SKILLS

Programming

Java 21, Spring Boot 3.x, Hibernate, JavaScript, TypeScript, Node.js, Python

Backend & Architecture

Microservices Architecture, RESTful APIs, Distributed Systems, Event-Driven Architecture, High-Volume Transaction Processing

Cloud & DevOps

AWS, Azure, Docker, Kubernetes, CI/CD Pipelines, Jenkins, Infrastructure as Code, Cloud Security

Data & Messaging

SQL, NoSQL, Kafka, Hadoop, High-Performance Data Processing

Security & Compliance

PCI DSS, GDPR, Secure Credential Provisioning, Encryption, Authentication & Authorization

Frontend

React, Angular

EDUCATION

Florida State University

Bachelor of Computer Science
2009 - 2013

Professional Summary

Senior Software Engineer with 9+ years of experience designing, building, and owning cloud-native, compliance-driven SaaS and FinTech platforms. Strong expertise in Java (Spring Boot 3.x), microservices architecture, and high-volume transaction systems within regulated environments such as healthcare and payments. Proven ability to lead engineering teams, define technical strategy, and deliver secure, scalable, and fault-tolerant systems on AWS and Azure. Hands-on leader with deep experience in distributed systems, CI/CD, cloud security, and end-to-end ownership of complex integrations. Adept at collaborating with product, compliance, and business stakeholders to translate regulatory and business requirements into reliable, production-grade solutions.

Professional Skills

Senior Software Engineer

Web Venturez LLC | February 2020 - October 2025

- Led the design and development of Java-based microservices using Spring Boot and Hibernate to support scalable, high-availability SaaS and FinTech platforms in regulated environments.
- Defined technical architecture and development standards to ensure secure, fault-tolerant systems capable of handling high transaction volumes and sensitive healthcare and payment data.
- Owned complex third-party integrations end-to-end, including secure API integrations, data validation, error handling, and observability across distributed systems.
- Implemented CI/CD pipelines, containerization with Docker, and orchestration using Kubernetes to streamline deployments and improve system reliability and scalability.
- Collaborated closely with product managers, compliance teams, and business stakeholders to translate functional and regulatory requirements into robust technical solutions.
- Improved platform performance, security, and operational visibility by introducing structured logging, monitoring, and proactive performance tuning across services.

Full Stack Engineer

Webiz Digital | July 2017 - January 2020

- Developed and maintained full-stack applications using Java, Node.js, and React, supporting data-intensive business workflows and customer-facing platforms.
- Designed and implemented RESTful APIs and backend services with a focus on scalability, maintainability, and secure data

access.

- Worked with cloud-hosted environments, contributing to AWS-based deployments and gaining hands-on experience with containerized applications.

- Collaborated with cross-functional teams to enhance existing systems, refactor legacy components, and improve overall application performance.

- Supported integration efforts with external systems, ensuring reliable data exchange and consistent system behavior across environments.

- Actively participated in Agile ceremonies, code reviews, and architectural discussions to improve code quality and delivery velocity.

Software Developer

Centric Tech Inc. | October 2013 - June 2017

- Built and maintained backend services and internal applications using Java and related technologies to support core business operations.

- Implemented APIs, database interactions, and business logic with a strong focus on correctness, performance, and maintainability.

- Assisted in the design and evolution of early distributed system components, gaining experience with scalable application patterns.

- Worked closely with senior engineers to debug production issues, optimize performance, and improve system reliability.

- Collaborated with multiple teams to deliver features aligned with business requirements and project timelines.

- Developed a strong foundation in software engineering best practices, version control, and production support processes.
