LinkedIn: linkedin.com/in/tyler-roberts-a7b0953a0

SKILLS

Programming

JavaScript, TypeScript, Python

Frontend

Vue.js, Vite, React, HTML, CSS, Design Systems, Accessibility

Backend

Django, Sanic, REST APIs, Distributed Systems, Microservices

Cloud

AWS, Cloud-Native Architecture, Serverless

DevOps

Docker, CI/CD, Infrastructure as Code, Observability

Product & Delivery

Agile / Scrum, Sprint Planning, Cross-Functional Collaboration, Technical Design Reviews

EDUCATION

Florida State University

Bachelor of Computer Science
2009 - 2013

Professional Summary

Senior Software Engineer with 9+ years of experience designing and delivering scalable, cloud-native web platforms with a strong emphasis on frontend architecture and full-stack ownership. Extensive background building modern, reactive user interfaces and shared design systems that translate complex product workflows into intuitive, accessible experiences. Proven ability to partner closely with Product and UX to shape greenfield platforms, define frontend standards, and deliver durable systems through sprint-based execution. Hands-on experience across Vue, React, Node.js, Python, and AWS, with a strong focus on maintainability, performance, and long-term platform evolution in real-world production environments.

Professional Skills

Senior Software Engineer

Web Venturez LLC | February 2020 - October 2025

- Owned end-to-end development of production web applications, delivering frontend-heavy features while maintaining strong full-stack accountability across APIs, services, and data flows.
- Designed and implemented scalable frontend architecture using modern reactive frameworks, establishing shared patterns for state management, routing, data fetching, and component composition.
- Collaborated closely with Product Managers and UX Designers to translate complex business and workflow requirements into intuitive, accessible, and high-performance user interfaces.
- Built and evolved backend services using Node.js and Python frameworks, ensuring seamless integration with frontend systems and reliable behavior under real-world production workloads.
- Led technical design discussions and contributed to architectural decisions that balanced near-term delivery with long-term maintainability and platform scalability.
- Improved platform reliability and developer velocity by introducing clearer frontend standards, reusable UI components, and improved observability across distributed systems.

Full Stack Engineer

Webiz Digital | July 2017 - January 2020

- Developed full-stack web applications with a strong focus on frontend user experience, building responsive, component-based interfaces aligned with product and design requirements.

- Implemented RESTful APIs and backend services to support complex frontend workflows, ensuring clean contracts and predictable data exchange.
- Worked closely with designers and stakeholders to incrementally enhance UI consistency, usability, and accessibility across multiple client-facing applications.
- Contributed to frontend performance optimization efforts, improving load times and responsiveness in bandwidth-constrained environments.
- Participated actively in Agile delivery processes, including sprint planning, backlog refinement, and code reviews, helping ensure predictable and high-quality releases.
- Strengthened overall code quality through refactoring, shared frontend utilities, and adherence to maintainable architecture patterns.

Software Developer

Centric Tech Inc. | October 2013 - June 2017

- Built and maintained web applications and backend services supporting internal and external business systems in a collaborative engineering environment.
 - Implemented frontend features using HTML, CSS, and JavaScript, working closely with backend logic to deliver cohesive end-user experiences.
 - Assisted in designing and consuming APIs that supported growing application complexity and evolving business requirements.
 - Collaborated with senior engineers to understand system architecture, deployment workflows, and production support processes.
 - Supported debugging, performance tuning, and reliability improvements across frontend and backend components.
 - Established a strong foundation in software engineering best practices, including clean code, version control, and collaborative development.
-
