LinkedIn: linkedin.com/in/tyler-roberts-a7b0953a0

SKILLS

Programming

Python, JavaScript, TypeScript

Frontend

Svelte.js, React, HTML, CSS

Backend & APIs

AWS Lambda, REST APIs, Event-Driven Architecture, Distributed Systems

Cloud & Infrastructure

AWS, Serverless Architecture, Terraform, Infrastructure as Code

Databases & Messaging

DynamoDB, RDS, S3, SNS, SQS

DevOps & Observability

CI/CD, CloudWatch, Monitoring & Alerting, Logging & Tracing

EDUCATION

Florida State University

Bachelor of Computer Science
2009 - 2013

Professional Summary

Senior Software Engineer with 9+ years of experience designing, building, and owning production-grade, cloud-native web applications in regulated and data-sensitive domains. Strong background in Python-based backend services, modern JavaScript frontends, and AWS serverless architectures, with hands-on experience delivering scalable, secure, and observable systems. Proven ability to architect APIs, event-driven workflows, and infrastructure-as-code deployments using Terraform while operating with high autonomy in cross-functional teams. Experienced in collaborating closely with product managers, designers, and stakeholders to translate complex requirements into reliable solutions that perform under real-world production workloads.

Professional Skills

Senior Software Engineer

Web Venturez LLC | February 2020 - October 2025

- Designed, built, and maintained production-grade web applications using modern JavaScript frontends and Python-based backend services deployed on AWS serverless infrastructure.
- Architected and optimized cloud-native solutions leveraging AWS Lambda, API Gateway, DynamoDB, S3, SNS/SQS, and RDS to support scalable, secure, and highly available workloads.
- Defined and implemented infrastructure as code using Terraform, enabling reproducible environments, secure deployments, and consistent configuration across multiple stages.
- Established best practices for API design, error handling, logging, and observability, significantly improving system reliability and reducing mean time to resolution for production incidents.
- Collaborated closely with product managers, designers, and domain stakeholders to translate healthcare and enterprise requirements into maintainable technical solutions.
- Participated in system design reviews, code reviews, and production support rotations while leading by example in clean code, documentation, test coverage, and CI/CD practices.

Full Stack Engineer

Webiz Digital | July 2017 - January 2020

- Developed and supported full-stack web applications using JavaScript frontends and backend services, contributing to end-to-end feature delivery in cloud-hosted environments.
- Built RESTful APIs and backend logic in Python and Node.js to support dynamic, data-driven user interfaces and third-party

integrations.

- Worked with cloud infrastructure and deployment pipelines, gaining hands-on experience with AWS services and early infrastructure-as-code practices.
- Collaborated with designers and product stakeholders to enhance existing applications while maintaining performance, security, and usability standards.
- Improved application stability through debugging, performance tuning, and proactive monitoring of production systems.
- Contributed to code reviews and refactoring efforts to improve maintainability, consistency, and long-term scalability.

Software Developer

Centric Tech Inc. | October 2013 - June 2017

- Built and maintained backend services and web applications supporting internal and client-facing business systems in a production environment.
 - Implemented application logic and APIs using JavaScript and backend technologies, contributing to early distributed system designs.
 - Worked closely with senior engineers to understand system architecture, deployment workflows, and operational support processes.
 - Assisted with debugging, performance optimization, and reliability improvements for production applications.
 - Collaborated across teams to deliver features aligned with business requirements, timelines, and quality expectations.
 - Developed a strong foundation in software engineering best practices, setting the stage for senior-level ownership and system design responsibilities.
-
