

# William Anderson

Senior Software Engineer

Seminole, FL | [williamandresondev@outlook.com](mailto:williamandresondev@outlook.com) | +1 (407) 801-1287 | <https://www.linkedin.com/in/william-andreson-39b88b3aa>

## Professional Summary

Senior Android Engineer with 9+ years of experience delivering scalable mobile applications in fintech, e-commerce, and real-time service industries, leveraging **Kotlin (1.5–1.9)** and **Java (8–17)** to build high-performance architectures with **MVVM**, **Clean Architecture**, and **Jetpack Compose**, optimizing app startup time by 32% and reducing crash rates by 41% through proactive debugging, memory leak fixes, and efficient API handling, while integrating modern CI/CD pipelines and ensuring seamless migration from legacy Java-based systems to Kotlin-first codebases with improved maintainability and performance.

## Technical Skills

- **Mobile Development:** Android SDK, **Kotlin (1.5–1.9)**, **Java (8–17)**, Jetpack Compose, XML UI, MVVM, MVP, Clean Architecture
- **Architecture & Patterns:** LiveData, Flow, Coroutines, Dependency Injection (**Dagger/Hilt**)
- **Networking & Data:** REST APIs, Retrofit, OkHttp, JSON, SQLite, Room Database
- **Tools & CI/CD:** Gradle, Git, GitHub Actions, Jenkins, Firebase App Distribution
- **Testing & Quality:** JUnit, Espresso, Mockito, UI Testing, Crashlytics
- **Cloud & Integrations:** Firebase (Auth, Firestore, Analytics), AWS APIs
- **Performance & Security:** ProGuard/R8, App Optimization, Secure Storage, JWT

## Professional Experience

### Viaro Networks Inc.

Senior Software Engineer | January 2021 – December 2025

- Led development of a large-scale Android fintech application using **Kotlin (1.6–1.9)** and **Jetpack Compose**, redesigning legacy XML UI into declarative UI which improved rendering performance by 35% and reduced UI bugs significantly.
- Architected modular Android codebase using **Clean Architecture** and **MVVM**, enabling faster feature delivery cycles by 28% and improving maintainability across distributed teams.
- Resolved critical memory leak issues caused by improper lifecycle handling in fragments, introducing lifecycle-aware components and reducing crash rate by 41% in production environments.
- Migrated legacy **Java (8–11)** codebase to **Kotlin**, ensuring backward compatibility while improving null safety and reducing runtime exceptions by 30%.
- Implemented advanced offline caching using **Room Database** and Flow APIs, improving app responsiveness and reducing API dependency failures by 25%.
- Optimized API communication layer using **Retrofit** and **OkHttp interceptors**, reducing network latency impact and improving response handling consistency by 22%.
- Integrated **Firebase Crashlytics** and performance monitoring tools, enabling proactive issue detection and reducing mean time to resolution by 37%.

- Developed secure authentication flows using **JWT** and Firebase Auth, ensuring compliance with security best practices and preventing unauthorized access issues.
- Improved app startup time by profiling cold start bottlenecks and optimizing dependency injection graph, achieving a 32% faster launch time.
- Collaborated with backend teams to redesign API contracts, reducing payload sizes and improving mobile performance under low bandwidth conditions.
- Implemented CI/CD pipelines using **GitHub Actions**, automating build, test, and deployment processes, reducing manual release effort by 40%.
- Delivered new features such as real-time transaction tracking using WebSocket integration, improving user engagement metrics by 18%.

## **VividCloud**

**Software Engineer** | January 2016 – December 2020

- Developed scalable Android applications using **Java (8–11)** and early **Kotlin (1.3–1.5)** adoption, contributing to modernizing legacy mobile systems.
- Implemented RESTful API integrations using **Retrofit**, ensuring stable data synchronization across mobile and backend services with improved error handling.
- Identified and fixed ANR issues caused by heavy operations on the main thread by introducing background processing with Executors and later Coroutines, improving responsiveness by 27%.
- Built reusable UI components using XML layouts and introduced design consistency across multiple app modules.
- Improved database performance by optimizing SQLite queries and introducing indexing strategies, reducing query time by 24%.
- Handled edge-case crashes related to device fragmentation and OS version inconsistencies, improving app stability across Android versions.
- Introduced unit and UI testing practices using **JUnit** and **Espresso**, increasing test coverage and reducing regression defects by 20%.
- Collaborated with QA teams to debug production issues using logs and crash reports, significantly improving release quality.
- Migrated parts of the app to **MVVM architecture**, replacing tightly coupled MVP implementations for better scalability.
- Enhanced push notification systems using Firebase Cloud Messaging, improving delivery reliability and user retention by 15%.

## **Minimalist Moon**

**Software Developer** | January 2013 – December 2015

- Built Android applications using **Java (7–8)** with XML-based UI, focusing on delivering stable and functional mobile products for early-stage clients.
- Developed core features such as user authentication, dashboards, and reporting modules aligned with business requirements.
- Resolved frequent crashes due to improper thread handling by introducing background task execution patterns, improving app stability.
- Optimized network calls using asynchronous patterns, reducing UI blocking issues and improving user experience.
- Maintained legacy code and gradually refactored modules for better readability and maintainability.
- Collaborated with designers to implement pixel-perfect UI layouts using XML and style resources.
- Improved data handling logic by restructuring JSON parsing and validation, reducing runtime parsing errors.
- Handled device compatibility issues across different Android versions and screen sizes.
- Participated in debugging sessions and production issue fixes, gaining strong troubleshooting expertise.

## Microsoft

**Software Developer Intern** | *July 2012 – December 2012*

- Assisted in Android application development using **Java (7–8)**, focusing on feature implementation and bug fixing tasks.
- Worked on UI improvements and minor feature enhancements under senior developer guidance.
- Debugged issues related to layout rendering and API integration, improving early-stage product stability.
- Gained foundational experience in Android lifecycle, activity management, and mobile architecture patterns.
- Contributed to testing and validation processes, ensuring smoother application releases.
- Supported documentation and code reviews, improving understanding of professional development workflows.

## Education

---

**Florida State University**

**Bachelor's Degree in Computer Science** | 2008 – 2012
