LinkedIn: linkedin.com/in/tyler-roberts-a7b0953a0

SKILLS

Programming

TypeScript, JavaScript, Node.js, Python

Backend

REST APIs, Distributed Systems, Microservices, Event-Driven Architecture, System Design

Cloud

AWS, GCP, Serverless Architecture, Cloud-Native Systems

Web3 & Platforms

Blockchain Integration Concepts, Digital Asset Systems, Secure System Design, Indexing & Event Processing

DevOps

Docker, CI/CD, Infrastructure as Code, Monitoring & Observability

EDUCATION

Florida State University

Bachelor of Computer Science
2009 - 2013

Professional Summary

Senior Software Engineer with 9+ years of experience designing, building, and owning production-grade, cloud-native systems across Web, backend, and emerging technologies. Strong background in TypeScript, Node.js, and distributed system design, with proven ownership of complex features from concept through production. Experienced in integrating modern platforms, APIs, and data-driven systems into scalable architectures while maintaining reliability, security, and observability. Adept at working in small, high-trust teams where engineers operate with autonomy, contribute to product direction, and take responsibility for long-term technical outcomes.

Professional Skills

Senior Software Engineer

Web Venturez LLC | February 2020 - October 2025

- Owned and delivered complex backend and full-stack features using TypeScript and Node.js, supporting scalable SaaS platforms used by enterprise customers in production environments.
- Designed and implemented cloud-native architectures on AWS, focusing on reliability, scalability, and clean separation between services, APIs, and data layers.
- Led end-to-end integrations with internal and third-party systems, ensuring robust data flows, strong error handling, and clear observability across distributed components.
- Collaborated closely with product managers and domain experts to translate ambiguous requirements into well-architected technical solutions that aligned with long-term platform goals.
- Acted as a technical anchor within the team by setting coding standards, improving system design, and taking full ownership of features from design through deployment and ongoing support.

Full Stack Engineer

Webiz Digital | July 2017 - January 2020

- Built and maintained full-stack web applications using Node.js, TypeScript, and modern frontend frameworks to support cloud-hosted products.
- Designed RESTful APIs and backend services that handled complex business logic, integrations, and data-heavy workflows in production systems.
- Worked closely with designers and product stakeholders to implement responsive, user-focused interfaces while maintaining performance and maintainability.

- Contributed to cloud deployments and environment configuration, gaining hands-on experience with AWS infrastructure and CI/CD pipelines.
- Improved existing codebases through refactoring, code reviews, and adherence to best practices in scalable and secure system design.

Software Developer

Centric Tech Inc. | October 2013 - June 2017

- Developed and maintained backend services and web applications supporting both internal tools and client-facing systems.
 - Implemented application logic and APIs using JavaScript and backend technologies, contributing to early distributed system designs.
 - Collaborated closely with senior engineers to understand system architecture, deployment workflows, and production support processes.
 - Assisted with debugging, performance tuning, and reliability improvements in live environments.
 - Built a strong foundation in software engineering best practices, enabling long-term growth into senior-level ownership roles.
-
