Professional Summary

Senior Software Engineer with 10+ years delivering scalable web platforms across **enterprise SaaS and cloud-driven product engineering**, specializing in **Angular (v8–16)** frontend architectures and **PHP (v5.6–8.x, Laravel 5–10, Symfony 3–6)** backend systems within high-availability environments. Proven expertise designing resilient APIs, modernizing legacy monoliths into modular services, and improving performance, reliability, and developer velocity through CI/CD, observability, and secure coding practices. Strong focus on solving production issues, implementing new features, and driving migrations that enhance system stability by 30%+.

Technical Skills

- **Frontend — Angular (v8–16)**, TypeScript, JavaScript (ES6+), HTML5, CSS3, RxJS, NgRx, SPA Architecture, Component Design
- **Backend & APIs — PHP (v5.6–8.x), Laravel (v5–10), Symfony (v3–6)**, REST APIs, GraphQL basics, Authentication (JWT, OAuth2), RBAC
- **Data, Messaging & Search — PostgreSQL, MySQL, SQL Server, Redis, MongoDB, RabbitMQ, Kafka, Elasticsearch**
- **Cloud & DevOps — AWS (EC2, S3, RDS, Lambda), Azure, Docker, Kubernetes, CI/CD (GitHub Actions, Jenkins), Nginx**
- **Observability, Quality & Security — OpenTelemetry basics, Prometheus, Grafana, ELK Stack, PHPUnit, Cypress, API testing, OWASP practices**

Professional Experience

Viaro Networks Inc.

Senior Software Engineer | *January 2021 – December 2025*

- Led modernization of enterprise SaaS platform using **Angular (v12–16)** and **PHP (v7.4–8.2, Laravel 8–10)**, refactoring legacy modules into modular services which improved maintainability and reduced production defects by **32%** across high-traffic user workflows.
- Resolved critical issue where concurrent API requests caused inconsistent financial data by implementing **idempotency controls and database constraints**, stabilizing transactions and reducing data inconsistency incidents by **41%**.
- Migrated legacy monolithic backend built on older **PHP 5.x** patterns into structured Laravel services with clear domain boundaries, improving deployment efficiency and reducing onboarding complexity for new developers.
- Implemented advanced **Angular state management (NgRx)** to handle complex UI interactions, eliminating redundant API calls and improving frontend responsiveness by **28%** under heavy user load.
- Introduced **background job processing with Redis queues**, solving blocking operations in report generation and improving processing speed for large datasets by **35%**.
- Designed secure authentication flows using **JWT and RBAC**, aligning frontend route guards with backend authorization to prevent unauthorized access and improve system security posture.

- Diagnosed and fixed memory leak issues caused by unoptimized caching strategies in backend services, stabilizing long-running processes and reducing server crashes by **25%**.
- Built reusable Angular component libraries that standardized UI patterns and reduced development time for new features by **22%** across multiple teams.
- Improved API reliability by introducing structured logging and monitoring with **ELK and Prometheus**, enabling faster root cause analysis and reducing incident resolution time by **40%**.
- Led migration of deployment pipelines to containerized environments using **Docker and Kubernetes**, improving release consistency and reducing deployment failures significantly.
- Optimized SQL queries and indexing strategies across PostgreSQL databases, reducing average query execution time by **37%** on critical reporting endpoints.
- Collaborated cross-functionally to design and deliver new feature modules including real-time dashboards and analytics tools, increasing user engagement and feature adoption by **26%**.

VividCloud

Software Engineer | January 2016 – December 2020

- Developed scalable business applications using **Angular (v8–12)** and **PHP (v7.0–7.4, Symfony 3–5)**, delivering reliable internal tools that streamlined operational workflows and improved system usability.
- Fixed recurring issue where long-running API calls caused UI freezes by introducing **asynchronous processing and loading state management**, improving user experience significantly.
- Implemented RESTful APIs with structured validation and error handling, reducing frontend integration issues and improving API consistency across services.
- Migrated legacy Symfony modules to modern architecture patterns with service-based design, improving maintainability and reducing technical debt across the codebase.
- Enhanced frontend performance by implementing lazy loading and code splitting in Angular, reducing initial load times by **30%** for complex dashboards.
- Developed reusable backend services for reporting and data aggregation, improving consistency and reducing duplication across multiple modules.
- Introduced caching strategies using **Redis**, improving response times for frequently accessed endpoints by **33%**.
- Built role-based UI components aligned with backend authorization, reducing user confusion and support tickets related to access control issues.
- Resolved data inconsistency bugs caused by improper joins and aggregation logic, restoring accuracy in reporting systems and improving stakeholder trust.
- Improved CI/CD workflows by automating build and deployment processes, reducing manual errors and speeding up release cycles by **24%**.
- Collaborated on new feature development including analytics dashboards and export systems, improving operational efficiency for internal users.

Minimalist Moon

Software Developer | January 2013 – December 2015

- Built web applications using **PHP (v5.6–7.2, Laravel 4–5)** and early Angular versions, focusing on delivering stable backend systems and simple interactive frontend components.
- Implemented CRUD modules, validation logic, and business workflows that supported daily operations and reduced manual processing errors across teams.
- Fixed issue where session locking caused duplicate submissions by moving heavy operations to background processes and improving request handling.
- Optimized SQL queries and added indexing to improve performance of frequently used pages, reducing load times by **29%**.
- Developed CSV import/export tools with validation and error handling, improving data accuracy and reducing manual correction effort by **21%**.

- Added audit logging for sensitive data changes, enabling better traceability and faster debugging of production issues.
- Improved codebase structure by refactoring legacy scripts into organized MVC patterns, increasing maintainability and developer productivity.
- Collaborated on frontend enhancements using AngularJS patterns, gradually improving UI responsiveness without disrupting existing workflows.
- Resolved bugs related to inconsistent business logic across modules by standardizing validation rules and service behavior.
- Supported deployment and environment setup improvements, reducing setup time for new developers and improving team efficiency.

Microsoft

Software Developer Intern | *July 2012 – December 2012*

- Contributed to internal web tools using early **PHP and JavaScript frameworks**, supporting development of backend services and UI components for internal teams.
- Assisted in debugging production issues by analyzing logs and reproducing edge cases, helping improve system stability and reduce recurring defects.
- Implemented small feature enhancements and bug fixes under guidance, gaining experience in structured development and code review processes.
- Supported database query optimization efforts, improving performance of internal reporting tools used by engineering teams.
- Collaborated with senior engineers to understand scalable system design principles and secure coding practices.
- Participated in testing and validation processes, ensuring reliability of deployed features and minimizing regressions.
- Contributed to documentation and knowledge sharing, improving onboarding experience for future interns and junior developers.
- Learned best practices in version control, CI workflows, and collaborative development within a large-scale engineering environment.
- Assisted in improving UI behavior and fixing minor frontend issues, enhancing usability of internal tools.

Education

Florida State University

Bachelor's Degree in Computer Science | 2008 – 2012
