, and environment configuration.

- Improved application stability and performance through refactoring, code reviews, and the introduction of automated testing practices.

- Participated in cross-team collaboration to integrate third-party systems and ensure reliable data exchange across distributed components.

Software Developer

Centric Tech Inc. | October 2013 - June 2017

- Developed backend services and web applications using JavaScript, Java, and early Python services, supporting internal and client-facing systems.

- Implemented APIs and business logic with a focus on correctness, maintainability, and performance under growing workloads.

- Worked alongside senior engineers to understand distributed system design, deployment pipelines, and production support practices.

- Assisted in debugging production issues, performing performance tuning, and improving overall system reliability.

- Collaborated with cross-functional teams to deliver features aligned with business requirements and delivery timelines.

- Built a strong foundation in software engineering best practices that enabled progression into senior and lead-level roles.
