Professional Summary

Senior Software Engineer specializing in **Angular (v10–v18)** frontend architecture within SaaS and enterprise web application industry, delivering high-performance UI systems using **TypeScript, RxJS**, and scalable component-driven design while optimizing rendering performance, resolving complex state management issues, and modernizing legacy AngularJS platforms into reactive, maintainable ecosystems with measurable UX improvements and production reliability exceeding **35% efficiency gains** across distributed teams.

Technical Skills

- **Frontend: Angular (v10–v18)**, AngularJS, TypeScript, JavaScript (ES6+), RxJS, NgRx, HTML5, CSS3, SCSS, Tailwind CSS, Bootstrap
- **Backend & APIs:** REST APIs, GraphQL integration, Node.js (support collaboration), Express
- **Data & State:** NgRx Store, RxJS Observables, Redux patterns, LocalStorage, IndexedDB
- **Cloud & DevOps:** AWS (S3, CloudFront, API Gateway), Azure App Services, Docker, CI/CD pipelines, GitHub Actions
- **Observability / Quality / Security:** Jest, Karma, Cypress, Playwright, ESLint, Prettier, OAuth2, JWT, RBAC, Sentry, Logging

Professional Experience

Viario Networks Inc.

Senior Software Engineer | January 2021 – December 2025

- Led development of enterprise-scale **Angular (v14–v18)** frontend systems for SaaS platforms, implementing modular architecture with reusable components that improved UI consistency and reduced feature delivery time by **32%** across multiple product teams.
- Architected advanced **state management using NgRx and RxJS**, resolving race conditions and memory leaks caused by improper subscription handling, significantly improving application stability under high user concurrency.
- Migrated legacy **AngularJS applications to modern Angular**, redesigning module structure and routing strategy while preserving business logic, reducing technical debt and improving performance metrics by **40%**.
- Diagnosed and fixed critical UI freeze issues caused by excessive change detection cycles, applying **OnPush strategy and memoization**, resulting in smoother rendering and improved responsiveness.
- Implemented lazy loading and route-level code splitting, optimizing bundle size and improving initial load performance by **38%** across customer-facing dashboards.
- Integrated secure authentication flows using **OAuth2 and JWT**, ensuring protected routes and role-based access control for enterprise-level authorization requirements.
- Collaborated with backend teams to optimize API consumption patterns, introducing request caching and retry mechanisms that reduced redundant API calls by **27%**.

- Developed real-time dashboards using WebSocket integrations and reactive streams, ensuring seamless data updates without full page refresh.
- Resolved production bugs related to inconsistent state synchronization across components by implementing centralized store patterns and strict typing validation.
- Introduced component testing strategies using **Jest and Cypress**, improving test coverage and reducing regression defects in production releases.
- Optimized CSS rendering and layout issues across browsers using SCSS architecture and responsive design patterns, improving cross-device compatibility.
- Led frontend CI/CD improvements, integrating automated linting, testing, and build validation pipelines to ensure consistent deployment quality.

VividCloud

Software Engineer | January 2016 – December 2020

- Developed scalable frontend applications using **Angular (v8–v13)** and TypeScript, building reusable UI components that standardized design systems across multiple business applications.
- Implemented dynamic forms and validation systems using reactive forms, resolving data inconsistency bugs that previously caused frequent submission errors.
- Upgraded applications from earlier Angular versions to newer frameworks, addressing breaking changes and dependency conflicts while ensuring backward compatibility.
- Improved performance by refactoring heavy DOM manipulation logic into optimized Angular directives and pipes, reducing rendering delays by **30%**.
- Integrated REST APIs with efficient error handling and retry logic, improving frontend resilience against intermittent backend failures.
- Fixed memory leaks caused by unhandled subscriptions using proper lifecycle hooks and RxJS operators, significantly enhancing long-session stability.
- Designed dashboard features with complex filtering and sorting logic, improving user interaction efficiency and reducing manual data processing effort.
- Collaborated with UX teams to implement responsive layouts and accessibility improvements aligned with WCAG standards.
- Enhanced application security by implementing route guards and input sanitization, reducing vulnerability exposure in client-side logic.
- Built automated test suites using Karma and Jasmine, increasing confidence in feature releases and reducing production defects.

Minimalist Moon

Software Developer | January 2013 – December 2015

- Built early-stage web applications using **AngularJS and Angular (v2–v6)**, focusing on delivering functional UI components aligned with evolving frontend frameworks.
- Developed reusable directives and services to standardize code patterns, improving maintainability across multiple projects.
- Resolved critical bugs related to two-way data binding inconsistencies, improving data accuracy across user workflows.
- Implemented REST API integrations and structured frontend services, enabling scalable communication between UI and backend systems.
- Optimized page load performance by minimizing unnecessary watchers in AngularJS, significantly improving responsiveness.
- Contributed to migration planning from AngularJS to Angular, preparing codebases for modern frontend architecture transitions.
- Designed user-friendly interfaces using HTML, CSS, and early responsive design techniques, improving usability across devices.
- Worked closely with backend developers to align API contracts and ensure smooth frontend integration.

- Implemented basic authentication flows and session handling, improving user security and access control.
- Assisted in debugging production issues and deploying fixes in fast-paced development cycles.

Microsoft

Software Developer Intern | *July 2012 – December 2012*

- Assisted in building frontend modules using early JavaScript frameworks and structured UI patterns, gaining foundational experience in scalable frontend engineering.
- Developed small UI components and fixed bugs related to layout inconsistencies and browser compatibility issues.
- Supported debugging efforts for production issues, identifying root causes and contributing to stable releases.
- Worked with senior engineers to understand frontend architecture and best practices in large-scale applications.
- Implemented basic data-binding logic and UI interactions, improving user experience in internal tools.
- Participated in code reviews and learned structured coding standards for maintainable frontend systems.
- Collaborated in agile teams using ticketing systems and version control workflows.
- Contributed to UI testing and validation processes to ensure reliable feature delivery.

Education

Florida State University

Bachelor's Degree in Computer Science | 2008 – 2012
