LinkedIn: linkedin.com/in/tyler-roberts-a7b0953a0

SKILLS

Programming

JavaScript, TypeScript, Node.js, Python

Backend

REST APIs, Low-Latency Systems, Distributed Systems, Event-Driven Architecture, Microservices

Cloud

AWS, Serverless Architecture, Cloud-Native Design

Databases

SQL, PostgreSQL, MySQL, Redis, Valkey

DevOps & Tooling

GitHub, GitHub Actions, CI/CD, Docker, Observability

Data & Streaming

Apache Kafka, Real-Time Data Processing

Networking

Network Fundamentals, SIP, VOIP, Telecom Protocols

Testing

Automated Testing, Unit Testing, Integration Testing

EDUCATION

Florida State University

Bachelor of Computer Science
2009 - 2013

Professional Summary

Senior Software Engineer with 9+ years of experience designing, building, and operating high-performance backend systems using Node.js, TypeScript, and AWS. Strong background in developing low-latency, cloud-native services, scalable APIs, and data-intensive platforms that require reliability, security, and performance under real-world workloads. Proven ability to own backend services end-to-end, from architecture and implementation to testing, deployment, and observability. Experienced working in distributed teams and collaborating closely with engineering leadership to deliver resilient systems. Known for disciplined engineering practices, clean code, and a strong focus on maintainability, performance optimization, and production readiness.

Professional Skills

Senior Software Engineer

Web Venturez LLC | February 2020 - October 2025

- Designed, built, and maintained multiple production Node.js and TypeScript backend services running on AWS, supporting real-time and data-intensive SaaS platforms.
- Implemented new backend features with a strong focus on low-latency performance, scalability, and reliability, ensuring systems met strict production SLAs.
- Owned cloud-native services end-to-end, including API design, database integration using SQL, deployment automation, and production monitoring.
- Collaborated closely with engineering leadership and cross-functional stakeholders to ensure backend systems were secure, observable, and resilient under load.
- Improved code quality and long-term maintainability by introducing automated tests, enforcing clean architecture principles, and performing regular refactoring.
- Contributed to CI/CD pipelines using GitHub Actions, enabling reliable deployments and faster feedback cycles for backend services.

Full Stack Engineer

Webiz Digital | July 2017 - January 2020

- Developed and maintained backend services using Node.js, working closely with frontend teams to support data-heavy and performance-sensitive workflows.
- Designed RESTful APIs and backend logic with a strong emphasis on correctness, security, and efficient SQL database

access.

- Supported cloud deployments and environment configuration, gaining hands-on experience with AWS-based infrastructure and service integrations.

- Collaborated in small, distributed teams, contributing to code reviews, technical discussions, and shared ownership of production systems.

- Improved system stability by identifying performance bottlenecks, optimizing queries, and enhancing error handling and logging across services.

- Actively contributed to improving development workflows and code quality through testing, documentation, and adherence to best practices.

Software Developer

Centric Tech Inc. | October 2013 - June 2017

- Built and maintained backend services and internal applications using JavaScript and server-side technologies, supporting business-critical systems.

- Implemented application logic and database interactions with a strong focus on data integrity, performance, and maintainable code structure.

- Worked closely with senior engineers to understand system architecture, deployment processes, and production support requirements.

- Assisted with debugging, performance tuning, and reliability improvements in live production environments.

- Collaborated across teams to translate business requirements into technical solutions delivered on schedule.

- Established a strong foundation in disciplined software engineering practices, preparing for senior-level ownership in later roles.
