LinkedIn: linkedin.com/in/tyler-roberts-a7b0953a0

SKILLS

Programming

TypeScript, Python, Golang, JavaScript

Frontend

React, Next.js, HTML, CSS

Backend

REST APIs, Distributed Systems, Microservices, Event-Driven Architecture

Cloud

AWS, Cloud-Native Architecture, Serverless, GCP

Databases

DynamoDB, RDS, PostgreSQL, SQL

DevOps

Docker, CI/CD, GitHub Actions, ArgoCD, Flux, Infrastructure as Code, Observability

AWS Services

EC2, EKS, SQS, SNS

Leadership

Technical Leadership, Cross-Team Collaboration, Architecture Design, Technical Documentation

EDUCATION

Florida State University

Bachelor of Computer Science
2009 - 2013

Professional Summary

Senior Software Engineer with 9+ years of experience designing, building, and leading cloud-native full stack systems in fast-paced, agile environments. Proven expertise across TypeScript, Python, Golang, AWS, Docker, and CI/CD, with a strong focus on scalable architectures, developer platforms, and reliable distributed systems. Demonstrated ability to lead engineers, collaborate across teams, and translate complex requirements into production-ready solutions. Extensive hands-on experience with AWS services, modern DevOps workflows, and end-to-end ownership of full stack applications. Known for clear technical communication, strong architectural judgment, and delivering high-impact systems used at scale.

Professional Skills

Senior Software Engineer

Web Venturez LLC | February 2020 - October 2025

- Led the design and development of cloud-native full stack applications using TypeScript, Python, and modern frontend frameworks in an agile environment.
- Architected scalable backend services and APIs on AWS, leveraging services such as EC2, EKS, DynamoDB, RDS, SQS, and SNS to support enterprise workloads.
- Implemented containerized deployments using Docker and automated CI/CD pipelines with GitHub Actions and ArgoCD to streamline developer workflows.
- Collaborated across multiple engineering teams to align architecture, standards, and delivery timelines while providing technical leadership and guidance.
- Built and maintained developer platforms and internal tooling to improve productivity, reliability, and deployment consistency.
- Owned end-to-end troubleshooting of application code, infrastructure configurations, and cloud environments to ensure high availability and performance.
- Produced clear technical documentation and architectural diagrams to enable engineers to effectively consume and extend platform capabilities.
- Drove architectural decisions around distributed systems, data consistency, and scalability to support long-term platform growth.
- Worked closely with product and stakeholders to translate evolving requirements into robust, maintainable technical solutions.

Full Stack Engineer

Webiz Digital | July 2017 - January 2020

- Developed full stack applications using JavaScript, TypeScript, React, and backend services deployed on AWS infrastructure.
- Designed and implemented RESTful APIs and backend services with a focus on performance, security, and scalability.
- Containerized applications using Docker and supported deployment workflows across development and production environments.
- Collaborated with cross-functional teams to deliver features in an agile, fast-paced environment.
- Integrated cloud services and databases to support data-intensive business workflows and third-party integrations.
- Assisted in CI/CD setup and automation to improve release reliability and reduce manual deployment effort.
- Troubleshoot application issues across frontend, backend, and cloud infrastructure layers.
- Contributed to technical documentation and shared best practices across the engineering team.
- Continuously improved code quality through refactoring, reviews, and adherence to modern design patterns.

Software Developer

Centric Tech Inc. | October 2013 - June 2017

- Built and maintained backend services and web applications supporting internal and client-facing systems.
 - Implemented business logic and APIs using JavaScript and backend technologies within distributed system architectures.
 - Collaborated with senior engineers to understand and apply common design patterns and architectural best practices.
 - Supported deployments, configuration management, and production troubleshooting across multiple environments.
 - Worked with databases and data models to ensure correctness, performance, and scalability.
 - Participated in agile development processes, including planning, estimation, and iterative delivery.
 - Improved system reliability by addressing bugs, performance bottlenecks, and operational issues.
-
