LinkedIn: linkedin.com/in/tyler-roberts-a7b0953a0

SKILLS

Programming

Java, TypeScript, Python, Golang

Backend

Spring Boot, Spring Cloud, REST APIs, GraphQL, Microservices, Event-Driven Architecture

Cloud

AWS, ECS, Fargate, EC2, S3, IAM, Secrets Manager

Databases

PostgreSQL, MongoDB, SQL Optimization, Schema Design

Data & Streaming

Kafka, ETL Pipelines, Data Lakes, Snowflake

DevOps

Docker, Kubernetes, CI/CD, GitHub Actions, Jenkins, GitLab CI

Observability & Security

Prometheus, Datadog, ELK Stack, JWT, OAuth2

EDUCATION

Florida State University

Bachelor of Computer Science
2009 - 2013

Professional Summary

Senior Software Engineer with 9+ years of experience building and owning cloud-native, backend-heavy platforms with a strong focus on Java, Spring Boot, distributed systems, and AWS infrastructure. Proven expertise designing and operating scalable microservices, event-driven architectures, and data pipelines that power mission-critical and high-throughput applications. Strong background in cloud platforms, CI/CD automation, containerization, and production observability. Adept at working in core platform and architecture teams, owning systems end-to-end, and mentoring engineers through hands-on technical leadership. Experienced in building secure, compliant backend systems with modern authentication, data integrity, and reliability requirements.

Professional Skills

Senior Software Engineer

Web Venturez LLC | February 2020 - October 2025

- Designed, developed, and maintained scalable backend services using Java 17, Spring Boot, and Spring Cloud to support high-traffic, cloud-native SaaS platforms.
- Built and owned microservices architectures deployed on AWS using ECS, Fargate, EC2, S3, IAM, and Secrets Manager with a strong focus on security and reliability.
- Designed and implemented event-driven systems using Kafka and asynchronous messaging to enable scalable data processing and system decoupling.
- Developed and optimized REST and GraphQL APIs, managing the full API lifecycle including versioning, monitoring, and backward compatibility.
- Implemented caching strategies using Redis and in-memory caching to improve latency, throughput, and database efficiency.
- Built and maintained CI/CD pipelines using GitHub Actions and Jenkins, automating testing, security checks, container builds, and deployments.
- Containerized backend services using Docker and orchestrated deployments with Kubernetes to improve scalability and operational consistency.
- Implemented JWT and OAuth2-based authentication and authorization mechanisms to secure distributed systems and sensitive data flows.
- Designed PostgreSQL and MongoDB schemas, optimized SQL queries, and improved database performance for high-volume workloads.

- Deployed observability and monitoring solutions using Datadog, Prometheus, and ELK to improve system visibility and incident response.
- Collaborated closely with product and architecture teams, providing hands-on technical leadership and mentoring engineers on backend and cloud best practices.

Full Stack Engineer

Webiz Digital | July 2017 - January 2020

- Developed backend services using Java and Spring Boot to support business-critical web applications and integrations.
- Designed and implemented RESTful APIs with a focus on scalability, maintainability, and clear service boundaries.
- Built and maintained cloud-hosted applications on AWS, contributing to infrastructure configuration and deployment workflows.
- Integrated third-party APIs and external services, ensuring reliable data exchange and robust error handling.
- Worked with PostgreSQL databases, designing schemas and optimizing SQL queries for performance and correctness.
- Containerized applications using Docker to standardize development and deployment environments.
- Supported CI/CD workflows and automated builds to improve release reliability and deployment speed.
- Collaborated with frontend engineers to ensure seamless integration between backend services and React-based UIs.
- Participated in code reviews, refactoring efforts, and architectural discussions to improve overall system quality.

Software Developer

Centric Tech Inc. | October 2013 - June 2017

- Developed backend services and web applications using Java and JavaScript to support internal and client-facing systems.
 - Implemented application logic, APIs, and data access layers following established software engineering best practices.
 - Worked with relational databases to design schemas, write SQL queries, and maintain data integrity.
 - Assisted with debugging, performance tuning, and resolving production issues in live environments.
 - Collaborated with senior engineers to understand system architecture, deployment pipelines, and operational workflows.
 - Contributed to early distributed system designs and backend modernization initiatives.
 - Built a strong foundation in clean code, testing, and maintainable software design.
-
