SKILLS

Programming

Java, Java 8+, PL/SQL, JavaScript, TypeScript

Backend

Spring Framework, Spring Boot, REST APIs, SOAP Web Services, Microservices, Application Integration

Frontend

Angular, Node.js, jQuery, HTML, CSS

Databases

Oracle, PL/SQL, Database Design, Performance Tuning

DevOps & Tools

Git, Maven, Ant, Jenkins, SonarQube, CI/CD, JIRA

Platforms

Linux, WildFly (JBoss), WebSphere

Methodologies

Agile, Scrum, SDLC, Code Reviews, Technical Documentation

Domain

Healthcare Systems, Enterprise Applications, Secure and Compliant Systems

EDUCATION

Florida State University

Bachelor of Computer Science
2009 - 2013

Professional Summary

Senior Software Engineer with 9+ years of experience delivering enterprise-grade Java applications in regulated and high-availability environments. Strong background in designing, developing, and maintaining scalable backend systems using Java, Spring Framework, REST and SOAP services, and relational databases. Proven ability to act as an individual contributor and technical lead, owning features end-to-end while guiding teams through architecture, design, and implementation decisions. Experienced working across the full SDLC in Agile environments, producing low-level design documentation, conducting code reviews, and ensuring high-quality, secure, and maintainable solutions. Adept at collaborating with business analysts, product owners, and stakeholders to translate complex business and healthcare requirements into robust technical solutions.

Professional Skills

Senior Software Engineer

Web Venturez LLC | February 2020 - October 2025

- Designed, developed, and maintained enterprise Java applications using Spring Framework, REST, and SOAP web services to support complex business workflows and third-party integrations.
- Served as a technical lead on multiple development initiatives, providing architectural guidance, reviewing designs, and ensuring alignment with long-term platform strategy.
- Worked independently and collaboratively in Agile teams to deliver high-quality features end-to-end, from requirements analysis and low-level design through implementation and production support.
- Authored detailed technical specifications, low-level design documents, and implementation checklists to support maintainable and scalable system development.
- Performed code reviews, identified performance and security issues, and guided developers on best practices, refactoring, and continuous improvement.
- Collaborated closely with business analysts and stakeholders to translate complex requirements into robust technical solutions while adhering to corporate, security, and compliance standards.

Full Stack Engineer

Webiz Digital | July 2017 - January 2020

- Developed full-stack enterprise applications using Java,

Spring, Angular, and Node.js, supporting dynamic user interfaces and scalable backend services.

- Built and maintained RESTful and SOAP services, handling payload design, error handling, and service orchestration for internal and external system integrations.

- Worked with relational databases and PL/SQL to design schemas, write complex queries, and optimize performance for data-intensive applications.

- Participated in Agile ceremonies, sprint planning, and backlog grooming while providing accurate effort estimates and technical input for new features.

- Deployed and supported applications on enterprise web servers, ensuring reliability, uptime, and smooth release processes.

- Contributed to improving development processes through documentation, peer reviews, and adherence to SDLC and quality standards.

Software Developer

Centric Tech Inc. | October 2013 - June 2017

- Developed and maintained Java-based enterprise applications, contributing to backend services, integrations, and core business functionality.

- Implemented REST and SOAP web services and assisted in integrating third-party systems within larger enterprise platforms.

- Worked extensively with PL/SQL, writing stored procedures, complex queries, and supporting database performance tuning efforts.

- Collaborated with senior engineers and cross-functional teams to analyze requirements, participate in design sessions, and deliver reliable solutions.

- Supported production systems by troubleshooting issues, analyzing logs, and resolving defects to maintain system stability and uptime.

- Built a strong foundation in software engineering best practices, documentation, and secure development within enterprise environments.
