

CRISTOFF STAN

Senior Software Engineer

Location: Tallinn, Harjumaa, Estonia | Email: cristoffstan@gmail.com
LinkedIn: <https://www.linkedin.com/in/cristoff-stan-b53490362/> | Phone Number: +372 58619311

PROFESSIONAL SUMMARY

Versatile and results-driven Senior Software Developer with over 9 years of hands-on experience designing and developing scalable full-stack web applications. Specializes in .NET (C#), Angular, SQL/NoSQL databases, and microservices architecture. Adept in building high-performance backend services, integrating messaging systems like RabbitMQ, and working with Docker and CI/CD pipelines. Experienced in cross-functional team collaboration, agile delivery, and modern software testing practices. Passionate about continuous improvement and engineering excellence.

TECHNICAL SKILLS

- **Backend:** .NET 8, .NET Core, C#, ASP.NET, Entity Framework Core
- **Frontend:** Angular, TypeScript, HTML5, CSS3, RxJS
- **Messaging:** RabbitMQ, Kafka (basic)
- **Database:** MSSQL Server, PostgreSQL, MongoDB, Redis
- **Cloud & DevOps:** AWS, GCP, Docker, Kubernetes, GitHub Actions, GitLab CI
- **Testing:** xUnit, NUnit, Cypress, Playwright, Jest, Moq
- **Architecture:** Microservices, REST APIs, Domain-Driven Design, CQRS
- **Other:** Python (for automation/scripting), NoSQL design, Git, Jira, Agile, Scrum

WORK EXPERIENCE

Senior Software Engineer

Sensidev

September 2021 – December 2024

Timișoara, Romania (Remote)

- Led development of a distributed microservice-based platform using .NET Core 6/7 and RabbitMQ, optimizing throughput and improving response latency by 28% across services.
- Designed and deployed secure RESTful APIs for internal tools and external integrations, applying domain-driven design and SOLID principles.
- Implemented high-performance Angular components with complex state management, resulting in 35% faster UI interactions for end-users.
- Maintained and extended NoSQL databases (MongoDB, Redis) to support high-speed caching and audit trail logs for internal monitoring tools.
- Integrated CI/CD pipelines using GitLab CI and Docker to automate builds, tests, and deployments across dev, staging, and production environments.

- Authored unit and integration test suites (xUnit, Moq, Cypress) ensuring 90%+ code coverage and decreasing production bugs by 42%.
- Orchestrated containerized applications using Docker and Kubernetes, enhancing infrastructure portability and scaling capabilities.
- Mentored junior developers and conducted code reviews to foster team growth and enforce high-quality coding standards.

Software Engineer

Syscom Digital

October 2019 – August 2021

Bucharest, Romania (Remote)

- Developed modular backend services using .NET Core 3.1 and Entity Framework Core, managing high volumes of client data across multiple domains.
- Created dynamic user interfaces with Angular 9 and integrated them with custom backend APIs, improving form completion times by 20%.
- Built and managed messaging queues using RabbitMQ to ensure reliable communication between services, especially for job scheduling and event notifications.
- Tuned SQL Server stored procedures and indexes, leading to over 50% faster query execution and reduced DB deadlocks.
- Led the migration of legacy monolith to microservice architecture, isolating bounded contexts and improving maintainability.
- Implemented end-to-end testing pipelines with Cypress and Playwright to simulate real-world user behavior and enhance QA accuracy.
- Automated deployment processes using Docker and GitHub Actions for consistent and error-free release cycles.
- Collaborated with cross-functional stakeholders to gather requirements and translate them into scalable architecture and tech specs.

Software Developer

Soft Build

June 2016 – July 2019

Timișoara, Romania (Remote)

- Developed a CRM platform backend in ASP.NET MVC with C#, integrating it with external APIs and enabling robust role-based access control.
- Built responsive frontend pages with AngularJS and Bootstrap, ensuring cross-browser compatibility and 100% accessibility compliance.
- Refactored core services to use async/await patterns and reduce blocking IO, resulting in 33% improvement in throughput.
- Managed and maintained MS SQL Server schemas, triggers, and stored procedures while improving database normalization and consistency.
- Collaborated with QA team to create automation test plans and CI validation hooks in Jenkins and Git.
- Implemented granular logging and monitoring strategies with ELK stack to track real-time system anomalies.
- Introduced static code analysis tools like SonarQube to monitor code quality metrics and reduce technical debt.
- Participated in daily standups and biweekly sprint demos, adhering to Agile practices and promoting knowledge-sharing across teams.

Software Developer

Decima Digital

November 2015 – April 2016

Tallinn, Estonia

- Delivered internal dashboards for analytics teams using Angular and REST APIs backed by ASP.NET Web API 2.
- Developed and deployed microservices in .NET for inventory and supply chain systems, reducing data duplication and inconsistencies.
- Designed JSON-based APIs and secured them with token-based auth using OAuth 2.0.
- Tuned Entity Framework performance via raw SQL commands for high-traffic queries, reducing overall API load time.
- Collaborated closely with frontend engineers to align RESTful contract definitions and UI feedback flows.
- Deployed and managed containerized services using Docker Compose in UAT/staging environments.
- Wrote detailed documentation on new feature modules and architectural decisions for internal engineering wiki.
- Supported release planning and sprint grooming by estimating feature complexity and interdependencies.

Software Developer Intern

Borna Technology

September 2014 – August 2015

Tallinn, Estonia (On-Site)

- Assisted with development of ASP.NET MVC web modules and admin interfaces for an IoT-based analytics platform.
- Created AngularJS widgets for dashboards showing real-time sensor data streams.
- Built basic ETL scripts in Python for data cleansing and warehouse seeding.
- Wrote SQL scripts for report generation and dashboard KPIs for business users.
- Participated in testing and validation using Selenium and unit test frameworks.
- Developed REST APIs with ASP.NET Web API for integration with third-party partners.
- Researched NoSQL alternatives like MongoDB and integrated a proof-of-concept module into the analytics stack.
- Worked alongside senior engineers to improve SDLC practices and code versioning across Git branches.

EDUCATION

Tallinn University

Bachelor's Degree in Computer Science,

2010 – 2014

CERTIFICATIONS

- ❖ Microsoft Certified: Azure Developer Associate (2023)
- ❖ AWS Certified Developer – Associate (2022)
- ❖ Google Cloud Certified: Associate Cloud Engineer (2022)
- ❖ MongoDB for Developers by MongoDB University (2021)

PROJECTS

SSD Firmware Validation Platform

- Full-stack platform for SSD testing, analysis, and benchmarking. Designed using .NET 8 for backend and Angular 16 for frontend.
- Developed messaging workflows with RabbitMQ to monitor firmware operations and report live diagnostics.
- Integrated MongoDB for storing unstructured performance logs alongside PostgreSQL for test metadata.
- Implemented CI/CD using Docker, GitHub Actions, and Kubernetes deployments on AWS EKS.

Microservices-Based CRM Tool

- Scalable CRM built from the ground up using .NET Core, Angular, and microservice patterns.
- Handled user onboarding, permissions, auditing, and notifications through asynchronous queues.
- Focused on modular codebases, testability, and distributed logging to enhance debugging and observability.
